<tr>
<td>1. Parking</td>
<td>The slope of the accessible vehicle parking spaces and access aisle is too steep at intervals.</td>
<td>4.6.3</td>
<td>The surface slope of accessible parking spaces and access aisles is generally beyond 2% and measures over 3.5% at intervals due to asphalt depressions. ADAAG requires accessible parking spaces and access aisles to have surface slopes that do not exceed 2%. Modify the existing accessible parking spaces or create other accessible parking at another location, which is still on the shortest path of travel to accessible entrances.</td>
<td>L L M N</td>
<td>$1,000 (See Building Block 1 – Accessible Parking, for greater clarification).</td>
<td></td>
</tr>
<tr>
<td>2. Parking</td>
<td>Existing upright signs that designate accessible parking spaces, are too low and van accessible signage does not exist.</td>
<td>4.1.3 5(b) 4.6.4</td>
<td>ADAAG requires accessible parking spaces to be located in each parking lot. Accessible parking spaces are required to have upright signage that includes the symbol of accessibility and van accessible signage where required. Such signs are required to be located so they can be seen with a vehicle parked in the space. This requirement can generally be adhered to with the sign mounted at 5-feet high measured to the bottom of the lowest sign. Provide upright signage in front of each existing accessible vehicle parking space, which complies with ADAAG specifications, including van accessible signage</td>
<td>L L M 5</td>
<td>$450 (See Building Block 1 – Accessible Parking, for greater clarification).</td>
<td></td>
</tr>
<tr>
<td>3. Exterior – Pedestrian Paths of Travel</td>
<td>Curb ramps, which lead from the street level to the sidewalk level, have very steep cross slopes and do not provide an appropriate detectable warning surface.</td>
<td>4.7.2 4.3.7</td>
<td>Since these curb ramps lead to a cross vehicular traffic way, the necessity of detectable warning surface is magnified. The existing curb cut has a detectable warning surface. However, this detectable warning does not comply with current ADAAG specifications regarding truncated domes. In addition, according to ADAAG, nowhere shall the cross slope of an accessible route exceed 1:50. At the existing curb ramps cross slopes exceed 9%. Modify all existing curb cuts to comply with ADAAG specifications pertaining to a detectable warning surface.</td>
<td>M L M</td>
<td>$3,000 See Building Block 5 – Curb Ramps, for more information</td>
<td></td>

<tr>
<td>4. Exterior – Pedestrian Paths of Travel</td>
<td>An extreme change in level exists at the bottom of the curb ramp, located in front of the main public entrance door, due the street level slope.</td>
<td>4.7.2</td>
<td>According to ADAAG, the maximum slopes of adjoining gutters, road surface immediately adjacent to the curb ramp, or accessible route shall not exceed 1:20. The existing adjoining road surface measures over 7%. Modify the bottom of the curb ramp to comply with ADAAG specifications.</td>
<td>M L M 7 1</td>
<td>$1,000 See Building Block 5 – Curb Ramps, for more information</td>
<td></td>
</tr>
<tr>
<td>5. Exterior – Pedestrian Paths of Travel</td>
<td>The side flares of the curb ramp, located in front of the main public entrance, are very steep.</td>
<td>4.7</td>
<td>ADAAG requires side flares on curb ramps to be a maximum slope of 1:10. The existing side flares have more than a 19% slope. Modify the existing ramp to comply with ADAAG specifications.</td>
<td>M L M 1 0</td>
<td>$2,000 See Building Block 5 – Curb Ramps for additional ADAAG specifications.</td>
<td></td>
</tr>
<tr>
<td>6. Exterior – Pedestrian Paths of Travel</td>
<td>The curb ramp, located in front of the main public entrance, does not provide an appropriate detectable warning surface.</td>
<td>4.7.7</td>
<td>Since these curb ramps lead to a cross vehicular traffic way, the necessity of detectable warning surface is magnified. The existing curb cut has a detectable warning surface. However, this detectable warning does not comply with current ADAAG specifications regarding truncated domes. Modify the existing curb cut to comply with ADAAG specifications pertaining to a detectable warning surface.</td>
<td>M L M 1 0</td>
<td>$250 See Building Block 5 – Curb Ramps, for more information</td>
<td></td>
</tr>
<tr>
<td>7. Exterior – Pedestrian Paths of Travel</td>
<td>The ramp, leading to the main public entrance, has a steep running slope and the handrails do not extend beyond the top and the bottom of the ramp surface.</td>
<td>4.8</td>
<td>The slope of the existing ramp is steeper (over 10%) than ADAAG’s maximum of 8.33%. In addition, ADAAG specifies that accessible routes with running slopes greater than 5% provide handrails on each side. In addition, the handrails do not extend at the top and bottom. Modify the existing ramp to comply with ADAAG specifications.</td>
<td>V L M 1 2</td>
<td>$5,000 See Building Block 3 – Ramps, for more information</td>

<p>| Location      | Identified Issue                                                                 | ADAAG Specifications | Recommended Correction                                                                 | Priority (overall) | Public Access | Frequency - PWD | Conceptual Costs | Support Information | Finalized Correction | Date to be Corrected | Date Completed (include initial) |
|---------------|----------------------------------------------------------------------------------|----------------------|---------------------------------------------------------------------------------------|--------------------|---------------|-----------------|------------------|----------------------|------------------------|-----------------------|
| 19. Interior - General | Some interior doorways are too narrow and do not provide appropriate maneuvering space on the pull latch sides. | 4.13 | Doors, leading to accessible facilities, are required to have a minimum clear opening of at least 32-inches measured with the door open 90-degrees. ADAAG requires at least 18-inches to the latch pull side of public doors. Modify interior doors to comply with ADAAG specifications or ensure appropriate services can be provided when necessary in fully accessible and equivalent areas. | M                  | L             | M               | $0               | See Building Block 8 – Accessible Doors for additional information |                      |                       |
| 20. Restrooms | All public restrooms (3 total – 2 on the first floor and 1 on the third floor) are totally inaccessible due to numerous inconsistencies. | 4.23 | Inconsistencies include, but are not limited to, very narrow stalls, no grab bars in stalls, toilet seats too low, toilet paper dispenser wrong location, inappropriate maneuvering clearance on the interior of entrance doors, no Braille signage at entrances, pipes exposed under lavatories, no 5-foot by 5-foot turning radius in restrooms, no lowered urinal, mirrors located too high, etc. In new construction, ADAAG requires all public restrooms to be fully accessible. However, this facility is not considered new construction, and therefore falls under the program access provisions of Title II. Each and every public restroom may not need to be made accessible according to program access. We recommend making at least one fully accessible unisex restroom at an accessible level, which is located on an accessible path of travel with clear directional signage. | H                  | L             | M               | $15,000          | See Building Block 9 – Accessible Restrooms, for more information |                      |                       |</p>
