Addendum #2

Some questions suggest clarification is needed concerning the server list provided in Addendum 1, Attachment "B": Please acknowledge receipt of this addendum on your Response Form.

1. Referencing that list, the following servers have multiple processors (the remainder are single processors):

Server#	#CPUs	Comments
1	2	
2	2	
9	2	
16	4	
17	2	
23	4	
33	2	33 & 34 are clustered
34	2	
66	2	
67	2	66 & 67 are clustered
72	4	
81	2	
82	2	
84	2	
85	2	

2. **Database Engine column:** Oracle should be considered to be version 9.
3. **SAN column** and the designations at the bottom of the page:
 - a. "1 – Currently on SAN" – this indicates the server is currently using the Dell PowerVault 630/650 SAN. These servers (with one exception) support the SAP application.
 - b. "2 – PowerVault" – this indicates the server is using external SCSI disk storage, Dell 200 series.
 - c. "3 – should be on SAN" – this indicates, in our opinion, a server that would be a priority candidate for SAN migration. Other servers may still be considered for migration; at some point we would like to have all servers using the SAN.
