**Request for Bid  
#06-0144  
ONE TON TWO-WHEEL DRIVE CHASSIS-DUMP BED TRUCK  
ADDENDUM #1**

December 13, 2006

The following questions were received regarding this Request for Bid. Questions are italicized and answers are bolded.

**You must acknowledge receipt of this addendum on your response form.**

1. *Would it be possible to change the diesel engine to 6.4L, and delete V8, so I can spec Ford or Dodge? You may submit the 6.4L engine and note it on your document as an exception and we will consider both options.*
2. *How many lights do you want in the CODE 3 Strobe System? Due to the small nature of this body, there is only room for one light per rear corner post. There are several CODE 3 DOT Strobe Systems. Two lights need to go on the rear preferably near the tail lights and one light mounted on the headache rack of the dump bed on the drivers side not in the center*
3. *Are you planning to do any tailgating with this unit? A PTO on one ton truck will automatically throttle the engine when you engage them and the PTO will slip when you apply the brakes. An under-hood clutch pump often times works better for certain applications. A PTO system coming off of the transmission is preferred, but either type may be submitted as options. Please state how the system that is bid operates.*
