CROSSWALK MARKING PLAN FOR MULTI-LANE ROADWAY WITH CURB & GUTTER

FIVE-LANE ROADWAY

FOUR-LANE ROADWAY

The approach taper length from point A to point B is to be determined using CHART B. Values for L were calculated using the equations below and increased to the next higher 5 mph increment.

Speeds < 45 mph $L = \frac{W \cdot S^2}{60}$

Speeds ≥ 45 mph $L = W \cdot S$

If arrows are used and unless otherwise specified the space between lines should be at least four times the height of the characters for low speed roads but not more than ten times the height of the characters, under any conditions.

For speeds less than or equal to 40 mph, R=150'.
For speeds greater than or equal to 45 mph, R=300'.
