REGIONAL FORENSIC
SCIENCE CENTER

Timothy P. Rohrig, Ph.D. Director
Jaime L. Oeberst, M.D. District Coroner-Chief Medical Examiner
HISTORY/OVERVIEW

The Regional Forensic Science Center officially opened on December 21st, 1995. The Center houses the Pathology Division (including the Office of the District Coroner) and the Forensic Science Laboratories. The Pathology Division is organized into three sections: Pathology Administration, Medical Investigations and the Autopsy Service.

As mandated by law, the District Coroner has the responsibility for investigating deaths within Sedgwick County that are a result of violence, unlawful means, suddenly when in apparent health, not regularly attended by a physician, any suspicious or unusual manner, when in police custody, or when the determination of the cause of death is held to be in the public interest. The primary goal of investigation and the postmortem examination is to determine cause and manner of death in order to generate a death certificate.

Cause of death is the injury or disease that results in death. Manner of death is determined by circumstances in which the death occurred and includes natural, accidental, homicide, suicide, and undetermined. Undetermined manner of death is used when circumstances are unknown or are unclear.

Over the last decade, the number of cases reported annually to the office has averaged 3,003, with a steady increase year after year. There has been greater than a one and half fold increase in the number of reported cases and approximately a two and half fold increase in the number of required examinations and medical records review since 1998.

The Pathology Division has been accredited by the National Association of Medical Examiners (NAME) since 2001.

PATHOLOGY LEADERSHIP

District Coroner-Chief Medical Examiner
Jaime L. Oeberst, M.D.

Chief Medical Investigator
Shari L. Beck, F-ABMDI
SIGNIFICANT ACHIEVEMENTS

Jaime L. Oeberst, M.D., District Coroner/Chief Medical Examiner, continues to serve as a member of the State Child Death Review Board.

Timothy Gorrill, M.D., Ph.D., Deputy District Coroner/Medical Examiner, became board certified in Forensic Pathology by the American Board of Pathology, September 3, 2014.

The Pathology Division continues to be accredited by the National Association of Medical Examiners.

COUNTIES SERVED

In 2014 [Figure 1], the majority of service provided was for Sedgwick County; however, the Center does provide on a fee for service basis, autopsy examinations for many of the counties in the southcentral regional of the state.

![Figure 1](image)

Figure 1 The Pathology Division provided service to Sedgwick County and 19 other counties in the state of Kansas.

DISTRIBUTION OF CASES: IN-COUNTY VS OUT-OF-COUNTY

The Pathology Division serves as a resource to other counties in the state of Kansas. In 2014, 29% of the examinations were performed for other counties [Figure 2]. In-County cases have shown a rise over the last 10 years.

![Figure 2](image)

Figure 2 Examinations include Full and Partial Autopsies, External Examination, Non-human Skeletal Remains, and Records Reviews.
**MEDICAL INVESTIGATIONS**

The Pathology division has a Chief Medical Investigator and four Medical Investigators. The Medical Investigators are on duty year round, twenty-four hours a day, seven days a week. The Medical Investigator serves as the “eyes” and “ears” of the Coroner. The investigators triaged 3267 reported deaths. The District Coroner accepted jurisdiction or assisted in 904 cases [Figure 3] of the reported deaths. On average, over the last 10 years, accepted cases constitute 26% of the total number reported to the office.

**Figure 3** Records Reviews, Autopsies, Partial Autopsies, External Examinations, and Non-human Skeletal Remains.

Medical Investigators may attend the scene of a death when it occurs outside of a hospital setting. Pertinent circumstantial and physical observations are documented and photographed, and items of evidence are collected in accordance with state law, good forensic principles and accreditation requirements established by the National Association of Medical Examiners [NAME]. The number of scene investigations by Medical Investigators per year [Figure 4] has shown a steady increase over the last 10 years.

**INDIGENT BURIALS and Cremations**

Pursuant to K.S.A. 22a-215, Sedgwick County is required to decently bury/cremate the bodies of unclaimed deceased persons. In accordance with this statute, a procedure has been established by the Center to facilitate the necessary arrangements regarding indigent burials/cremations. The Center maintains a contract with a local mortuary to handle the disposition of the remains.

Following notification of an indigent/unclaimed decedent, it becomes the responsibility of the Medical Investigations section to perform a diligent search for a family member or concerned party willing to claim the decedent. The following provisions accompany a claim; 1) When any
family member or concerned party wishes to make any decision regarding burial arrangement, he/she must “claim” the body thereby assuming all responsibility for the provision of a burial, and 2) Sedgwick County will not be a guarantor of burial expenses for any body that has been claimed by a family member or concerned party.

After a diligent search, the District Coroner is charged with the responsibility for disposition of the decedent remains. Since 2004, there had been a significant increase in the number of unclaimed bodies [Figure 5]. In 2014, 22 bodies remained unclaimed / indigent.

**CASE SUBMISSIONS**

In 2014, 3267 deaths from Sedgwick County and referring counties were reported. For Sedgwick County deaths, analysis of the scene, circumstances of the death and the decedent’s medical history were key factors in determining coroner’s jurisdiction. Coroner’s jurisdiction for the referring counties was determined by the referring county Coroner. Jurisdiction was assumed or assistance was provided in 892 cases, of which 620 were complete autopsies. Figure 6 shows the number of postmortem exams, that includes full autopsies, partial autopsies, and external examinations. External examinations are performed in cases where scene investigation, circumstances, and medical history and the exam are sufficient to certify the death.

The District Coroner also performed postmortem examinations for other counties within the state of Kansas [See Figure 2].

**Figure 5** Number of Indigent Burials that the Center took responsibility.

**Figure 6** Until 2007, only the total number of examinations was tracked. Since 2005, there has been a 28% increase in the number of Postmortem Examinations.
CREMATION PERMITS

In the state of Kansas, the Coroner is also charged with the investigation of death if the body is to be cremated. The investigation involves confirmation that the death certificate is appropriately executed, and that no further circumstances exist which may have contributed to the death. This may involve interviews with medical personnel, families or other interested parties, and/or a review of medical records. If the cause of death is unclear or falls under the jurisdiction of the Coroner, a postmortem examination and issuance of a revised death certificate may be required. Figure 7 illustrates the steady increase of cremation permits signed by the Coroner.

![Cremation Permits Graph]

Figure 7  The number of cremation permits is steadily increasing year after year.

TISSUE DONATIONS

The Pathology Division works in cooperation with procurement agencies to facilitate organ and tissue donation in cases where the death falls under the jurisdiction of the coroner.

![Donors Graph]

Figure 8  *Drop in number for 2010 is a reflection of inability to track numbers due to lack of in-house procurement associated with remodeling of the tissue suite.
MANNER OF DEATH

In addition to determining cause of death, the District Coroner is responsible for determining the manner of death. Figure 9 shows the breakdown of the deaths by manner. Homicides are deaths that result from injuries that are a result of the actions by another person. Homicides constituted 4% of the cases for 2014. The majority (70%) of these deaths resulted from gunshot wounds [Figure 10]. Suicides are defined as deaths that result from a purposeful action to end one’s own life. In 2014, 13% of the cases were certified as suicides. Deaths that were certified as accidents are those that result from an unintentional event or chain of events. This category includes most motor vehicle accidents, falls, and accidental drug overdoses. Natural deaths are those that are solely caused by natural disease and constituted 30% of the cases. The most common cause of death in cases of sudden, unexpected natural death is coronary artery disease. Cases that were classified as an undetermined manner of death constituted 8% of the total caseload.

Figure 9  Accidental deaths was the leading percentage of manner of death reported to the Center.

Figure 10  Firearms are utilized the greatest percentage of the time in homicides.
Figure 11  Unrestrained drivers and passengers account for the largest percentage of MVA deaths.

Figure 12  MVA deaths account for 16% of all accidental deaths.

Figure 13  Ethanol / Drug Toxicity is the leading cause of non-natural deaths.
SUICIDES

In 2014, 113 cases were certified as suicide. The vast majority of suicides were white male adults [Figure 14, Figure 15, and Figure 16].

Figure 14  Males commit the greatest percentage of suicides.

Figure 15  The race that commits the greatest percentage of suicides is White, with Asians being the lowest percentage reported.

Figure 16  Males in general and white males in particular commit the greatest percentage of suicides.
Figure 17  Most suicides are committed by people between the ages of 40 and 59.

In 2014, the predominate suicide methods were firearms, hanging, and drug related deaths.

Figure 18  Most suicides are committed by the use of a firearm.

TOXICOLOGY

In 2014, there were 867 cases in which specimens were collected for toxicological analyses. Not all cases require toxicological analyses [Fig. 18]; the majority of these are associated with extended hospital stays following the initial event.

Figure 19  Of the cases toxicological examination was performed, alcohol was detected [>0.02gm %] in 22% of the tested cases. Drugs were detected in 40% of the cases.
