

Appendix G-2 Map of Downstream Stabilization Standard Watershed and Streams

Notes to User: New developments and redevelopments located in areas subject to the Downstream Stabilization Standard may be exempt with approval of the governing authority. Example of possible exemption: Proposed site discharges to a regional stormwater management facility that provides sufficient downstream control for the 1-yr storm event. Refer to the Stormwater Manual for further clarification and adopted policies.

Those areas shown as not being subject to the Downstream Stabilization Standard are basins determined to have adequate capacity to convey the 1-yr storm event without causing significant downstream concerns, or are areas that are fully served by stormwater drainage systems.

This map is intended to supplement the City of Wichita/Sedgwick County Stormwater Manual and shall be used as a guide and not considered absolute.
