Health Mandates

**Comment:**

“Covid death issue is real and you have dashboard for us all, thank you. We also need a real time dashboard of the side effects caused within this community from masking the healthy and increased isolation from cancelling events and in-person school....should include real time increases (since prior year) of suicides,murders, domestic violence, depression, bacterial infection cases, closed businesses, poverty, economy meter, etc, and in comparison from 2019...this would show everyone when the cost of mandates begin to exceed benefit of covid deaths here

locally. This would be responsible and healthy for citizens here.  
Thank you.”

Fairness among business limitations

**Comment:**

“I do not believe Dr Minns order is fair among similar businesses on limitation of people. If safety is the concern then I believe my venue that has 2 events (4 hours each) left in the whole 6 week mandate time frame is safer then a bar, restaurant or night club which can be open 7 days a week for longer hours. I take the safety measures just like those businesses but yet mine is not a big business like those. 4400 sq feet will safely social distance tables with 8 seats. It's not about what category I'm in it's about the fairness of your order for smaller businesses vs large business and the ability to keep people safe for a reception. Mark Arts is having an outdoor/indoor event on December 6th again fairness and safety is my complaint.”

Masks

**Comment:**

“You are promoting descrimination against those who have a medical condition that keep some from wearing a mask. You can say that there are medical exemptions but that is not carrying over to the business. Personally, I have offered to show a note from my doctor and I am still told to get out. Just like the news report on Davis Liquor, where my picture will be put up on a wall if I continue going there where I have been a customer for years. DESCRIMINATION.”

Covid 19

**Comment:**

“My mother in law Judy Campbell was recently exposed to covid on 11/2/2020 My husband had tested positive for covid on 11/4/2020 and found on 11/6/2020 that he tested positive for covid and is asymptomatic and not having or showing any symptoms. He is going to retested Thursday before he goes back to work. We reached out to my mother in law to let her know and she told my husband and I the rules don't pertain to her. Since she has been exposed to covid she has been going into public places such as Walmart and Denny's. She knows Thanksgiving is coming up next week and told my husband last night she doesn't want to be herself for the holidays and she is not going to get tested and my husband and I have 3 year old little boy that is immune compromised and has heart problems and other health problems. We can't take any chances with him getting it my husband Benjamin Campbell and I have done everything to keep our son safe and following the guide lines. If someone can reach

out to me or give some feedback that would be greatly appreciated thanks.

Regular Meeting 11-18-20 Documents

**Comment:**

“These items were left off the public record for the meeting of 11-18-20. I have reason to believe the originals were not seen by the Commissioners.

One other comment for the Commissioners. A woman can choose to kill a baby in the womb, I should be able to choose to wear a mask.

Thanks for hearing my petition.

I request the county return to the policies of past pandemics and flu seasons. Past policies were to record those who presented themselves for treatment to doctors, clinics, and hospitals<sup>1</sup>. The past policies never created the economic harm, psychological distress, and personal destruction the current policies are producing for Covid-19. Covid-19 according to Dr. Fauci will not be eradicated and will be with us as a seasonal flu. There are several reasons to justify not using the current policies.

The political history of current policies is a sign of manipulating statistics not related to the public health of the community. Covid-19 (SARS-CoV-2) is real, just like the flu, and just like predecessor pandemics.

1. Prior to March 24, 2020 a Covid-19 medical case had to be one of Covid-19. The CDC changed the definition of what a case of Covid-19 is to include: Covid-19, probable case, and a possible case. The definition is to be retroactive and applied to future cases. This policy led to a practice of "reconciliation" or "review". This policy is where you examine a death certificate to determine if it meets the new criteria of unconfirmed Covid-19 case. What was the result?

The nation's Covid-19 death count went from 494 to 11,031 in one week<sup>3</sup>.

New York City's death count went from approximately 6,000 to over 10,000 on first review<sup>4</sup>.

KDHE participates in the program and declares the adjustments periodically. The KDHE October 26 case summary<sup>5</sup> indicates approximately 300 cases were reviewed and included in the 976 Covid-19 death cases.

You can see that Covid-19 death case count is being affected by political decisions.

2. The government made the statistical situation worse by a policy of reimbursing costs for the treatment of Covid-19 cases. There are many different kinds of expenses that can be reimbursed involving Covid-19. The economic incentives combined with loose definition of Covid-19 created a problem beyond the disease.

3. The Sedgwick County Covid-19 Dashboard indicates a misinterpretation of statistical information. Prior to August 24 the policy was to test the general population. After August 24 the tests are for symptomatic and high risk population<sup>6</sup>. I modified the dashboard to indicate the change in policy. A casual look at the dashboard would give the impression Covid-19 is getting worse without taking into account the change in policy that would produce a higher positive percentage of tests in a different type of population. The policy has changed according to KWCH on 11-2-20 to include limited testing asymptomatic persons and should decrease the percentage of positive cases being recorded..

4. The Covid-19 Summary of 11-6-20 can provide a great hope and encouragement. The positive case represent the building of "herd Immunity" with the absence of a vaccine. The majority of those cases will not need treatment or need hospitalization. The majority of those hospitalized or suffering death will have compromising

health conditions. The covid response is a choice that has not been made in past pandemics and flu seasons. We do have a choice in managing Covid-19.

Rahm Emanuel, an American politician, created a phrase "never let a crisis go to waste". The election is over. It is time to return to the people, their fortunes, their lives, and their sacred honor. Please return to the past policies that work and protect the public.

The CDC explains in an archived webpage that individual cases of H1N1 pandemic influenza were monitored early on to track the spread of the disease, but as the virus became widespread, the case counts "became an increasingly inaccurate representation of

the true burden of disease” as many people were mildly ill and did not seek treatment and the vast majority were not tested.

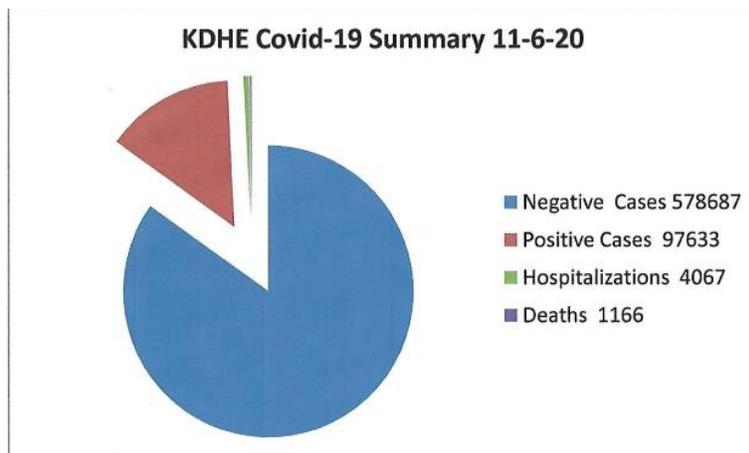

“CDC recognized early in the outbreak that once disease was widespread,” the website continues, “it would be more valuable to transition to standard surveillance systems to monitor illness, hospitalizations and deaths.”

On another webpage, the CDC says that individual case counts became “increasingly impractical and not representative of the true extent of the outbreak” because only a small proportion of patients were tested for influenza, “so the true benefit of keeping track of these numbers is questionable.”<sup>7</sup>

## 7. <https://www.factcheck.org/2020/07/trump-misleads-on-h1n1-swine-flu-testing/>

Total Positive Covid-19 Cases = 3.36% of Kansas Population 2.9 million

Is the enhanced measures, loss of income, closed businesses, and personal strife, of fighting Covid-19 worth the costs compared to the normal surveillance methods used for past pandemics and flu seasons.

"Pandemic influenza is a worldwide outbreak of disease that occurs when a new influenza A virus to which people have little or no immunity appears in humans then spreads easily from person to person"... "The prevention and treatment measures for such a virus would also be the same as for seasonal influenza."

[https://www.kdheks.gov/cphp/pan\\_flu.htm](https://www.kdheks.gov/cphp/pan_flu.htm)

Positive Cases 97,633 = 100%

Approximately 18,957 active cases based on last 14 days of KDHE summaries.

Positive cases represent nature's way of creating "herd immunity." for a new virus to protect the population long term..

Non-hospitalizations 93,566 = 95.83%

May not have sought treatment ( placed in Isolation)

Hospitalizations 4,067 = 4.16%

421 hospitalizations in last 14 days (may include dismissals from the hospital)

Deaths 1,166 = 1.19%

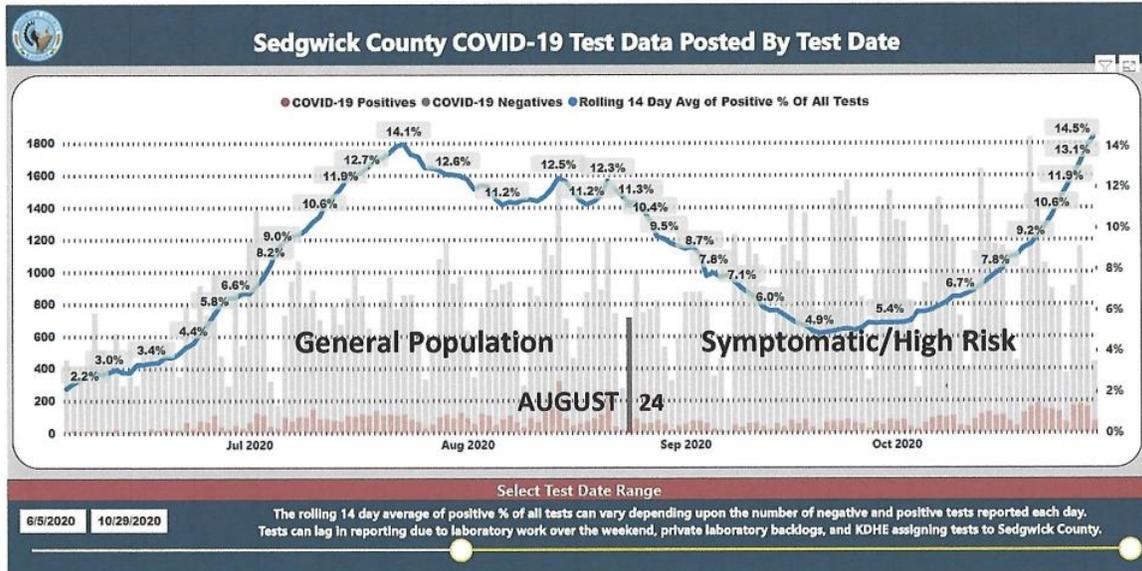

190 deaths in last 14 days (Total deaths Include approximately 300 reviewed and reconciliation cases.)

CDC posted 94% of Covid-19 deaths up to August 15 involved other health factors (co-morbidity) in the death of patients.

Negative cases 578,687 representative of the cost of Covid-19 policies as compared to using historic surveillance methods.

The CDC explains in an archived [webpage](#) that individual cases of H1N1 pandemic influenza were monitored early on to track the spread of the disease, but as the virus became widespread, the case counts "became an increasingly inaccurate representation of the true burden of disease" as many people were mildly ill and did not seek treatment and the vast majority were not tested.

"CDC recognized early in the outbreak that once disease was widespread," the website continues. "it would be more valuable to transition to standard surveillance systems to monitor illness, hospitalizations and deaths."

Modified S/G Dashboard to show a change in testing policy from testing general population policy to testing symptomatic and high risk population August 24, 2020. KWCH reported a change in policy to include limited asymptomatic testing which should help in bringing down the positive case percentage.

October is historically a time of increase cases in past pandemics and flu seasons..

**Herd immunity is developed by exposure to the virus making positive cases a benefit to society.**

The standard procedure for influenza and infectious disease of the past has been to test and count those who present themselves for treatment with doctors, clinics, and hospitals. The current practice of sending mobile clinics and mandatory testing is new with Covid-19 (SARS-CoV-2).

<https://www.foxnews.com/politics/flashback-obama-admin-halted-state-h1n1-testing-complicating-bidens-attacks-on-white-house>

## Public health officials disagreed with Obama CDC's decision

However, during the 2009 swine flu pandemic, the Obama administration suddenly told states to shut down their testing, without providing much in the way of explanation. And, Biden's top advisor at the time has acknowledged that the Obama administration didn't do "anything right" to combat that pandemic, before walking back those comments.

**Content on this page was developed during the 2009-2010 H1N1 pandemic and has not been updated.**

- **The H1N1 virus that caused that pandemic is now a regular human flu virus and continues to circulate seasonally worldwide.**
- **The English language content on this website is being archived for *historic and reference purposes only*.**
- **For current, updated information on seasonal flu, including information about H1N1, see the CDC Seasonal Flu website.**

## 2009 H1N1 Flu in Humans

### *Are there human infections with 2009 H1N1 virus in the U.S.?*

Yes. While 2009 H1N1 activity declined after later October, 2009 human illness with 2009 H1N1 is ongoing in the United States. In fact, the 2009 H1N1 virus is the predominant influenza virus in circulation so far during the 2009-2010 flu season. The United States experienced its first wave of 2009 H1N1 activity in the spring of 2009, followed by a second wave in the fall, with the number of people infected peaking at the end of October. There are still uncertainties surrounding the rest of this flu season, including the possibility that seasonal influenza viruses will spread during the winter as they usually do while 2009 H1N1 viruses continue to cause illness. In past pandemics, flu activity has occurred in waves and it's possible that the United States could experience another wave either later in the 2010 winter, or later. In the past, when new viruses have emerged to cause flu pandemics, the new virus has continued to spread among people. Experts believe it's likely that the new 2009 H1N1 virus will continue to circulate among people for some time, perhaps as a typical winter flu.

Covid concerns

**Comment:**

“I like to report a possible hot spot for the introduction of more covid to Sedgwick county

NorthStar RV park has out of state travelings into and out of the park. The operator is not following any of the required Covid directives concerning individuals or his business. This practice could result in extensive transmission of the virus within the state and past it's borders.

I would suggest someone pay them a visit

Thanks”

Mask mandates and co

**Comment:**

“Hello

I am a concerned citizen in Sedgwick Co. And I want to express that I strongly disagree with the mask mandates and any and all covid restrictions. You should only be able to recommend precautions but it's unconstitutional for you to mandate masks or control our businesses and lives. I believe that we are free Americans and should control what kind of risks we take on our own. We have been masked up for months now and obviously they don't work or else we wouldn't have so many "cases". Not to mention the 2% or less mortality rate. Please let us control our own lives and remove all restrictions and mandates.

New Health Order

**Comment:**

“Good morning, Commissioners!

I am writing to you today to make my voice heard regarding Dr. Minns' new health order that went into effect this morning.

First of all, regarding masks: THEY DO NOT WORK! If they worked, why are we still seeing cases rise!?

2nd: Why are you giving one unelected man the power/authority to lock down 500,000 citizens until a vaccine is ready for a virus with a 99% success rate? I've watched your meetings when I've been able to, and Dr. Minns NEVER presents ANY facts. He bases all of his decisions on feelings. You cannot base your decisions on feelings. You have to have facts and evidence to

make decisions. Commissioner Howell, you have done an excellent job. You always come prepared with facts and you ask great questions, but Dr. Minns CANNOT ANSWER THEM! Why are you other commissioners bowing to Dr. Minns?

3rd: My husband is a pastor. Our concern is for the spiritual health of our church family. Restricting large crowds to groups of 25 is detrimental to the church. We need the fellowship of our Christian brothers and sisters.

4. It's also ironic that you all would allow an order that restricts families from visiting one another during the holiday season, but we can all go to Walmart, Lowe's, or the Mall with hundreds of unrelated people.

5. School: our oldest son is in Kindergarten in the Derby school district. At Dr. Minns' recommendation, they have gone remote through the end of Christmas break. Again, a decision based off of feelings. I am a stay at home mom of 4. Our oldest is 6 and our youngest is 12 weeks. How in the world am I supposed to make my son sit and do his lessons while his 2 little brothers run around and play all day and I take care of our baby. This also disrupts my schedule, as I run all my errands during the day while he is in school. We chose to send him to school because it's not fair to him to try to learn in an environment full of distractions. The CDC even says that it is better for children to be in school.

6. Our mental health is as important as our mental health. Restricting where people can go and what they can do and how they do what they do has severe effects on mental health. I urge you to investigate suicides and suicide attempts as those numbers have sky rocketed across the country.

7. More small businesses, restaurants, and bars will fail because of the restrictions and hours Dr. Minns has imposed.

Please stop giving Dr. Minns so much control. A vaccine will not save us. Masks will not save us. Our extended family members have all worn masks for their jobs and they've all had Covid. This needs to run its course. Please reconsider this order.

Respectfully,

Emily Emery

Wichita resident and concerned citizen”

“<https://sentinelksmo.org/kdhe-shows-no-interest-in-obtaining-cycle-threshold-data/>”

CDC recommends threshold for Covid test should be at 32. Kansas tests are set at 38 or 40 contributing to many false positive Covid tests. The rate of Covid cases are much lower than they look. Stop the mandates and closings. 0.28 transmission rate in schools. Our children are safe at schools and should all be open

4. The Covid-19 Summary of 11-6-20 can provide a great hope and encouragement. The positive case represent the building of "herd Immunity" with the absence of a vaccine. The majority of those cases will not need treatment or need hospitalization. The majority of those hospitalized or suffering death will have compromising health conditions. The covid response is a choice that has not been made in past pandemics and flu seasons. We do have a choice in managing Covid-19.

5. Masks are being used as "talisman" devices. As an appropriate tool we could visit loved ones in a care facility or at the hospital and especially to see a dying loved one. A measure that was used prior to covid-19. However, now they are used as a general device in the public and not for visitation demonstrates the talisman effect to keep the people's fear of the virus as a political tool. " As described above, the wide use of masks by healthy people in the community setting is not supported by current evidence and carries uncertainties and critical risks."9

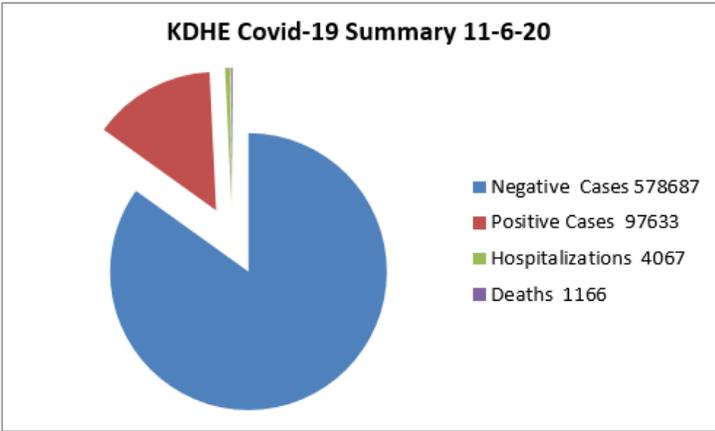

Rahm Emanuel, an American politician, created a phrase "never let a crisis go to waste". The election is over. It is time to return to the people, their fortunes, their lives, and their sacred honor. Please return to the past policies that work and protect the public.

The CDC explains in an archived webpage that individual cases of H1N1 pandemic influenza were monitored early on to track the spread of the disease, but as the virus became widespread, the case counts "became an increasingly inaccurate representation of the true burden of disease" as many people were mildly ill and did not seek treatment and the vast majority were not tested.

"CDC recognized early in the outbreak that once disease was widespread," the website continues, "it would be more valuable to transition to standard surveillance systems to monitor illness, hospitalizations and deaths."

On another webpage, the CDC says that individual case counts became "increasingly impractical and not representative of the true extent of the outbreak" because only a small proportion of patients were tested for influenza, "so the true benefit of keeping track of these numbers is questionable."7

October is historically a time of increase cases in past pandemics and flu seasons.

**Herd immunity is developed by exposure to the virus making positive cases a benefit to society.**

The standard procedure for influenza and infectious disease of the past has been to test and count those who present themselves for treatment with doctors, clinics, and hospitals. The current practice of sending mobile clinics and mandatory testing is new with Covid-19 (SARS-CoV-2).

## Public health officials disagreed with Obama CDC's decision

However, during the 2009 swine flu pandemic, the Obama administration suddenly told states to shut down their testing, without providing much in the way of explanation. And, Biden's top advisor at the time has acknowledged that the Obama administration didn't do "anything right" to combat that pandemic, before walking back those comments.

## 2009 H1N1 Flu in Humans

### *Are there human infections with 2009 H1N1 virus in the U.S.?*

Yes. While 2009 H1N1 activity declined after later October, 2009 human illness with 2009 H1N1 is ongoing in the United States. In fact, the 2009 H1N1 virus is the predominant influenza virus in circulation so far during the 2009-2010 flu season. The United States experienced its first wave of 2009 H1N1 activity in the spring of 2009, followed by a second wave in the fall, with the number of people infected peaking at the end of October. There are still uncertainties surrounding the rest of this flu season, including the possibility that seasonal influenza viruses will spread during the winter as they usually do while 2009 H1N1 viruses continue to cause illness. In past pandemics, flu activity has occurred in waves and it's possible that the United States could experience another wave either later in the 2010 winter, or later. In the past, when new viruses have emerged to cause flu pandemics, the new virus has continued to spread among people. Experts believe it's likely that the new 2009 H1N1 virus will continue to circulate among people for some time, perhaps as a typical winter flu."
