## List of Appendices

A	Participating Jurisdiction Adoption Documentation and FEMA Region VII Approval Documentation
B	Community Feedback
C	FEMA National Risk Index Census Tract Data
D	Jurisdiction Hazard Mitigation Actions

## List of Commonly Used Acronyms

Acronym	Meaning
ASCE	American Society of Civil Engineers
BRIC	Building Resilient Infrastructure and Communities
CDC	Centers for Disease Control and Prevention
CFR	Code of Federal Regulations
CRS	Community Rating System
DMA	Disaster Mitigation Act
EAL	Estimated Annual Loss
FEMA	Federal Emergency Management Agency
FIRMs	Flood Insurance Rate Maps
FMA	Flood Mitigation Assistance
GIS	Geographic Information System
HHPD	Rehabilitation Of High Hazard Potential Dam Grant Program
HMA	Hazard Mitigation Assistance
HMGP	Hazard Mitigation Grant Program
HMP	Hazard Mitigation Plan
IBC	International Building Code
LEPC	Local Emergency Planning Committee
NCEI	National Centers for Environmental Information
NFIP	National Flood Insurance Program
NOAA	National Oceanic and Atmospheric Administration
NRI	National Risk Index
NWS	National Weather Service
RL	Repetitive Loss
SFHA	Special Flood Hazard Area
SHMO	State Hazard Mitigation Officer
MPC	Mitigation Planning Committee
SRL	Severe Repetitive Loss
STAPLEE	Social, Technical, Administrative, Political, Legal, Economic, and Environmental
USACE	U.S. Army Corps of Engineers
USDA	U.S. Department of Agriculture
USGS	United States Geologic Survey
WUI	Wildland/Urban Interface

## Section 1 – Introduction, Assurances, and Adoption

### 1.1 Introduction

Mitigation is commonly defined as sustained action taken to reduce or eliminate long-term risk to people and their property from hazards and their effects. Hazard mitigation planning provides communities with a roadmap to aid in the creation and revision of policies and procedures, and the use of available resources, to provide long-term, tangible benefits to the community. A well-designed hazard mitigation plan provides communities with realistic actions that can be taken to reduce potential vulnerability and exposure to identified hazards.

This Multi-Jurisdictional Natural Hazard Mitigation Plan (HMP) was prepared to provide sustained actions to eliminate or reduce risk to people and property from the effects of natural and man-made hazards. This plan documents the Kansas Region G and its participating jurisdictions planning process and identifies applicable hazards, vulnerabilities, and hazard mitigation strategies. This plan will serve to direct available community and regional resources towards creating policies and actions that provide long-term benefits to the community. Local and regional officials can refer to the plan when making decisions regarding regulations and ordinances, granting permits, and in funding capital improvements and other community initiatives.

Specifically, this hazard mitigation plan was developed to:

- Update the 2019 HMP
- Build for a safer future for all citizens
- Foster cooperation for planning and resiliency
- Identify, prioritize, and mitigate against hazards
- Assist with sensible and effective planning and budgeting
- Educate citizens about hazards, mitigation, and preparedness
- Comply with relevant federal requirements

This plan has been designed to be a living document, a document that will evolve to reflect changes, correct any omissions, and constantly strive to ensure the safety of all citizens.

### 1.2 Assurances

In an effort to reduce natural disaster losses, the United States Congress passed the Disaster Mitigation Act of 2000 (DMA 2000) in order to amend the Robert T. Stafford Disaster Relief and Emergency Assistance Act (Stafford Act). DMA 2000 amended the Stafford Act by repealing the previous Mitigation Planning section (409) and replacing it with a new Mitigation Planning section (322). Section 322 of the DMA makes the development of a hazard mitigation plan a specific eligibility requirement for any local government applying for Federal mitigation grant funds. This HMP was prepared to meet the requirements of the DMA 2000, as defined in regulations set forth by the Interim Final Rule (44 Code of Federal Regulations (CFR) Part 201.4).

All adopting jurisdictions certify that they will comply with all applicable Federal statutes and regulations during the periods for which they receive grant funding, in compliance with 44 CFR 13.11(c), and will amend this plan whenever necessary to reflect changes in State or Federal laws and statutes as required in 44 CFR 13.11(d).

This hazard mitigation plan was prepared to comply with all relevant requirements of the Robert T. Stafford Disaster Relief and Emergency Assistance Act of 1988, as amended by the Disaster Mitigation Act of 2000. This plan complies with all the relevant requirements of:

- Code of Federal Regulations (44 CFR) pertaining to hazard mitigation planning
- Federal Emergency Management Agency (FEMA) planning directives and guidelines
- Interim final, and final rules pertaining to hazard mitigation planning and grant funding
- Relevant presidential directives

- Office of Management and Budget circulars
- Any additional and relevant federal government documents, guidelines, and rules.

### **1.3 Authorities**

The HMP relies on the authorities given to participating jurisdictions by its citizens and encoded in local and state law. This plan is intended to be consistent with all policies and procedures that govern activities related to the mitigation programing and planning. In all cases of primacy, State of Kansas and local laws, statutes, and policies will supersede the provisions of the plan.

### **1.4 Plan Adoption**

Upon review and approved pending adoption status by FEMA Region VII, adoption resolutions will be signed by the participating jurisdictions. FEMA approval documentation may be found in Appendix A. Jurisdictional adoption resolutions may be found in Appendix B.

Administration and oversight of the hazard mitigation program is the responsibility of the Kansas Division of Emergency Management (KDEM) Mitigation Branch and local county Emergency Management Departments. The plan will be reviewed annually and will be updated every five years, or as required by changing hazard mitigation regulations or guidelines.

## Section 2 – Documentation of the Planning Process

### 2.1 Planning Process

The process established for this planning effort is based on the Disaster Mitigation Act of 2000 planning and update requirements and the FEMA associated guidance for local hazard mitigation plans. To accomplish this, the following planning process methodology was followed:

- Inform, invite, and involve other mitigation plan stakeholders throughout the state, including federal agencies, state agencies, regional groups, businesses, non-profits, underserved communities, and local emergency management organizations.
- Conduct a thorough review of all relevant current and historic planning efforts.
- Collect data on all related state plans and initiatives, local plans' hazard risk, local plans' mitigation strategies and actions, state owned facilities, flood plains, Repetitive Loss/Severe Repetitive Loss properties, hazard events, on-going and completed mitigation actions, and mitigation program changes since the development of the previous plan.
- Conduct a review of all related and relevant state and local plans for integration and incorporation.
- Develop the planning and project management process, including methodology, review procedures, details about plan development changes, interagency coordination, planning integration, and the organization and contribution of stakeholders.
- Develop and update the profile of Kansas Region G.
- Complete a risk and vulnerability assessment using a Geographic Information System (GIS) driven approach using data from the FEMA and other federal and state agency resources. Analyses were conducted at the state level, county by county, of state-owned facilities, and county by county drawing on local assessments.
- Develop a comprehensive mitigation strategy effectively addressing Kansas Region G's hazards and mitigation program objectives. This included identifying state and local capabilities, reviewing pre and post disaster policies and programs, identifying objectives and goals, identifying mitigation actions and projects, and assessing mitigation actions and projects.
- Determination and implementation of a plan maintenance cycle, including a timeline for plan upgrades and improvements.
- Submission of the plan to FEMA for review and approval.

### 2.2 Hazard Mitigation Planning Equity

Planning equity refers to the principle of fairness and justice in planning and development processes. It emphasizes the equitable distribution of resources, opportunities, and benefits among all members of a community, particularly those who have historically been marginalized or disadvantaged. The concept of planning equity recognizes that planning decisions can have significant impacts on different groups of people and aims to ensure that these decisions promote social justice and inclusivity. It involves addressing spatial inequalities, such as disparities in access to housing, transportation, public services, green spaces, and employment opportunities.

Planning equity entails involving diverse stakeholders in decision-making processes, including community members, advocacy groups, and underrepresented populations. It seeks to empower marginalized communities by giving them a voice in shaping the development and planning policies that directly affect their lives.

Planning equity and hazard mitigation planning are closely related, as both aim to create more resilient and inclusive communities. As part of this planning effort, the following intersections were considered between planning equity and hazard mitigation planning:

- Vulnerability assessment: Planning equity recognizes that certain communities, particularly marginalized and disadvantaged populations, may be more vulnerable to hazards due to social, economic, and environmental factors. When conducting a vulnerability assessment as part of hazard mitigation planning, it is important to consider equity issues and identify areas or groups that may experience disproportionate impacts.

- Engaging marginalized communities: Planning equity emphasizes the inclusion and participation of diverse stakeholders, including marginalized communities, in decision-making processes. In hazard mitigation planning it is crucial to engage these communities to understand their unique needs, concerns, and perspectives regarding hazards.
- Addressing social disparities: Hazard mitigation planning can help address social disparities by considering the unequal distribution of resources and opportunities in the context of hazards. This can involve implementing mitigation measures that specifically target vulnerable populations, such as affordable housing in safer areas or improved access to emergency services and transportation for underserved communities.
- Equitable distribution of resources: Planning equity promotes the equitable distribution of resources, and this principle can be applied to hazard mitigation planning. It involves ensuring that mitigation measures and investments are allocated fairly, with consideration given to communities that have historically received less attention or investment. This can help reduce existing disparities and enhance the resilience of marginalized communities.

By integrating planning equity into hazard mitigation planning, it becomes possible to develop strategies and actions that not only reduce the risks associated with hazards but also promote social justice, inclusivity, and resilience for all members of the community.

As part of this planning process, the MPC considered potential inequities within the region and encouraged the participation of potentially vulnerable citizens and communities. This process began with recognizing that disparities exist within the region, including health outcomes and living conditions for people of color, people with disabilities, and historically disadvantaged communities. It was recognized that these populations may be at greater risk to the hazards identified in this plan and may be limited in their ability to adapt, respond, and recover if an event were to occur.

As recommended in FEMA’s “Guide to Expanding Mitigation,” Kansas Region G took a whole community approach to this planning effort, including:

- Inviting historically underserved populations to participate in the planning and decision-making processes,
- Inviting faith based and community organizations, nonprofit groups, schools, and academia to be plan stakeholders,

### **2.3 2024 Plan Update**

In undertaking this planning effort, the KDEM determined that wide variances in planning format and data do not allow for effective continuous planning. To provide planning continuity every effort was made during this plan update to adhere as closely as possible to elements of the 2019 HMP. As such, the level of analysis and detail included in this risk assessment is cumulative, allowing participating jurisdictions to have a robust base to further mold and improve their mitigation strategies over the next five years.

As part of this planning effort, each section of the previous mitigation plan was reviewed and revised based on current and available data. The plan was reviewed and revised against the following elements:

- Compliance with the current regulatory environment
- Completeness of data
- Correctness of data
- Capability differentials
- Current regional environment

Based on the above criteria, each section of the 2019 HMP was reviewed and revised as required. In addition to data revisions, the format and sequencing of the previous plan was updated for ease of use and plan clarity. Additionally, during this process, and after a thorough review and discussion with all stakeholders, it was determined that the priorities

of the Kansas Region G in relation to hazard mitigation planning have not changed during the five years of the previous planning cycle.

## **2.4 Planning Document Resources**

The hazard mitigation plan is an overarching document that is both comprised of, and contributes to, various other jurisdictional plans. In creating this plan, all the planning documents identified below were consulted and reviewed, often extensively. In turn, when each of these other plans is updated, they will be measured against the contents of the hazard mitigation plan.

Below is a list of the various planning efforts, sole or jointly administered programs, and documents reviewed and included in this hazard mitigation plan. While each plan can stand alone, their review and functional understanding was pivotal in the development of this plan and further strengthens and improves a jurisdiction's resilience to disasters.

- **Kansas Region G 2019 Multi-Jurisdictional Natural Hazard Mitigation Plan**  
The previous HMP has been reviewed and is incorporated throughout this plan per FEMA requirements.
- **Jurisdictional Comprehensive Plans**  
These plans as available, set policies that help the jurisdiction address critical issues facing the community, achieve goals based on priority, and coordinate public and private efforts for mutual success. They also provide the historical context, background, and current data necessary to understand issues and choose solutions as well as seek various forms of funding.
- **Participating Jurisdictions Master and/or Comprehensive Plans:**  
These plans, as available, help jurisdictions set policies that help address critical issues facing the community, achieve goals based on priority, and coordinate public and private efforts for mutual success. They also provides the historical context, background, and current data necessary to understand issues and choose solutions as well as seek various forms of funding.
- **Jurisdictional Emergency Operations Plans**  
These plans are used by jurisdictions to develop procedures for the protection of personnel, equipment, and critical records to help determine existing established policies that ensure the continuity of government and essential services during and after disasters.
- **State of Kansas 2023 Hazard Mitigation Plan**  
The State of Kansas Hazard Mitigation Plan is intended to provide the framework for hazard mitigation. This plan set a baseline for standards and practices for hazard mitigation planning and was used as a resource for information and data.
- **Participating Jurisdiction Planning and Zoning Documents and Ordinances**  
These documents were reviewed, assessed, and cataloged to compile each participating jurisdiction's capabilities.
- **Flood Mitigation Plans:**  
These plans are developed by communities, local governments, or relevant authorities to outline measures and strategies aimed at reducing the impact of flooding on people, property, and the environment. The primary goal of a flood mitigation plan is to minimize the risks associated with flooding through proactive planning, infrastructure improvements, and community engagement.
- **Fire Mitigation Plans:**  
These plans document developed to reduce the risk of wildfires and minimize their potential impact on people, property, and ecosystems. The primary objectives of a fire mitigation plan are to enhance community resilience, protect critical infrastructure, and promote ecosystem health.
- **Land Use Plans:**  
These plans outline the intended development, management, and use of land within a specific area or jurisdiction. The goal of a land use plan is to promote orderly and sustainable development, taking into account factors such as economic, social, and environmental considerations.

## 2.5 Technical Resources

The MPC employed a variety of technical resources during plan development. These technical resources were instrumental in completing an accurate vulnerability and risk assessment, and include:

- **Kansas Emergency Operations Plan Mapping Program:** Assisted with the development of maps for this plan.
- **FEMA Digital Flood Insurance Rate Maps:** FEMA's National Flood Hazard Layer data was instrumental in mapping floodplain locations and estimating potential flood impacts and loss estimates.
- **FEMA National Risk Index (NRI):** An online mapping application that identifies communities most at risk to natural hazards. The mapping service visualizes natural hazard risk metrics and includes data about expected annual losses from natural hazards, social vulnerability, and community resilience. The NRI's interactive web maps are at the county and Census tract level and made available via GIS services for custom analyses.
- **National Oceanic and Atmospheric Administration (NOAA)/National Centers for Environmental Information (NCEI):** Weather data and historical events were primarily provided by NCEI.
- **U.S. Army Corps of Engineers (USACE):** Levee and flood control data.
- **U.S. Department of Agriculture (USDA):** Drought and agricultural data.
- **U.S. Geological Survey:** Geologic hazard occurrence and probability data.
- **National Weather Service (NWS):** Storm event occurrence and probability data.
- **KDEM:** Dam safety program and hazardous material data.

## 2.6 Mitigation Planning Committee

Project initiation began with the selection of a Mitigation Planning Committee (MPC), consisting of each participating county emergency manager from Kansas Region G and KDEM Mitigation Branch staff. From project inception to completion, the MPC was notified at each major plan development milestone through a combination of meetings and electronic communication.

In general, all MPC members were asked to participate in the following ways:

- Attend and participate in meetings
- Assist with the collection of data
- Assure the accuracy and completeness of data
- Assist with the revision and development of mitigation actions
- Review planning elements and drafts
- Integrate hazard mitigation planning elements with other planning mechanisms

As an additional responsibility as part of the MPC, KDEM members helped establish project operating procedures and timelines, and assisted with the establishment of project milestones.

The following table represents members of the MPC:

**Table X: MPC Members**

<b>Agency</b>	<b>Representative</b>	<b>Title</b>
Butler County	Keri Korthals	Emergency Manager
Cowley County	Candace Baross	Emergency Manager
Harper County	Christina Cintron	Emergency Manager
Harvey County	Mike Anderson	Emergency Manager
Kingman County	Macay Ewy	Emergency Manager
Marion County	Marcy Hostetler	Emergency Manager
McPherson County	Julie McClure	Emergency Manager
Reno County	Todd Strain	Emergency Manager

**Table X: MPC Members**

<b>Agency</b>	<b>Representative</b>	<b>Title</b>
Rice County	Greg Klein	Emergency Manager
Sedgwick County	Julie Stinson	Emergency Manager
Sumner County	James Fair	Emergency Manager
KDEM	Stephanie Goodman	State Hazard Mitigation Officer
KDEM	Dirk Christian	Planning & Mitigation Bureau Director
KDEM	Jim Leftwich	Southcentral Regional Coordinator

Repeated outreach efforts were made to equity partners extending opportunities to have a representative on the MPC.

## 2.7 Stakeholders

All eligible jurisdictions were invited to participate in the organization, drafting, completion and adoption of this plan. Invited jurisdictions included, but were not limited to, building officials, floodplain managers, elected officials, relevant State of Kansas agencies, counties, cities, school districts, non-profit agencies, and businesses.

In order to have an approved hazard mitigation plan, DMA 2000 requires that each jurisdiction participate in the planning process. Each jurisdiction choosing to participate in the development of the plan were required to meet detailed participation requirements, which included the following:

- When practical and affordable, participation in planning meetings
- Provision of information to support the plan development
- Identification of relevant mitigation actions
- Review and comment on plan drafts
- Formal adoption of the plan

Based on the above criteria, the following jurisdictions participated in the planning process, and will individually as a jurisdiction adopt the approved hazard mitigation plan:

Kansas Region G acknowledges that effective hazard mitigation planning should involve a diverse group of stakeholders, including government agencies, private sector entities, private non-profit organizations, quasi-governmental authorities, and special districts. The coordination and cooperation of these stakeholders assists with all aspects of plan development, including:

- Data collection
- Risk analysis
- High and Significant Hazard dam information
- Statewide capability assessment
- Mitigation action review, revision, and development
- Plan implementation

The Kansas Region G MPC provided the opportunity for additional HMP stakeholders, including jurisdictional National Flood Insurance Program (NFIP) coordinators, agencies involved in regulating and overseeing development,

neighboring communities, agencies, businesses, academia, non-profits, underserved or marginalized communities, and other interested parties to be involved in the mitigation planning process.

Jurisdictional NFIP coordinators played a key role in mitigation planning at the community level. These coordinators were actively engaged and for their expertise on flood risk, mitigation strategies, and NFIP compliance in the writing of this plan.

Local building departments played a critical role in creating and reviewing this HMP. Their expertise was used to help identify local vulnerabilities and develop building-related mitigation measures in this plan.

## **2.8 Community Outreach**

As part of the overall planning process, the community was provided with numerous opportunities to contribute and comment on the creation and adoption of the plan. These opportunities included:

- Advertised meeting invitations
- Comment period upon completion of draft plan
- Online survey

Experience has indicated that public meetings, no matter how well advertised, generally do not generate either participation or interest in the planning process. Even so, three open meetings were held at an easily accessible community locations. To help generate community interest and participation, a parallel online outreach strategy was undertaken. An online HMP survey was created, the Kansas Region G Hazard Mitigation Plan Update Survey. This online survey portal allowed community members to provide feedback and input on the HMP update using a series of guided questions and open comment fields. Community members commented through this survey, and these comments are both incorporated in this HMP and are included in Appendix B.

Input from the general public provided the MPC with a clearer understanding of local concerns, increased the likelihood of citizen buy-in concerning proposed mitigation actions, and provided elected officials with a guide and tool to set regional ordinances and regulations. Additionally, as citizens were made more aware of potential hazards and the local process to mitigation against their impacts, it was believed that they would take a stronger role in making their homes, neighborhoods, schools, and businesses safer from the potential effects of natural hazards.

## **2.9 Planning Meetings**

Three in-person meetings were conducted for the 2024 HMP update. All of the meetings were held in a publicly accessible location and advertised as open to the public. These meeting were conducted to discuss the mitigation planning process as well as gain public support and input for the plan update. The following is a brief synopsis of those meetings.

- **HMP Update Kick-Off and Public Information Meeting – August 17, 2023:** Kansas Region G hosted a kick-off meeting for the MPC, stakeholders, and the public. At the meeting, MPC members, plan stakeholders, and the public were invited to voice any concerns, ask questions, and provide input on the mitigation plan update. Additionally, MPC members were tasked with collecting contact information, hazard history, facility information, and other pertinent information from participating jurisdictions.
- **HMP Plan Review, Capability Review, and Mitigation Strategy Review Meeting – December 12, 2023:** Kansas Region G hosted a mid-term planning meeting for the MPC. Attendees met to review and revise, as necessary, the region’s hazards list and vulnerability assessment. MPC members and jurisdictional representatives also reviewed the proposed and revised mitigation strategy to ensure it was in-line with the current planning environment.
- **HMP Update Final Review Meeting – January 31, 2024:** Kansas Region G hosted a public final plan review meeting for the MPC, stakeholders, and the public. At the meeting, MPC members, jurisdictional representatives, plan stakeholders, and the public were invited to voice any concerns, ask questions, and provide

input on the mitigation plan update. Additionally, members of the public were invited to review a draft copy of the HMP update posted to jurisdictional and county websites for two weeks prior to the final meeting, and prior to its submission to FEMA Region VII.

Additionally, there were monthly situation reports provided to the State Hazard Mitigation Officer (SHMO) to provide updates concerning the phases of plan development.

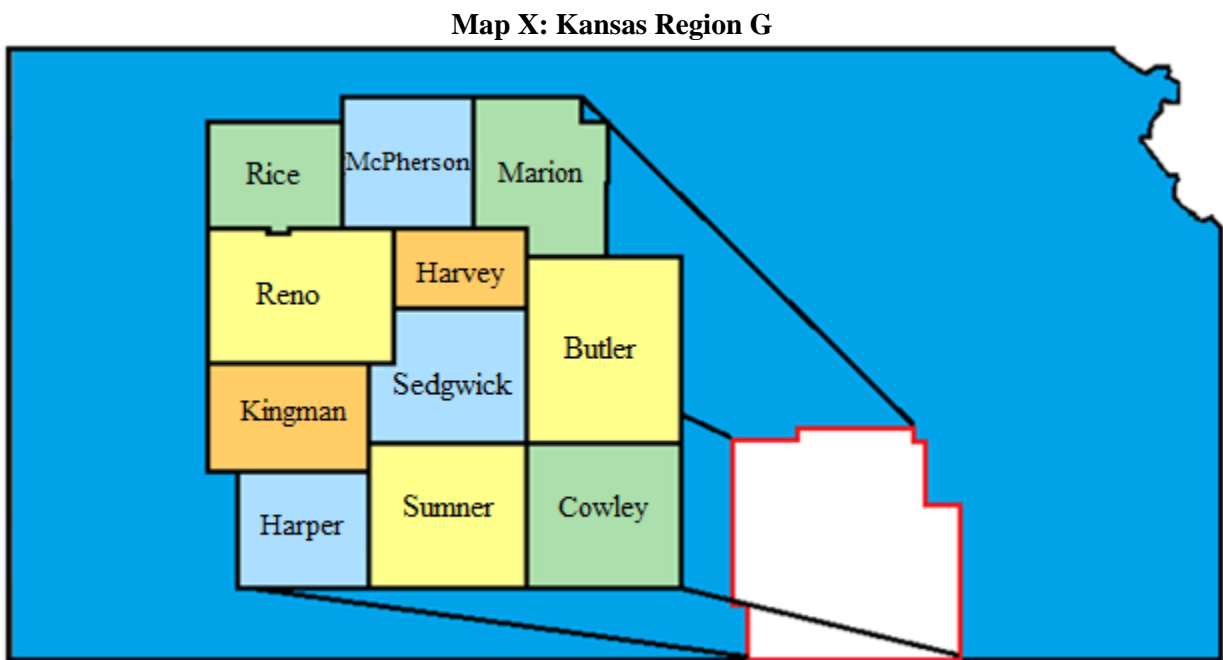

## Section 3 – Regional Profile and Development Trends

### 3.1 Introduction

Data concerning development trends and conditions is of great importance in determining regional and local risk and vulnerability to identified hazards, especially in locations which are susceptible to identified hazards. In general, any increase in population or development in hazard susceptible areas tends to increase both the risk and the vulnerability to that hazard. As such, the information presented in this chapter details relevant population and building statistics for the region on a local level basis. This data will then be used to determine and refine potential hazard vulnerability in succeeding sections.

### 3.2 Regional Maps

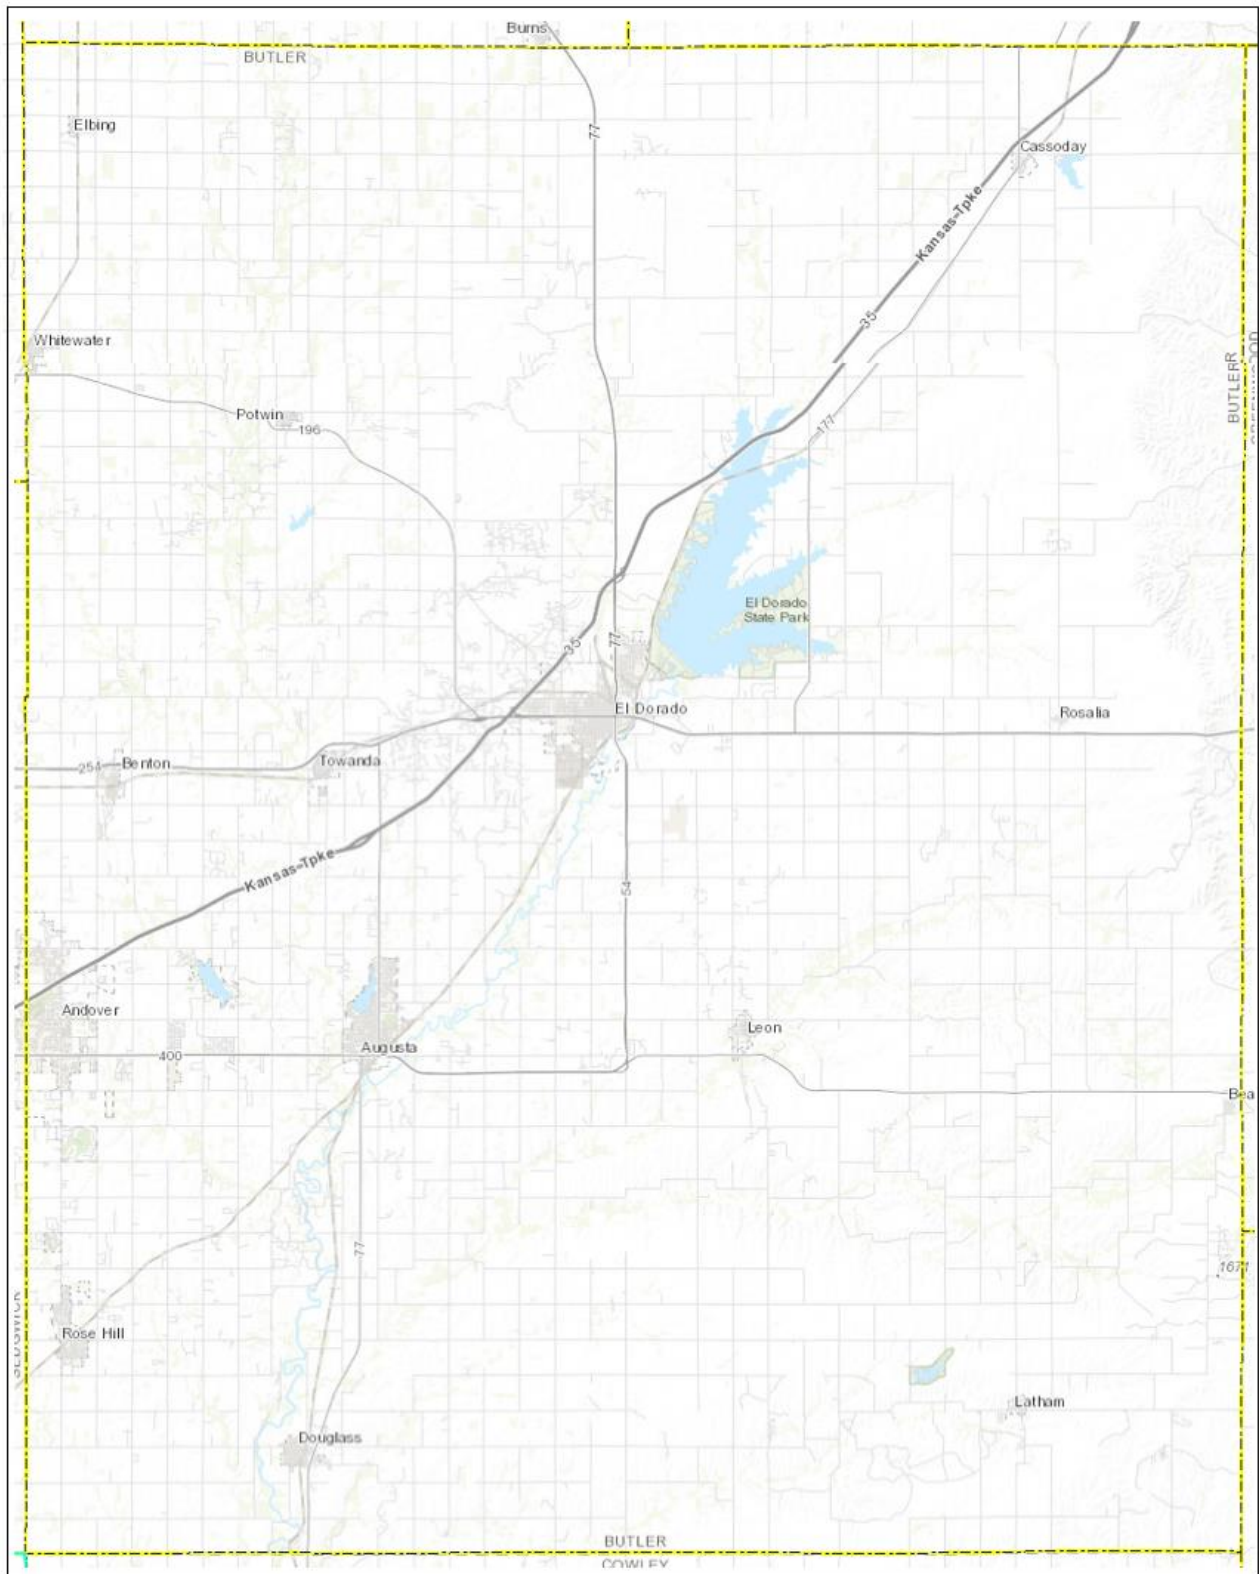

The following map details the locations of Kansas Region G relative to the State of Kansas:

### 3.3 Regional Population Data

Kansas Region G has seen population growth in two counties, Butler and Sedgwick, and declining populations in the remaining counties over the 20-year period from 2000 to 2020, as indicated by data collected from the United State Census Bureau. The following table, and associated chart, presents population data for the 11 Kansas Region G counties.

**Table X: Kansas Region G Population Data**

County	Population			Percentage Population Change 2000-2020	Total Land Area (Sq. Mi.)	Population Density
	2000	2010	2020			
Butler County	59,482	65,880	67,380	13.3%	1,447	47
Cowley County	36,291	36,311	34,539	-4.8%	1,132	31
Harper County	6,536	6,034	5,485	-16.1%	803	7
Harvey County	32,869	34,684	34,024	3.5%	541	63

**Table X: Kansas Region G Population Data**

County	Population			Percentage Population Change 2000-2020	Total Land Area (Sq. Mi.)	Population Density
	2000	2010	2020			
Kingman County	8,673	7,858	7,470	-13.9%	867	9
Marion County	13,361	12,660	11,823	-11.5%	954	12
McPherson County	29,554	29,180	30,233	2.3%	901	34

### 3.4 Social Vulnerability

As a subset of the population data, Kansas Region G has socially vulnerable and at-risk populations, populations that may have difficulty with medical issues, poverty, extremes in age, and communications due to language barriers. Several principles may be considered when discussing potentially at-risk populations, including:

- Not all people who are considered at risk are at risk
- Outward appearance does not necessarily mark a person as at risk
- The hazard event will, in many cases, affect at risk population in differing ways

The National Response Framework defines at risk populations as "populations whose members may have additional needs before, during, and after an incident in functional areas, including but not limited to: maintaining independence, communication, transportation, supervision, and medical care." The following tables, and associated charts, present information on potential at risk populations within Kansas Region G on a county level for the five-year period 2017 to 2022 (latest available data).

**Table X: Kansas Region G Population Under the Age of Five**

Using data from the Centers for Disease Control and Prevention (CDC)/Agency for Toxic Substances and Disease Registry Social Vulnerability Index FEMA’s NRI creates and maps a Social Vulnerability score. In this context, social vulnerability is the susceptibility of social groups to the adverse impacts of natural hazards, including disproportionate death, injury, loss, or disruption of livelihood. This score represents the relative level of a community’s social vulnerability compared to all other communities at the same level. A qualitative rating that describes the community in comparison to all other communities at the same level, ranging from “Very Low” to “Very High” is used quantify Social Vulnerability. Census tracts with the social vulnerability score highest qualify for designation as a community disaster resilience zone. Census tracts designated as a community disaster resilience zone may receive special technical assistance, planning assistance, and a 90% federal funding match (as opposed to the standard 75% federal match) for mitigation projects.

Data concerning social vulnerability is reported by county and by census tract, which can be analogous with jurisdictions. The following maps details the social vulnerability both county and census tract for Kansas Region G:

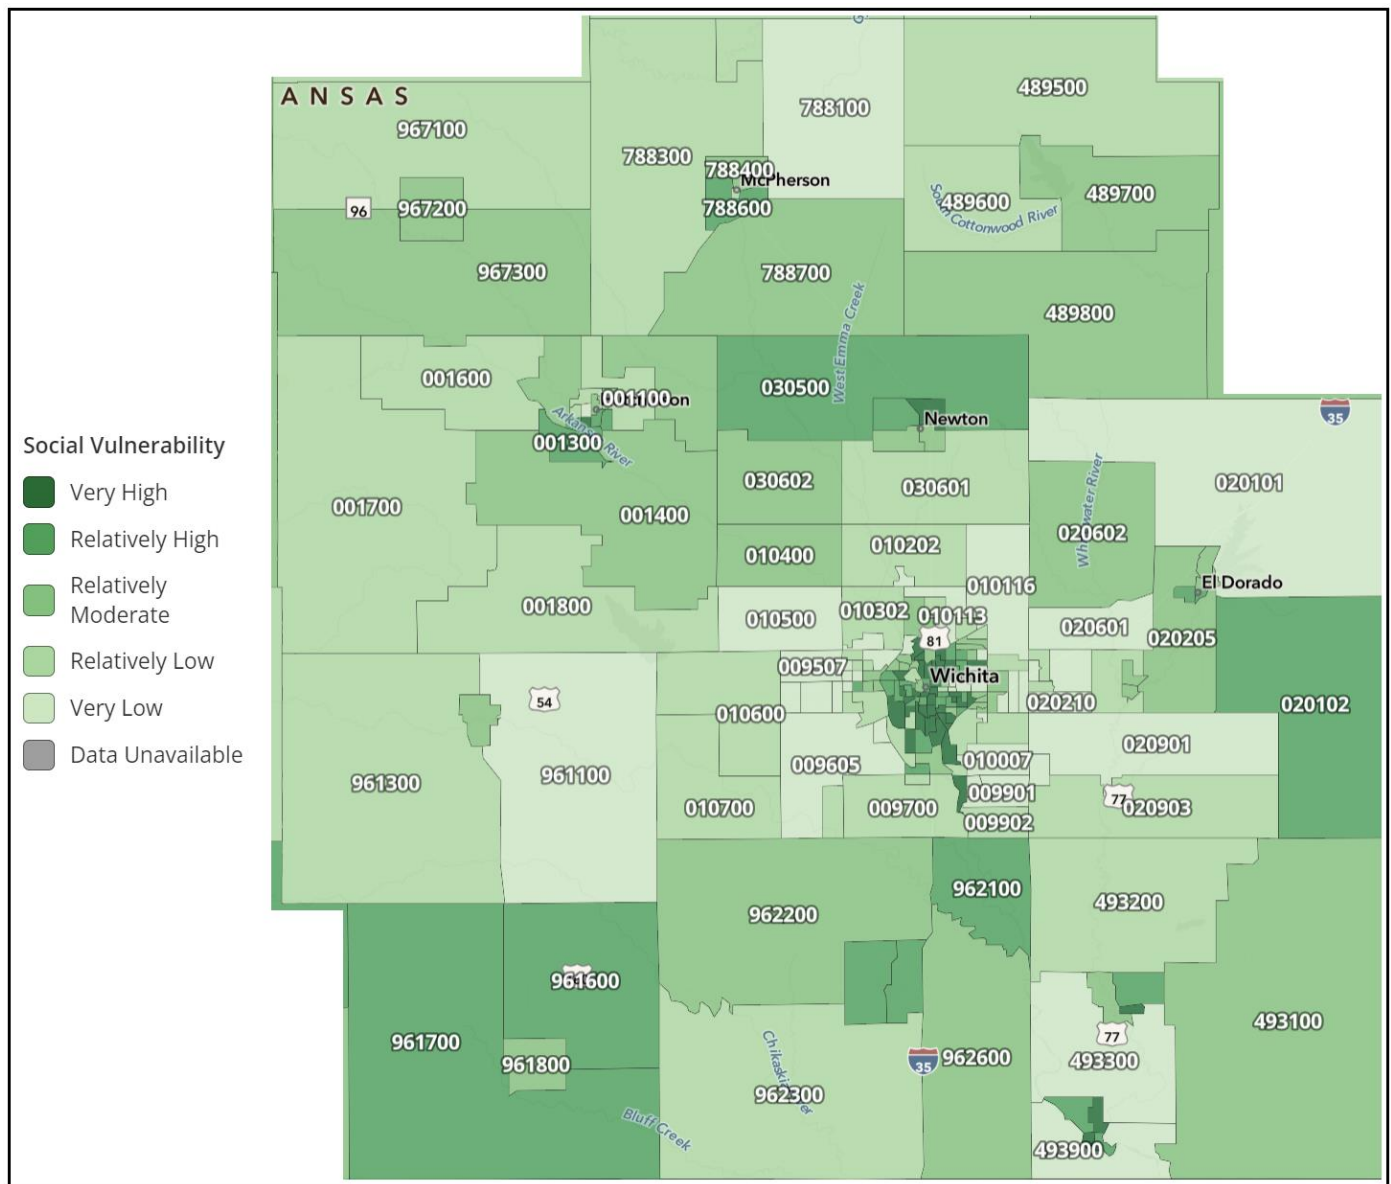

**Map X: FEMA NRI Kansas Region G Social Vulnerability Map**

Source: FEMA

**Map X: FEMA NRI Kansas Region G Social Vulnerability Map**

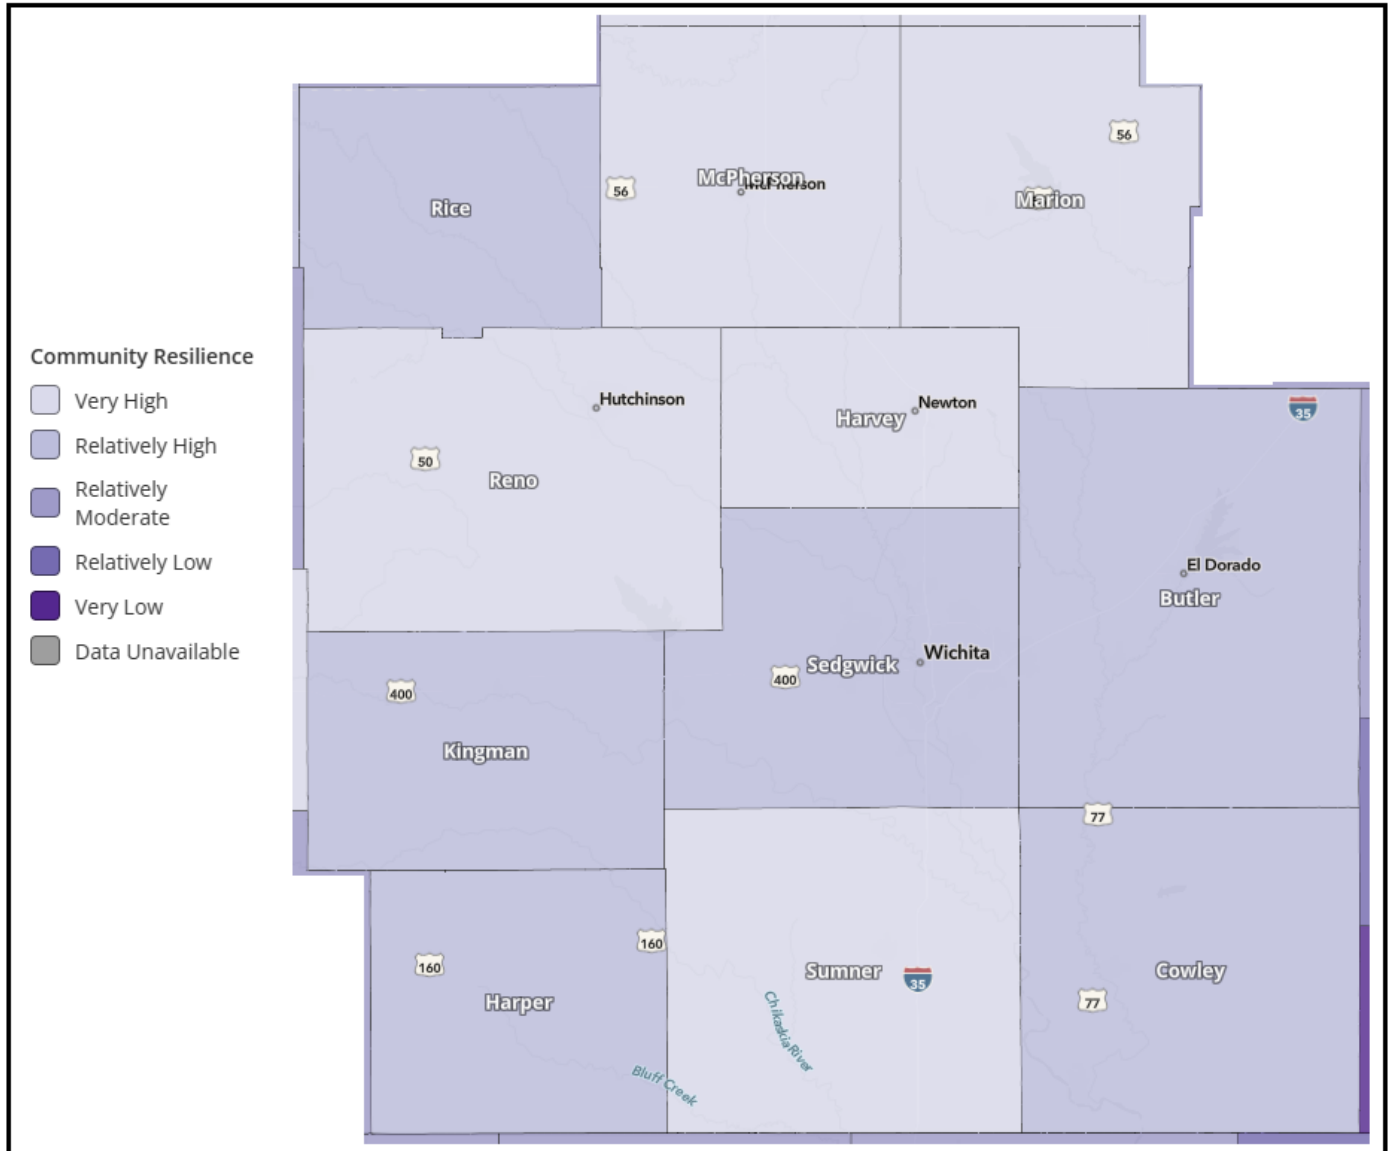

Source: FEMA

Augmenting these maps, full NRI census tract data is available in Appendix D detailing specific information for each census tract in each Kansas Region G county.

Community resilience is the ability of a community to prepare for anticipated natural hazards, adapt to changing conditions, and withstand and recover rapidly from disruptions. Factors that are considered when calculating community resilience include governance, infrastructure, education, and other capabilities that help communities deal with hazards on their own. As a consequence reduction risk component of the NRI, a community resilience score and rating represent the relative level of a community's resilience compared to all other communities at the same level. A community resilience score is inversely proportional to a community's risk.

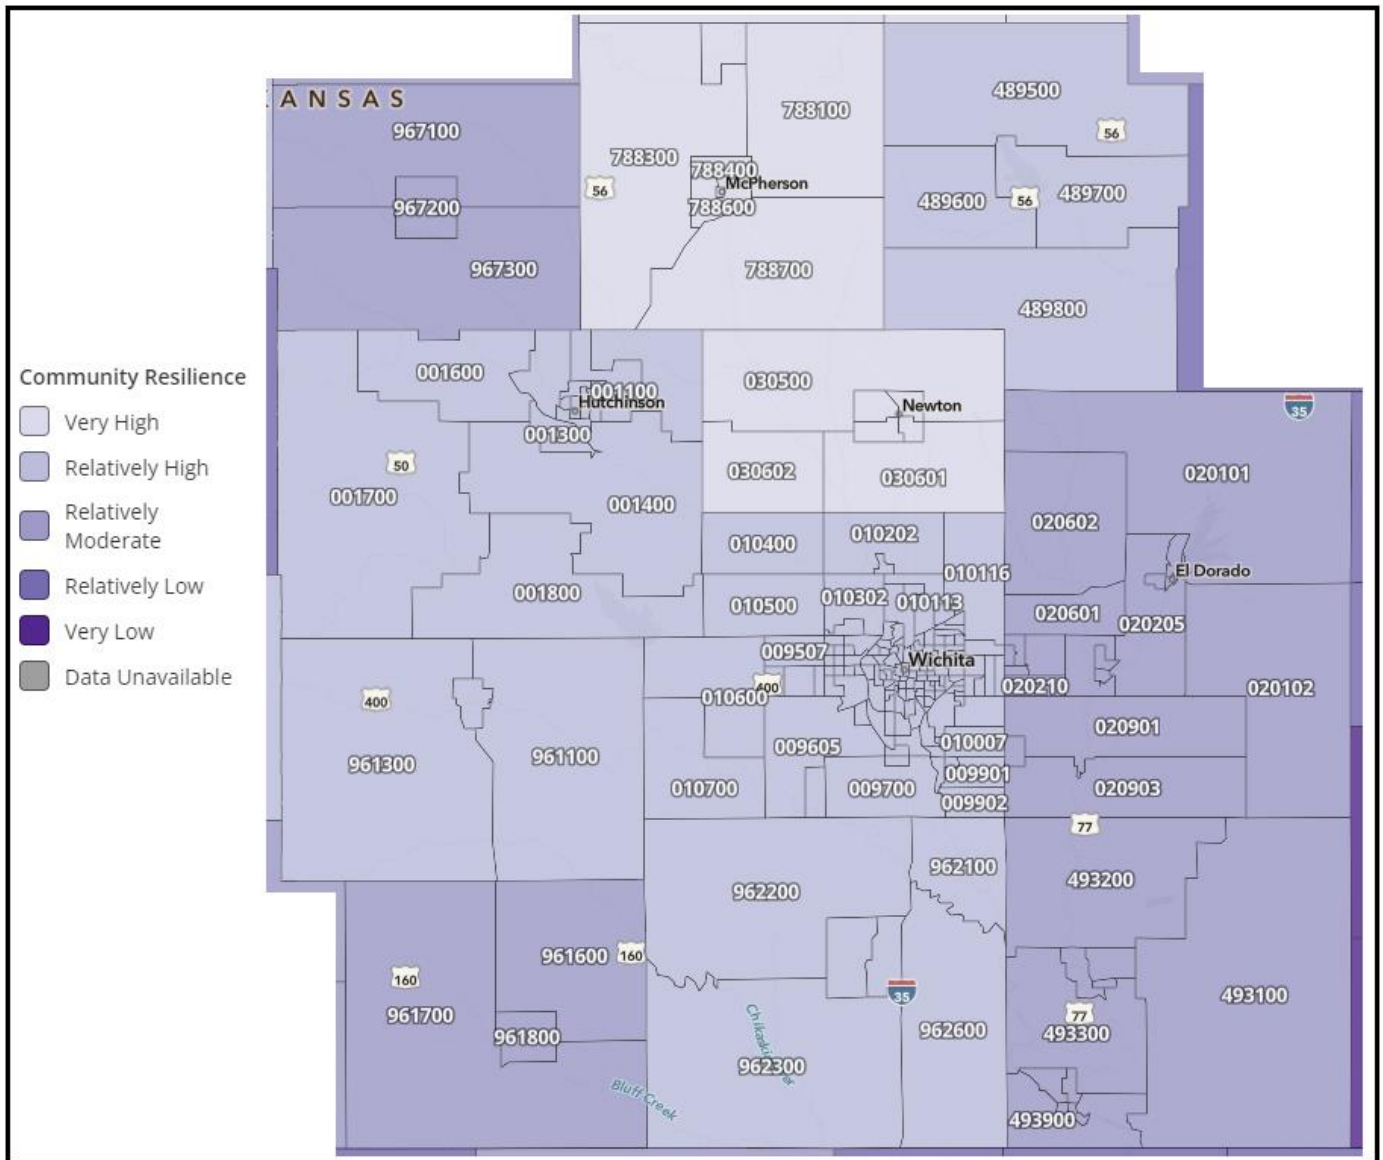

Data concerning community resilience is reported on the county level and by census tract, which can be analogous with jurisdictions. The following maps detail community resilience by both county and census tract for Kansas Region G:

**Map X: FEMA NRI Kansas Region G Community Resilience Map**

Source: FEMA

**Map X: FEMA NRI Kansas Region G Community Resilience Map by Census Tract**

Augmenting these maps, full NRI census tract data is available in Appendix D detailing specific information for each census tract in each Kansas Region G county.

### 3.5 Regional Population Migration

Kansas Region G, an area of the state known for its agricultural heritage and close-knit rural communities, is experiencing a significant population movement as people increasingly migrate from rural areas to urban centers. This transformation reflects broader demographic trends witnessed across the United States. Demographic research indicates that this migration is occurring due to the following factors:

- **Economic Opportunity:** A primary driver of the population movement from rural to urban areas is the quest for better economic prospects. Urban centers such as Wichita, the largest city in the region, offer a diverse range of employment opportunities in sectors like manufacturing, healthcare, finance, and technology. These opportunities often come with higher wages and better access to educational and healthcare facilities compared to rural locales.

- **Technological Advancements in Agriculture:** The modernization of agriculture has led to increased mechanization and efficiency, reducing the demand for manual labor on farms. As a result, rural residents whose livelihoods were traditionally tied to farming are increasingly seeking employment in urban areas.
- **Access to Education and Training:** Urban centers are often home to educational institutions, including colleges, universities, and vocational schools. Young people from rural areas often migrate to these urban settings to pursue higher education and vocational training. This educational mobility is a key factor in the rural-to-urban population shift.

The rural-to-urban population movement has significant implications for both rural and urban areas in Kansas Region G. Rural communities may experience declining populations, school closures, and reduced economic activity. Meanwhile, urban centers may undergo growth, requiring increased investment in housing, infrastructure, and public services to accommodate the influx of new residents.

The following chart, using data from the Wichita State University Center for Economic Development and Business Research Kansas Population Forecast, indicates population projections (potentially due to rural-to-urban migration) for Kansas Region G. As indicated in the report, all counties, with the exception of Sedgwick County, are indicated to have either a generally static or decreasing populations over the next 40 years.

**Chart X: Kansas Region G Population Projection, 2014-2064**

### 3.6 Regional Housing Data

Closely tracking population data, but tending to lag population changes, housing data is a good indicator of changing demographics and growth. The following table and associated chart, using data from the U.S. Census, present occupied housing unit information for the 11 Region G counties.

**Table X: Kansas Region G Housing Data**

County	Occupied Housing Units			Numeric Change 2000-2020	Percentage Change 2000-2020
	2000	2010	2020		
Butler County	23,176	23,992	25,201	2,025	8.7%
Cowley County	15,673	13,940	13,800	-1,873	-12.0%
Harper County	3,270	2,647	2,367	-903	-27.6%
Harvey County	12,581	13,411	13,263	682	5.4%
Kingman County	3,852	3,464	3,253	-599	-15.6%
Marion County	5,882	5,063	4,838	-1,044	-17.7%

FEMA's Hazus is a nationally standardized risk modeling methodology that uses GIS-based data to identify areas with high risk for natural hazards. Hazus also details the number of buildings and the replacement value of those buildings within the defined area. The following data, from Hazus, indicates the total number of buildings, the replacement

valuation (excluding contents), and the percentage of buildings identified as residential properties for Kansas Region G:

**Table X: Kansas Region G Hazus Structure Information**

<b>Jurisdiction</b>	<b>Number of Buildings</b>	<b>Replacement Value</b>	<b>Percentage Residential</b>
Butler County	26,413	\$6,324,000,000	82.7 %
Cowley County	15,909	\$3,486,000,000	77.0%
Harper County	3,508	\$753,000,000	68.6%
Harvey County	14,537	\$3,706,000,000	73.8%
Kingman County	4,269	\$980,000,000	74.9%
Marion County	6,426	\$1,479,000,000	75.4%
McPherson County	13,450	\$3,576,000,000	72.5%
Reno County	28,105	\$6,727,000,000	71.4%
Rice County	5,072	\$1,126,000,000	73.5%
Sedgwick County	188,642	\$54,479,000,000	74.1%
Sumner County	11,656	\$2,654,000,000	76.5%

Of particular concern when considering housing data is mobile home residences. Data from the NOAA National Severe Storms Laboratory reports that people living in mobile homes are especially at risk for injury and death as even anchored mobile homes can be seriously damaged when winds gust over 80 miles per hour. Additionally, study data from Michigan State University reported that the two biggest factors related to wind event fatalities were housing quality (measured by mobile homes as a proportion of housing units) and income level. When a tornadic wind strikes, a county with double the number of mobile homes as a proportion of all homes will experience 62% more fatalities than a county with fewer mobile homes, according to the study data. The following indicates the percentage of mobile homes for each Region G county:

**Table X: Kansas Region G Mobile Home Data**

Jurisdiction	Number of Mobile Homes	Percentage Of Housing Stock as Mobile Homes
Butler County	1,926	7.6%
Cowley County	1,099	8.4%
Harper County	101	4.6%

### 3.8 Regional Land Use

Land use in a region has a profound and lasting impact on future development. The way land is allocated and utilized can shape the economic, social, and environmental aspects of a region for decades. Land use affects that can impact future development include:

- **Economic Development:** Land use decisions influence the location and type of economic activities in a region. Zoning regulations that encourage the development of industrial zones can attract manufacturing businesses, while zoning for commercial and residential areas can promote retail and housing development. These decisions can have long-term implications for job creation, revenue generation, and the overall economic health.
- **Transportation and Infrastructure:** Land use planning is closely tied to transportation infrastructure. The location of road and other transportation facilities is determined in part by land use decisions. Well-planned land use can lead to efficient transportation networks, reducing congestion, and improving mobility. Poorly planned land use, on the other hand, can result in traffic congestion and increased infrastructure costs.
- **Housing and Urbanization:** Land use policies influence the availability and affordability of housing in a region. Zoning regulations, for example, can determine the density of residential areas and the types of housing permitted. Inadequate or restrictive land use policies can lead to housing shortages and higher costs, while well-planned policies can support diverse housing options and affordability.
- **Resilience to Climate Change:** Land use planning plays a critical role in a region's ability to adapt to climate change. Smart land use decisions can reduce vulnerability to natural disasters, such as flooding and wildfires, by avoiding high-risk areas and implementing resilient building codes and infrastructure.
- **Long-Term Costs:** Land use decisions can affect the long-term costs of development. Efficient land use planning can reduce the need for costly infrastructure extensions and maintenance, while inefficient or sprawling development can strain municipal budgets.

As indicated by the following map from the University of Kansas, land use in Kansas Region G is largely rural and agricultural (with the exception of a few larger cities such as Hutchinson and Wichita).

**Map X: Kansas Land Cover**

Source: University of Kansas

Rural and agricultural areas in Kansas tend to retain their rural and agricultural nature over time, but there are several factors that can influence the evolution of these areas, including:

- **Economic Conditions:** The economic viability of agriculture can vary significantly over time due to factors like crop prices, weather patterns, and changes in agricultural technology. Economic challenges may lead some farmers to sell their land for non-agricultural uses or to consolidate their operations, potentially affecting the rural landscape.
- **Urbanization and Development:** In some cases, rural areas in Kansas may experience suburbanization or the expansion of nearby urban centers. This can result in residential and commercial development encroaching on agricultural land. However, the extent of this development depends on local zoning and land use regulations.
- **Infrastructure Development:** The construction of new transportation infrastructure, such as highways or railroads, can influence land use patterns. Improved infrastructure may make it easier to transport agricultural products to markets or to access rural areas for development.
- **Government Policies:** Government policies, including agricultural subsidies, land use regulations, and conservation programs, can impact the way rural and agricultural land is used. For example, conservation programs may encourage farmers to preserve land for wildlife habitat rather than development.

- **Local Planning and Zoning:** Local governments play a key role in land use planning and zoning regulations. These policies can determine whether agricultural land can be converted to non-agricultural uses, such as residential or commercial development. Some areas may have strict zoning that preserves agricultural character, while others may allow more flexibility.
- **Population Trends:** Demographic trends, including population growth or decline, can influence the demand for land in rural areas. If there is an influx of new residents seeking a rural lifestyle, it can drive demand for residential development in formerly agricultural areas.

### **3.9 Regional Development**

All building and infrastructure improvements play a crucial role in hazard mitigation by enhancing a community's resilience and ability to withstand, respond to, and recover from various hazards. The relationship between building and infrastructure improvement and hazard mitigation can be understood through several key aspects:

- **Enhanced Structural Resilience:** Upgrading and fortifying critical infrastructure, such as buildings, bridges, and utilities, can improve their structural resilience to withstand the forces of natural disasters. Reinforced structures are less likely to suffer damage or fail during hazardous events.
- **Upgraded Utility Systems:** Modernizing and reinforcing utility systems, such as water, sewer, and electrical networks, can minimize disruptions during hazardous events. Upgraded utility systems are less prone to damage, reducing the risk of service outages and improving the community's ability to recover quickly.
- **Flood Control and Stormwater Management Infrastructure:** Improvements related to flood control and stormwater management can mitigate the impact of flooding. These measures help channel water away from vulnerable areas, protecting lives, property, and critical infrastructure.
- **Climate-Resilient Building and Infrastructure:** With the increasing frequency and intensity of climate-related hazards, building and infrastructure improvement can involve incorporating climate-resilient design principles. This includes constructing buildings and infrastructure that can withstand extreme weather events, rising sea levels, and other climate-related challenges.

In particular, infrastructure repair can have a significant impact on regional development, both positive and negative. The specific effects depend on the scale of the repair projects, the quality of the infrastructure, and the overall economic and social context of the region, and may include:

- **Improved Connectivity:** Repairing and upgrading infrastructure, such as roads, bridges, and ports, can enhance connectivity within and between regions. This improved connectivity can reduce transportation costs, facilitate the movement of goods and people, and attract businesses and investments to the region.
- **Economic Growth:** Functional infrastructure supports economic activities. When infrastructure is repaired, it can create jobs directly in the construction and maintenance sectors. Additionally, it can indirectly stimulate economic growth by providing a reliable foundation for businesses to operate and expand, leading to increased production and trade.
- **Enhanced Productivity:** Well-maintained infrastructure can increase productivity by reducing downtime and transportation delays. This, in turn, can make regional industries more competitive and efficient.
- **Attracting Investment:** Regions with modern and well-maintained infrastructure are often more attractive to investors. Businesses are more likely to invest in regions with reliable transportation, utilities, and communication networks, as it reduces operational risks and costs.
- **Quality of Life:** Infrastructure repair can enhance the quality of life for residents by providing access to essential services such as clean water, sanitation, healthcare, and education. This can contribute to improved human development indicators and overall well-being.
- **Resilience and Disaster Mitigation:** Infrastructure repair can include upgrades to make infrastructure more resilient to natural disasters and climate change impacts. This can help protect communities and assets and reduce the long-term costs of recovery and reconstruction.

- **Social Equity:** Infrastructure repair can address disparities in access to essential services. It can benefit marginalized communities by providing them with equal access to transportation, utilities, and public facilities.

However, it is important to note that there can be negative impacts as well, including:

- **Disruption During Construction:** Repair projects can disrupt communities and businesses during the construction phase, leading to short-term challenges.
- **Costs and Budget Constraints:** Large-scale infrastructure repair projects can be costly, and they may strain regional budgets or lead to increased taxes or debt.
- **Environmental Concerns:** If not done carefully, infrastructure repair projects can have adverse environmental impacts, such as habitat disruption or water pollution.

Recent significant state, county, and local infrastructure projects within Region G include:

- **Butler County**
  - Bridge Replacement - Hickory Creek Bridge on SE Cole Creek Rd.
  - SW Ohio Street Rd/SW 20th St Intersection
  - K-254 Corridor Management Plan in Sedgwick and Butler counties to establish future land development and an access management approach.
- **Cowley County**
  - Repair of U.S. 166 bridge over the Walnut River.
  - Pavement replacement on nearly 9 miles of U.S. 77 between Arkansas City and the Walnut River.
  - Intersection improvements at 222nd Road.
  - 232nd Road replacement, 2.5 miles south, 3.5 miles west of Dexter over Grouse Creek.
- **Harper County**
  - Repairs of N.W. 110 Avenue and bridge, 3.7 miles north of Attica over W. Branch Bluff Creek
  - SCTELCOM is expanding broadband service to extremely rural areas in Harper County in areas surrounding the cities of Anthony, Attica and Harper.
- **Harvey County**
  - Repairs to 60th Street and bridge, 9.3 miles east of I-135 over East Whitewater Creek
  - Traffic sign project on four highways including U.S. 50, K15, K-89 and K-196. The project length is about 54 miles.
  - Extension of passing lanes on U.S. 50 at the Harvey/Marion county line.
- **Kingman**
  - Repairs to NE 50 Street from NE 150 Ave to NE 170 Avenue
  - Repairs to U.S. 54 from the Pratt County line east to the west Ninnescah River bridge.
  - K-42 bridge replacement over Chikaskia River drainage.
  - New development at Kingman Airport, including the construction of a full-length 4,300 foot parallel taxiway.
- **Marion County**
  - Repairs to 310 Road, 2.0 miles south and 0.9 miles east of Tampa
  - A new commercial wind energy farm was constructed in the northwest part of Marion County and operational in 2019.
  - Reconstruction of Kanza Road, US56 to 180<sup>th</sup>, including 13 miles of Nighthawk between Peabody and Canada, five miles of 330th east of Tampa and 2.2 miles of 60th from Peabody west to Harvey County line.
- **McPherson County**
  - Capital Improvement Project, Hulse Street Reconstruction
  - Capital Improvement Project , Eagles Wings Unit 3

- Capital Improvement Project , Lakeside Park Bank Restoration (Park Department)
- Capital Improvement Project , Wall Park (Mingenback Lake) Bank Restoration
- Capital Improvement Project , - South Walnut Street Reconstruction
- Public Works Project, Elm Street Reconstruction
- Public Works Project , Ash Street Reconstruction
- US-56/K-153, Hwy 81 Bypass Intersection Reconstruction
- Reno County
  - K-14 in Reno and Rice counties, including a mill and hot-mix-asphalt overlay and bridge repair.
  - Bridge repair on Lerado Road between Fountain Green Road and Pleasant Valley Road.
  - Bridge Load Rating Program repair on Castleton Road Bridge between Sego Road and Fairview Road.
  - Bridge Load Rating Program repair Peace Road Bridge between Sun City Road and Silver Lake Road
  - Bridge replacement on 69th Avenue between Yaggy Road and Wilson Road.
  - Bridge replacement on Olcott Road between Maple Grove Road and Boundary Road will be closed to all through traffic
  - Bridge replacement on Broadview Road between Morgan Avenue and Mills Avenue.
  - Kansas Department of Commerce BASE grant award of \$2,000,000 to Growth, Inc., a division of the Hutchinson / Reno County Chamber of Commerce for planning for infrastructure for industrial development in Reno County along the K96 corridor.
  - Construction of the Northwest bypass, realigning K-96 highway between Nickerson and Sterling.
- Rice County
  - Repairs to 22nd Road and bridge, 6.0 miles east, 1.8 miles north of Sterling over Cow Creek
  - Replacement of a K-14 bridge over the Cow Creek drainage, 9.7 miles north of the Reno County line between Sterling and Lyons.
- Sedgwick County
  - Repairs on North Oliver, south of East 45th Street.
  - Dry Creek Estates Street Improvements.
  - Bridge repairs on Greenwich Road, between 109th and 117th Streets North.
  - Drainage channel improvements from 87th to 79th Street South.
  - Bridge repair on 151st Street West over the Ninnescah River.
  - Repairs of Oaklawn Stormwater Sewer at 47th Street South /Arkansas River.
  - Bridge repairs on 391st Street West over the South Fork Ninnescah River.
  - Bridge repairs on 103rd Street South between 119th and 135th Streets West.
  - Bridge repairs on Ridge Road between 61st and 69th Streets North & 811-B-2423; Bridge on Ridge Road between 109th and 117th Streets North.
  - Bridge repairs on 143rd Street East between 69th and 77th Streets North.
  - Bridge repairs on 85th Street North between Oliver Ave. and Woodlawn Blvd.
  - Bridge repairs on 151st Street West between 85th and 93rd Streets North.
  - Bridge repairs on Greenwich Road Between 117th and 125th Streets North.
  - The City of Wichita & Sedgwick County awarded a \$21,000,000 BUILD Grant to Conduct repairs and improvements on the Wichita North Junction (where I-135, I-235, K-254, and K-96 meet in North Wichita).
  - Kansas Department of Commerce \$4,716,225 BASE grant award to City of Bel Aire for Sunflower Commerce Park sewer infrastructure.
  - Kansas Department of Commerce \$3,000,000 BASE grant award to City of Bel Aire for Exploration Place.
  - Kansas Department of Commerce \$2,000,000 BASE grant award to Hutton Corporation for Maize Industrial Park.

- Kansas Department of Commerce \$1,150,554 BASE grant award to Groover Labs for CyberLink infrastructure expansion.
- The Capital Project Funds Broadband Infrastructure Program awarded AT&T \$2,206,491 – to increase broadband connectivity to unserved locations on the fringes of the Wichita metro area, targeting multi-dwelling unit properties.
- Sumner County
  - Repairs on North Oliver Road, 2.1 miles north of Belle Plaine over Cowskin Creek Tributary.
  - I-35/ Kansas Turnpike Authority project for drainage improvements.
  - Replacement of the U.S. 81 bridge over Ninnescah River drainage three miles north of the K-55 junction.
  - Construction of a biofuel plant on 144 acres.
- Regional
  - The Kansas Office of Broadband is installing a 682-mile fiber optic network to connect Liberal to Garden City, Pratt to Wichita, Kismet to Minneola, Wichita to Pittsburg, and Pittsburg to Overland Park.
  - The Capital Project Funds Broadband Infrastructure Program awarded the Butler Rural Electric Cooperative Association (Butler, Cowley, Sedgwick, and Sumner counties) \$9,815,894 to bring broadband connectivity.

Detailed information concerning development trends may be found in the Jurisdictional Comprehensive Plans. These plans, and on ground observations suggest that Kansas Region G’s development continues to follow development described by planners in the previous HMP, specifically small-scale development projects over small areas. On average, the majority of undeveloped land has remained so over the life of the previous HMP, and is expected to do so over the life of this plan. In some of the Regions’ more rapidly developing communities, such as Wichita, building activity has increased proportionally to match the incoming population. This data is reflected in both the previously presented population and housing data.

All current and future development is potentially vulnerable to the hazards identified in this plan. However, many of the participating jurisdictions of Kansas Region G have taken steps to reduce the potential impacts through the utilization of building codes and comprehensive plans. A comprehensive plan outlines the long-term vision and goals for the development of a city or municipality. It serves as a strategic guide for future growth, land use, infrastructure, and community development. Comprehensive plans are typically created through a collaborative process involving local government officials, city planners, residents, and various stakeholders. A key component of a comprehensive plan is land use planning, which defines how land will be used, including residential, commercial, industrial, recreational, and green spaces.

Finally, there have been no major changes in existing jurisdictional facilities, either through construction or renovation. Additionally, a review of jurisdictional budgets, as possible, does not indicate any future projects related to increasing the resilience of any existing facilities or of construction facilities. As such, it is expected that the vulnerability of jurisdictional facilities is generally the same as during the life of the previous plan and will remain generally the same during the life of this plan.

### **3.10 Agricultural Data**

Agriculture forms a very important part of both the economic and social fabric of Kansas Region G. USDA National Agricultural Statistics Service data from 2007, 2012, and 2017 (the latest available data) was used to develop agricultural information for the region, as detailed in the following table and charts:

**Table X: Kansas Region G Regional Agricultural Data**

Jurisdiction	Year	Number of Farms	Farm Acreage	Market Value of Products Sold
Kansas Region G	2007	11,617	6,323,813	\$1,297,427,000
	2012	11,121	6,351,698	\$1,968,518,000
	2017	10,576	6,344,251	\$1,617,767,000

Source: USDA National Agricultural Statistics Service

**Chart X: Kansas Region G Number of Farms, 2007 – 2017**

Source: USDA

**Chart X: Kansas Region G Farm Acreage, 2007 – 2017**

Source: USDA

**Chart X: Kansas Region G Market Value of Agricultural Products Sold, 2007 – 2017**

Source: USDA

The following table breaks down USDA National Agricultural Statistics Service data from 2007, 2012, and 2017 (the latest available data) on a county level:

**Table X: Kansas Region G County Level Agricultural Data**

Jurisdiction	Year	Number of Farms	Farm Acreage	Market Value of Products Sold
Butler County	2007	1,427	787,290	\$235,138,000
	2012	1,353	768,149	\$282,338,000
	2017	1,471	798,408	\$180,941,000
Cowley County	2007	1,027	575,584	\$66,214,000
	2012	990	574,614	\$108,976,000
	2017	921	563,453	\$96,515,000
Harper County	2007	495	481,291	\$93,424,000
	2012	495	506,006	\$109,644,000
	2017	477	489,183	\$93,148,000
Harvey County	2007	829	338,598	\$103,676,000
	2012	744	339,584	\$161,716,000
	2017	752	343,952	\$139,975,000
Kingman County	2007	876	546,231	\$52,051,000
	2012	808	542,010	\$103,188,000
	2017	740	516,728	\$78,779,000
Marion County	2007	974	599,022	\$111,206,000
	2012	981	596,296	\$151,478,000
	2017	892	567,828	\$146,508,000
McPherson County	2007	1,142	566,309	\$119,750,000
	2012	1,142	571,577	\$208,482,000
	2017	988	558,094	\$155,036,000

**Table X: Kansas Region G County Level Agricultural Data**

<b>Jurisdiction</b>	<b>Year</b>	<b>Number of Farms</b>	<b>Farm Acreage</b>	<b>Market Value of Products Sold</b>
Reno County	2007	1,749	780,893	\$171,249,000
	2012	1,633	789,525	\$267,318,000
	2017	1,552	788,966	\$216,729,000
Rice County	2007	580	428,422	\$184,927,000
	2012	535	457,603	\$258,181,000
	2017	470	463,294	\$235,547,000
Sedgwick County	2007	1,419	510,308	\$85,109,000
	2012	1,344	486,723	\$148,484,000
	2017	1,360	496,568	\$118,918,000
Sumner County	2007	1,099	709,865	\$74,683,000
	2012	1,096	719,611	\$168,713,000
	2017	953	757,777	\$155,671,000

### 3.11 Potential Impacts of Climate Change

There is a scientific consensus that climate change is occurring, and recent climate modeling results indicate that extreme weather events may become more common. Rising average temperatures produce a more variable climate system which may result in an increase in the frequency and severity of some extreme weather events including longer and hotter heat waves (and by correlation, an increased risk of wildfires), higher wind speeds, greater rainfall intensity, and increased tornado activity. Where applicable, and with proper scientific evidence, potential climate change factors will be addressed in subsequent sections for relevant identified hazards.

Data from the NOAA NCEI Kansas 2022 State Climate Summary indicates the following concerning the climate change in the state:

- Temperatures have risen approximately 1.5° Fahrenheit since the beginning of the 20<sup>th</sup> century.
- Recent multiyear periods have been among some of the warmest on record for Kansas, comparable to the extreme heat of the Dust Bowl era of the 1930s.
- Greater warming has occurred in the winter and spring months.
- The frequency of extreme precipitation events has been highly variable but shows a general increase, with the number of 2-inch precipitation events was well above average during the 2015–2020 period.
- Although projections of overall annual precipitation are uncertain, summer precipitation is projected to decrease across the state while winter precipitation is projected to increase.
- The increase in extreme precipitation events has been more pronounced in the eastern part of the state.
- The intensity of future droughts is projected to increase.
- Drought, combined with the extreme summer heat, is expected to have significant negative impacts on crop yields, livestock production, and pasture conditions.
- The frequency and severity of wildfires is projected to increase.

## Section 4 – Hazard Identification and Risk Assessment

### 4.1 Introduction

The goal of this hazard mitigation is to reduce the future impacts of hazards, including deaths and injuries, property damage, and disruption to local and county economies, and to further reduce the amount of public and private funds spent to assist recovery. To complete this goal, hazard mitigation decision-making in this plan has been based on a robust risk assessment, completed to identify natural, human caused, and technological hazards that represent a risk to Kansas Region G. The following provide a definition of the risk assessment terms used during this assessment:

- **Hazard:** An act or phenomenon that has the potential to produce harm or other undesirable consequences to a person or thing.
- **Exposure:** The people, property, systems, or functions that could be lost to a hazard. Generally, exposure includes what lies in the area the hazard could affect.
- **Vulnerability:** Vulnerability is susceptibility to physical injury, harm, damage, or economic loss. It depends on an asset's construction, contents, and economic value of its functions.
- **Risk:** A function of hazard, vulnerability, and exposure. It refers to the likelihood of an event resulting in an adverse condition that causes injury or damage.

In order to accomplish this assessment, all relevant natural, human caused, and technological hazards, potential vulnerabilities, and exposures were identified. As potential hazards, vulnerabilities, and exposure are identified Kansas Region G can continue to develop a strategy to identify and prioritize mitigation action to defend against these potential risks.

### 4.2 Declared Federal Disasters

The Robert T. Stafford Disaster Relief and Emergency Assistance Act (42 U.S.C. §§ 5121-5206) provides for the Federal support of State and local governments and their citizens when impacted by an overwhelming disaster. The Robert T. Stafford Disaster Relief and Emergency Assistance Act, as amended, establishes the process for requesting a Presidential disaster declaration and defines the type assistance available.

If it is apparent that a Presidential disaster declaration may be necessary to assist in the recovery of an impacted area, Counties within Kansas Region G and FEMA Region VII will conduct a Preliminary Damage Assessment (PDA). This assessment is used to determine:

- The extent of the event.
- The impact of the event on individuals and public facilities.
- The types of federal assistance that may be needed.

Once the PDA is complete, and if a determination is made that the damages exceed available State of Kansas resources, the Governor may submit through FEMA Region VII a declaration request to the President.

A major disaster declaration provides a wide range of federal assistance programs for individuals and public infrastructure, including funds for both emergency and permanent work. Not all programs, however, are activated for every disaster. The determination of which programs are authorized is based on the types of assistance specified in the Governor's request and the needs identified during the initial and subsequent PDAs. FEMA disaster assistance programs may include:

- Individual Assistance
- Public Assistance
- Hazard Mitigation

To recognize and encourage mitigation, FEMA considers the extent to which mitigation measures contributed to the reduction of disaster damages. This could be especially significant in those disasters where, because of mitigation, the estimated public assistance damages fell below the per capita indicator.

Historical events of significant magnitude or impact can result in a Presidential Disaster Declaration. The MPC reviewed the historical federal disaster declarations to assist in hazard identification. The following table details Disaster Declarations for Kansas Region G:

**Table X: Kansas Region G Presidentially Declared Disasters**

<b>Designation</b>	<b>Declaration Date</b>	<b>Incident Type</b>	<b>Counties</b>	<b>Assistance</b>
DR-4640-KS	03/22/2022	Severe Storms and Straight-Line Winds	Sumner	\$12,159,785
DR-4504-KS	03/29/2020	Covid-19	Butler, Cowley, Harper, Harvey, Kingman, Marion, McPherson, Reno, Rice, Sedgwick, and Sumner	\$371,502,285
DR-4499-KS	08/14/2019	Severe Storms, Straight-Line Winds, Flooding, Tornadoes, Landslides, and Mudslides	Butler, Cowley, Harper, Harvey, Kingman, Marion, McPherson, Reno, Rice, and Sumner	\$51,157,548
DR-4417-KS	03/20/2019	Severe Storms, Straight-Line Winds, and Flooding	Cowley, Kingman, Reno, and Sumner	\$3,509,374
DR-4403-KS	10/19/2018	Severe Storms, Straight-Line Winds, and Flooding	Kingman	\$4,545,539
DR-4287-KS	10/20/2016	Severe Storms and Flooding	Cowley, Kingman, Sedgwick, and Sumner	\$6,745,588
DR-4230-KS	07/20/2015	Severe Storms, Tornadoes, Straight-Line Winds and Flooding	Butler, Cowley, Harper, Harvey, Marion, McPherson, Rice, Sumner	\$11,018,053
DR-4063-KS	05/24/2012	Severe Storms, Tornadoes, Straight-Line Winds and Flooding	Harper, Rice, Sedgwick, and Sumner	\$6,923,919

The following chart represents Presidentially Declared Disasters in the Kansas Region G by year, starting in 1955:

**Chart X: Kansas Region G Presidentially Declared Disasters by Year**

Source: FEMA

The President can declare an emergency for any occasion or instance when the President determines federal assistance is needed. Emergency Declarations supplement State and local or Indian tribal government efforts in providing emergency services, such as the protection of lives, property, public health, and safety, or to lessen or avert the threat of a catastrophe. The total amount of assistance provided for in a single emergency may not exceed \$5,000,000. The following types of assistance are available under an Emergency Declaration:

- Public Assistance, Categories A (debris removal) and B (emergency protective measures)
- Individual Assistance, the Individuals and Households Program

The MPC reviewed the historical federal disaster declarations to assist in hazard identification. The following table details Emergency Declarations for Kansas Region G.

**Table X: Kansas Region G Emergency Declarations**

Designation	Declaration Date	Incident Type	Counties	Public Assistance
EM-3481-KS	03/13/2020	Kansas Covid-19	All	-

Note: -: Data unavailable

The Governor, or the Governor's Authorized Representative, may submit a request for a fire management assistance declaration as required. FEMA will approve declarations for fire management assistance when it is determined that a fire or fire complex on public or private forest land or grassland threatens such destruction as would constitute a major disaster.

The MPC reviewed the historical fire management declarations to assist in hazard identification. The following table details fire management declarations for Kansas Region G.

**Table X: Kansas Region G Fire Management Declarations**

Designation	Declaration Date	Incident Name	Counties	Public Assistance	Emergency Work
FM-5425-KS	5/5/2022	Kansas Cottonwood Fire Complex	Harvey and Reno	\$464,403	\$59,033

### 4.3 Identified Potential Hazards

One of the first steps in developing a hazard assessment is to identify the hazards that have a reasonable risk of occurring. Proper identification allows for appropriate and well-planned action in order to mitigate the extent and cascading impacts of an incident. Furthermore, while not all disaster contingencies can be planned for, applying an all-hazards approach to the mitigation process does yield greater awareness and better preparedness for unforeseen hazard incidents overall.

The MPC met to discuss previously identified hazards and deliberate on any changes or additions to the regional hazard profile. A thorough and comprehensive revision of data for each hazard was completed as part of this plan update.

Additionally, this plan has worked, as per FEMA recommendations, to merge similar hazards together with the aim of both simplifying the usage of the plan and reducing duplication of effort.

The MPC confirmed the following natural hazards that may impact the Kansas Region G:

**Table X: Kansas Region G Identified Natural Hazards**

<b>Hazard</b>	<b>Included in 2019 HMP</b>	<b>Notes</b>
Agricultural Infestation	Yes	-
Dam or Levee Failure	Yes	-
Drought	Yes	-
Earthquake	Yes	-
Extreme Temperatures	Yes	-
Flood	Yes	-
Severe Thunderstorms	Yes	Combined hail, lightning, and high and thunderstorm winds
Severe Winter Weather	Yes	Renamed from Winter Storm
Tornado	Yes	-
Wildfire	Yes	Renamed with greater focus on wildfires

The MPC confirmed the following human caused and technological hazards that may impact the Kansas Region G, as listed below:

**Table X: Kansas Region G Identified Human Caused and Technological Hazards**

<b>Hazard</b>	<b>Included in 2019 HMP</b>	<b>Notes</b>
Cybersecurity Incident	Yes	New
Hazardous Materials Incident	Yes	Renamed from chemical incident
Infrastructure Failure	Yes	Renamed from Utility/Infrastructure Failure
Terrorism	Yes	Now includes active shooter
Transmissible Disease	Yes	Renamed from Major Disease Outbreak

Based on discussion with the MPC, a lack of identified risk or history, and/or geographic improbability, civil unrest, expansive soils, landslide, land subsidence, and radiological incident (hazards identified in the State of Kansas Hazard Mitigation Plan) were not included in the scope of this plan.

#### **4.4 Hazard Planning Significance**

For the purposes of this plan, hazard planning significance refers to the relevance of the identified hazard to the jurisdictions of Kansas Region G when calculating risk and vulnerability. In order to help quantify the planning significance for a hazard, data was reviewed on two levels, federal (National Risk Index data) and local (researched plan data relevant to occurrence and vulnerability on a county and local level). This allowed for a comparison between data sets for each hazard type and allowed for a summation at the county level. It is recognized that inconsistencies in methodologies and data make it difficult to make a direct comparison across all data levels. However, as possible, collected data was translated into a unified model that accounted for any variability in data and methodologies.

The result of this assessment provides a larger scale snapshot of how the Kansas Region G jurisdictions view risk and allowed for integration of hazard data in to the HMP.

For natural hazards, data from this plan was vetted by local Emergency Managers and participating jurisdictions to ensure it matched local conditions. Additionally, the Kansas Region G utilized FEMA's National Risk Index (NRI) which provides a method of understating high and local level jurisdictional vulnerability. FEMA's NRI dataset and online tool was used to help determine local community risk for identified natural hazards in this HMP.

The risk equation behind the Risk Index includes three components, Expected Annual Loss (EAL), social vulnerability (previously discussed), and community resilience (previously discussed). The dataset supporting EAL provides estimates measured in 2022 U.S. dollars. The datasets supporting the social vulnerability and community resilience components have been standardized using a minimum-maximum normalization approach prior to being incorporated into the NRI risk calculation.

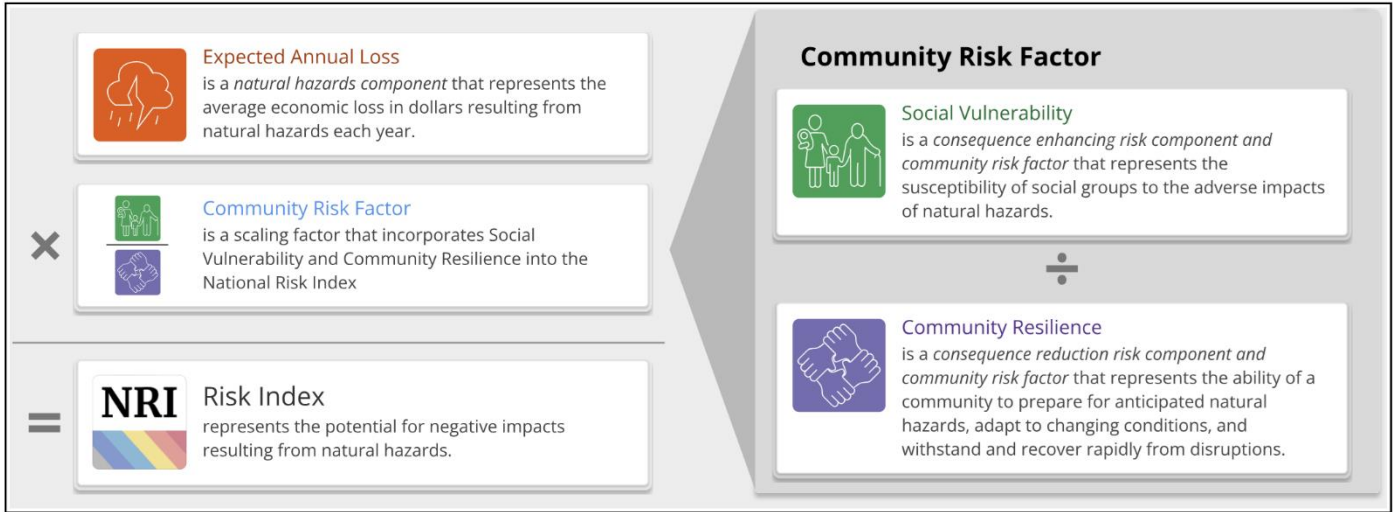

As part of the NRI, EAL represents the average economic loss in dollars resulting from a hazard each year. It quantifies loss for relevant consequence types, buildings, people, and agriculture. An EAL score and rating represent a community's relative level of expected losses each year when compared to all other communities at the same level. EAL is calculated using an equation that includes exposure, annualized frequency, and historic loss ratio risk factors. Exposure is a factor that measures the building value, population, and agriculture value potentially exposed to a natural hazard occurrence. Annualized frequency is a factor that measures the expected frequency or probability of a hazard occurrence per year. Historic loss ratio is a factor that measures the percentage of the exposed consequence type value (building, population, or agriculture) expected to be lost due to an occurrence. EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk.

To calculate Risk Index values, the NRI generates a Community Risk Adjustment to scale EAL values up or down, depending on their community risk factors, increasing with social vulnerability and decreases with community resilience. For a jurisdiction, a higher social vulnerability results in a higher Risk Index value while higher community resilience results in a lower Risk Index value.

Using these three components, Risk Index values are calculated for each jurisdiction (county and Census tract). The calculated Risk Index values form an absolute basis for measuring Risk within the NRI, and they are used to generate Risk Index percentiles and ratings across communities.

The risk equation behind the NRI is as follows:

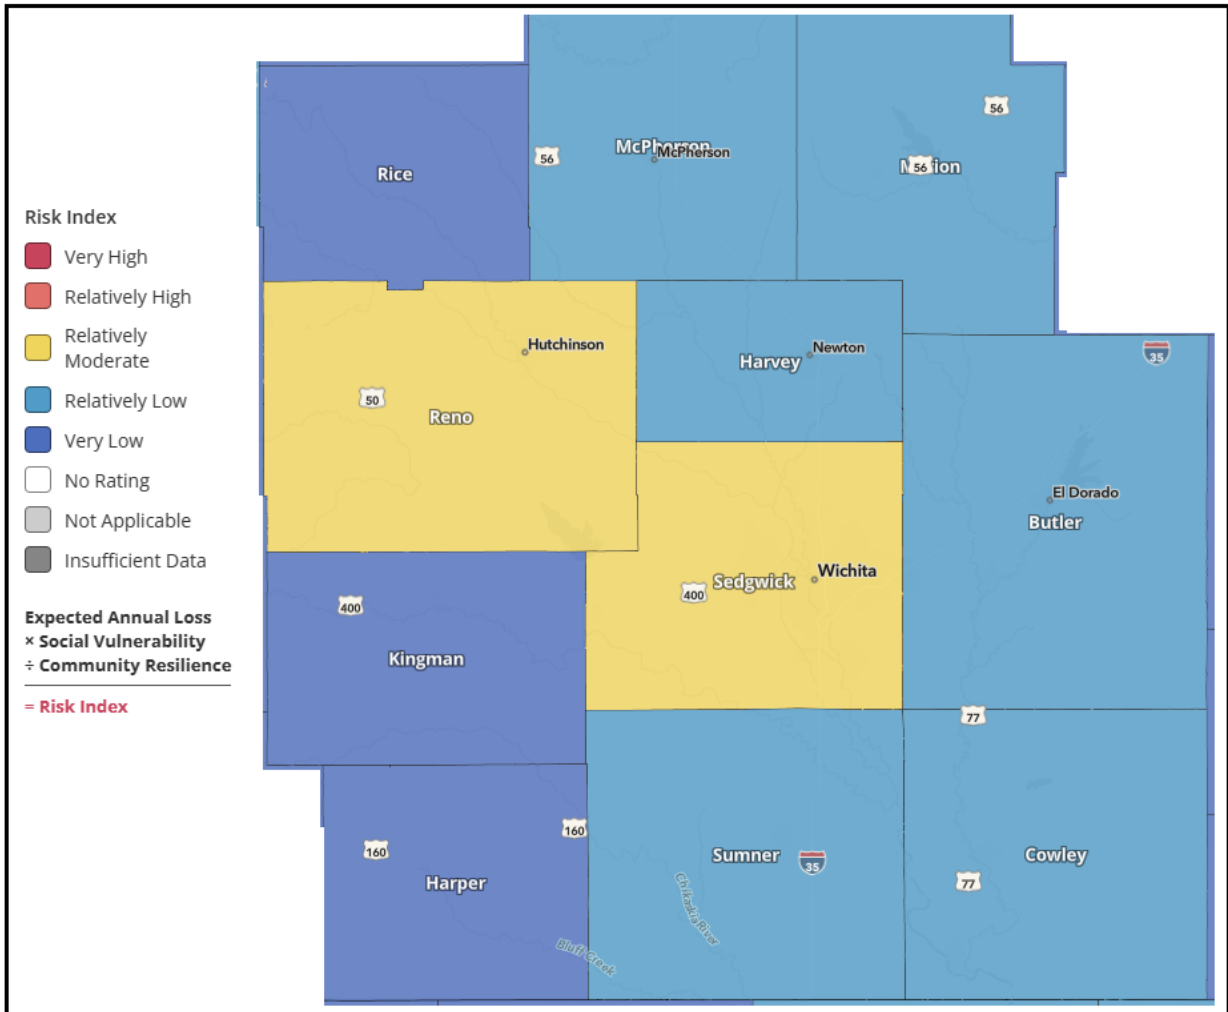

Figure X: FEMA NRI

For both the Risk Index and EAL there is a qualitative rating that describes the nature of a community's score in comparison to all other communities at the same level, ranging from "Very Low" to "Very High." Because all ratings are relative, there are no specific numeric values that determine the rating.

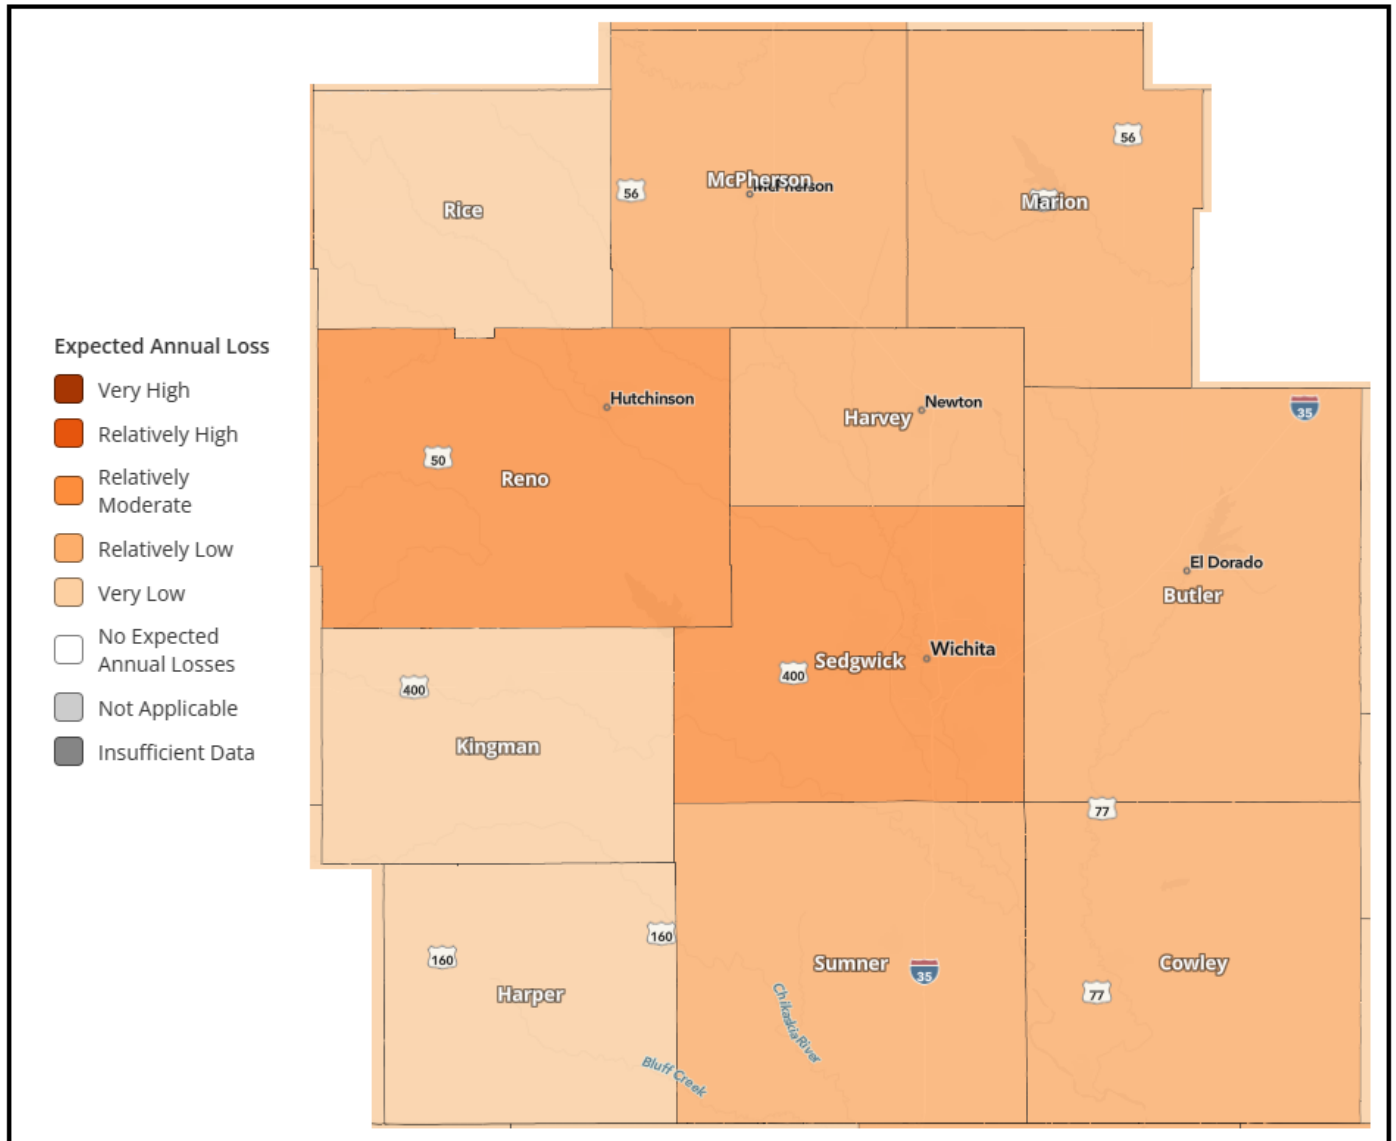

The following maps indicate the composite NRI and EAL for Kansas Region G counties:

**Map X: Kansas Region G FEMA NRI**

Source: FEMA NRI

Map X: Kansas Region G FEMA EAL

Source: FEMA NRI

The following table indicates the FEMA NRI and EAL analysis for each participating Kansas Region G county for all identified natural hazards:

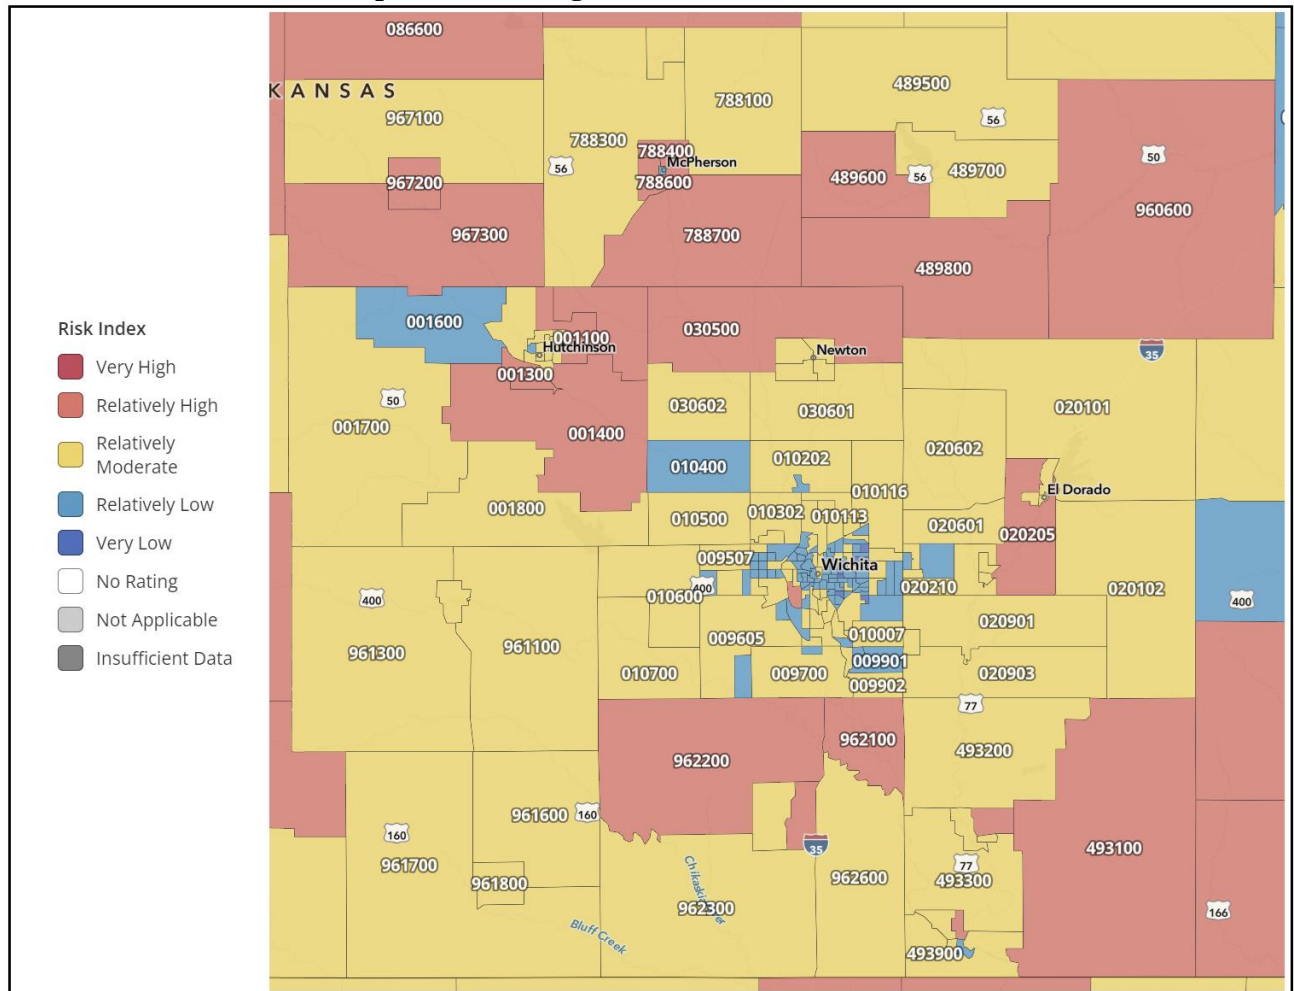

**Table X: Kansas Region G FEMA NRI and EAL for All Natural Hazards**

County	Risk Index	EAL
Butler	Relatively Low	Relatively Low
Cowley	Relatively Low	Relatively Low
Harper	Very Low	Very Low
Harvey	Relatively Low	Relatively Low
Kingman	Very Low	Very Low
Marion	Relatively Low	Relatively Low
McPherson	Relatively Low	Relatively Low
Reno	Relatively Moderate	Relatively Moderate
Rice	Very Low	Very Low
Sedgwick	Relatively Moderate	Relatively Moderate
Sumner	Relatively Low	Relatively Low

Source: FEMA NRI

To help understand the risk and vulnerability to the identified hazards in this HMP for participating jurisdictions, risk index and EAL mapping from the FEMA NRI was run on a census tract level. As the NRI does not generate mapping for individual jurisdictions, census tract analysis is the closest analogue available to understand individual jurisdiction conditions. The following maps indicate the composite NRI and EAL for Kansas Region G census tracts:

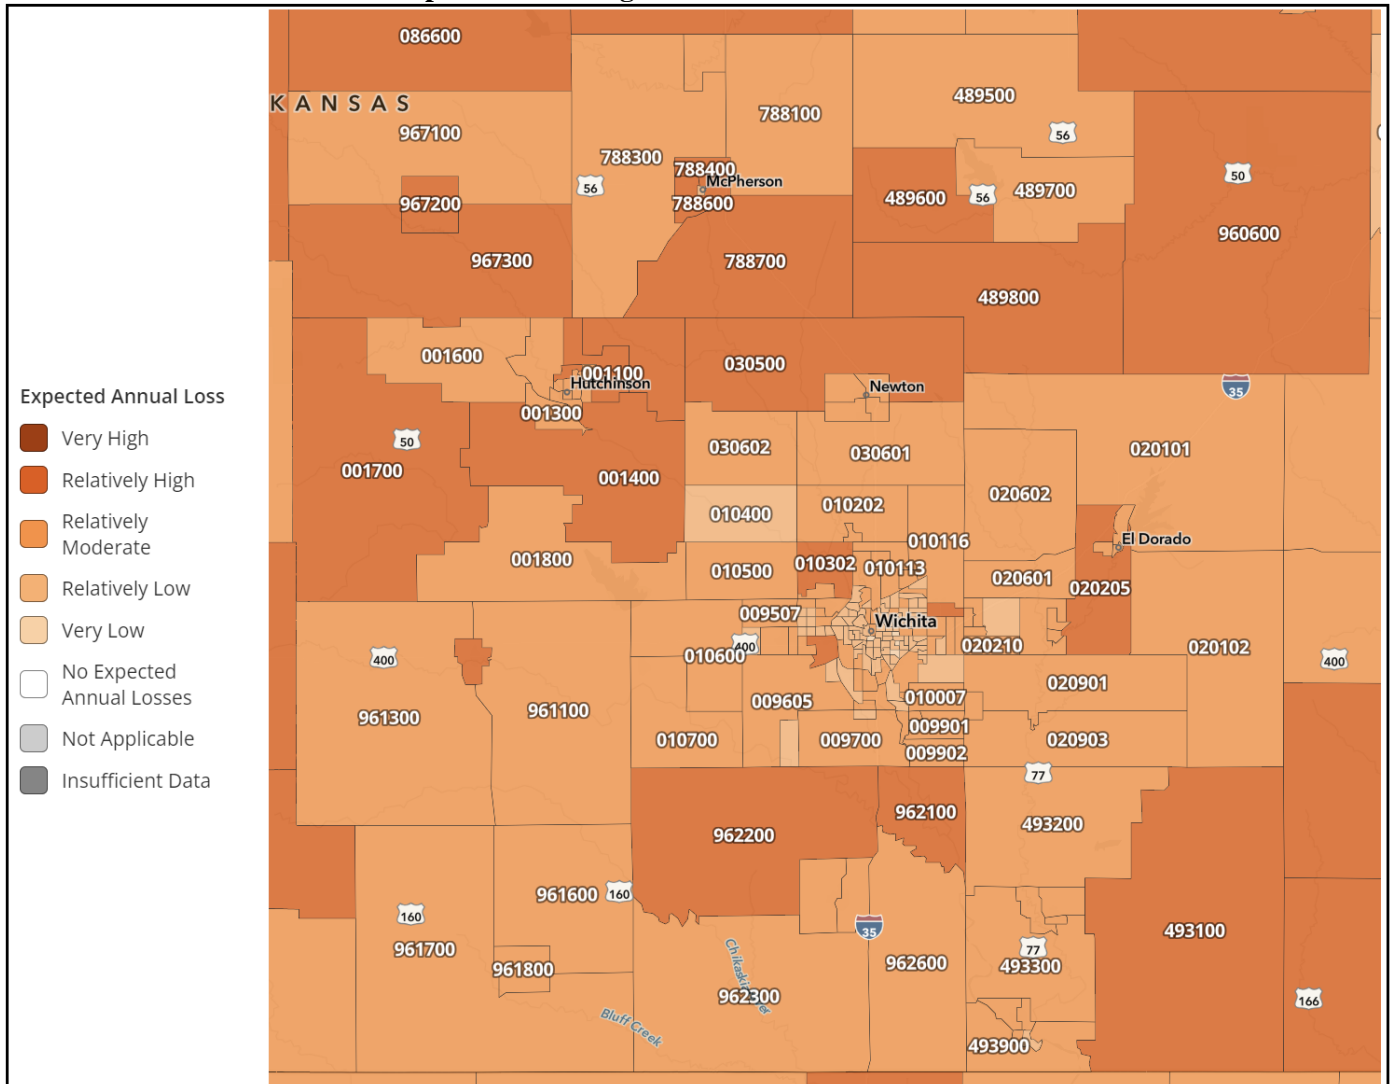

**Map X: Kansas Region G Jurisdiction FEMA NRI**

Source: FEMA NRI

**Map X: Kansas Region G Jurisdiction FEMA NRI**

Source: FEMA NRI

The following hazard specific sections provide NRI and EAL mapping by census tract to visually indicate potential vulnerability and loss. Augmenting these maps, full NRI census tract data is available in Appendix D detailing specific information for each census tract in each Kansas Region G county.

As the FEMA NRI does not provide data concerning human caused and technological caused hazards the hazard rating methodology used on the 2019 Kansas Region G HMP was followed to help determine hazard planning significance for the county level. A standardized methodology, which allows for greater flexibility and room for subject matter expertise, was developed to compare different hazards' risk. Where possible, this method prioritizes hazard risk based on a blend of quantitative factors extracted from available data sources. These factors include:

- Probability of occurrence (expected frequency)
- Probable magnitude of impact (estimated strength, magnitude, onset, duration, and damage potential)
- Warning time of hazard occurrence (what type of warning can be expected)
- Duration of event (how long will hazard conditions exist)

The scores for the four hazard rating factors (probability of hazard occurrence, magnitude, warning time, and duration) were given a criticality rating from one to four (four being the highest concern or impact) and summed at a county level for each natural hazard using the following formula:

(Probability x 0.45)

+

(Magnitude x 0.30)

+

(Warning Time x 0.15)

+

(Duration x 0.10)

The levels of planning significance were identified, as follows:

Table X: Planning Significance Rating Range		
Planning Significance	Score Range	
	Low Score	High Score
High	3.0	4.0
Moderate	2.0	2.9
Low	1.0	1.9

The terms high, moderate, and low indicate the level of planning significance for each hazard, and do not indicate the potential impact of a hazard occurring. Hazards rated with moderate or high planning significance were more thoroughly investigated and discussed due to the availability of data and historic occurrences, while those with a low planning significance were generally addressed due to lack of available data and historical occurrences.

The result of this assessment provides a larger scale snapshot of how participating counties view risk and allowed for integration of hazard data in to this HMP. This allowed for a comparison between counties for each human caused and technological hazard type. It is recognized that inconsistencies in methodologies and data make it difficult to make a direct comparison, however, as possible, collected data was translated into a unified model that accounted for any variability in data and methodologies.

The following tables show the hazard planning significance of natural hazards and technological and human caused hazards for Kansas Region G.

Table X: Kansas Region G Technical and Human Caused Hazard Planning Significance						
Hazard	Cybersecurity Incident	Hazardous Materials Incident	Infrastructure Failure	Radiological Incident	Terrorism	Transmissible Disease
Butler	High	Moderate	Moderate	Low	Low	Moderate
Cowley	High	Moderate	Moderate	Low	Low	Moderate
Harper	High	Moderate	Moderate	Low	Low	Moderate
Harevy	High	Moderate	Moderate	Low	Low	Moderate
Kingman	High	Moderate	Moderate	Low	Low	Moderate
Marion	High	Moderate	Moderate	Low	Low	Moderate
McPherson	High	Moderate	Moderate	Low	Low	Moderate
Reno	High	High	Moderate	Low	Low	Moderate
Rice	High	Moderate	Moderate	Low	Low	Moderate
Sedgwick	High	High	Moderate	Low	Low	High
Sumner	High	Moderate	Moderate	Low	Low	Moderate

Calculations for the planning significance for each human caused and technological hazard on a county basis are presented in the corresponding hazard section.

4.5 Hazard Occurrence and Assessment Data

NOAA’s NCEI Storm Events Database was used as the primary source of information for previous occurrences of storm

events. Full data sets from were used, where applicable, for hazard occurrence and impact data. Where data sets were unavailable for a hazard, local reporting from participating jurisdictions was relied upon.

It is worth noting that damage estimates indicated by the NCEI are often artificially low. This underreporting is a result of the way the events are reported to the NCEI, often by the local and/or National Weather Service (NWS) office. When reporting an event oftentimes the NWS office does not have access to the actual damage assessment resulting from that event. As such, the report often details a very low amount or zero-dollar amount for damages. Most of the events from NCEI are not associated with a federal emergency or disaster. If the event occurred at the same time as an event that was later determined to be a federal emergency or disaster, it is included with the NCEI data even if it occurred in a county not included in the federal declaration.

Data was also obtained and utilized using Hazus-MH, Version 2.2 SP1, a program administered by the FEMA used to model losses. Modelling for hazards uses Hazus analysis to estimate losses and projected impacts from historical and annualized hazard events. Hazus default data was used in the analysis, including the 2020 Census and other State and Federal government facility databases.

#### **4.6 Jurisdictional Critical Facilities**

Certain facilities have a net positive value on the community as they contribute to the public good by facilitating the basic functions of society. These facilities maintain order, public health, education, and help the economy function. Additionally, there are infrastructure and facilities integral to disaster response and recovery operations. Conversely, some infrastructure and facilities are of extreme importance due to the negative externalities created when they are impacted by a disaster. What fits these definitions will vary slightly from community to community, but the definitions remain as a guideline for identifying critical facilities and infrastructure. Kansas Region G maintains critical facility details under separate cover for security purposes. For this HMP, it is assumed that all critical facilities are at equal risk to non-point hazard occurrence but may have varying risk to point hazard occurrence (dam and levee failure and flood). Data concerning critical facilities potentially impacted by these point hazards, as available, is detailed under the respective hazard section.

#### **4.7 Hazard Profiles**

Each identified hazard is profiled in the subsequent sections, with the level of detail varying based on available information. Sources of information are cited in the detailed hazard profiles below.

For hazards that have a higher chance of occurrence for specific jurisdictions throughout Kansas Region H, a discussion is provided as to the differing levels of potential vulnerability. All other hazards have been determined to have an equal chance of occurrence for all participating jurisdictions.

The following hazards are presented in alphabetical order, and not by planning significance, for ease of reference. Please note that natural hazards are presented in order first, followed by human caused and technological hazards.

## 4.8 Agricultural Infestation

### 4.8.1 Hazard Description

Agricultural infestation is the naturally occurring infection of vegetation, crops or livestock with insects, vermin (to include lice, roaches, mice, coyote, fox, fleas, etc.), or diseases that render the crops or livestock unfit for consumption or use. The levels and types of agricultural infestation will vary according to many factors, including cycles of heavy rains and drought. A certain level of agricultural infestation is normal; however, infestation becomes an issue when the level of an infestation escalates suddenly, or a new infestation appears, overwhelming normal control efforts. Infestation of crops or livestock can pose a significant risk to state and local economies due to the dominance of the agricultural industry.

Onset of agricultural infestation can be rapid. Controlling an infestation's spread is critical to limiting impacts through methods including quarantine, culling, premature harvest and/or crop destruction when necessary. Duration is largely affected by the degree to which the infestation is aggressively controlled but is generally more than one week. Maximizing warning time is also critical for this hazard and is most affected by methodical and accurate monitoring and reporting of livestock and crop health and vigor, including both private individuals and responsible agencies.

### 4.8.2 Location & Extent

Of key concern regarding this hazard is the potential introduction of a rapid and economically devastating foreign animal disease, including Foot and Mouth disease and Bovine Spongiform Encephalopathy disease. Because Kansas is a major cattle state, with cattle raised locally as well as imported into the state, the potential for highly contagious diseases such as these is a continuing, significant threat. The loss of production, death of animals, and other lasting problems resulting from an outbreak could cause continual and severe economic losses, as well as widespread unemployment.

Of particular concern are Confined Animal Feeding Operations (CAFOs) facilities, defined as facilities with 300 or more animal units. The CAFO facilities are regulated by the Kansas Department of Health & Environment (KDHE), Bureau of Water, and Livestock Waste Management. The CAFO includes beef, dairy, sheep, swine, chicken, turkey, and horses. The following is a list of the number of CAFOs per county, using the latest available data, in Kansas Region G:

- Butler County: 122
- Cowley County: 31
- Harper County: 12
- Harvey County: 89
- Kingman County: 30
- Marion County: 227
- McPherson County: 103
- Reno County: 152
- Rice County: 31
- Sedgwick County: 75
- Sumner County: 28

Knowing where diseased and at-risk animals are, where they've been and when, is important to ensuring a rapid response when animal disease events take place. The Kansas Department of Agriculture (KDA), Division of Animal Health monitors and reports on animal reportable diseases. Producers are required by state law to report any of the reportable animal diseases.

Kansas Region G is also susceptible to various forms of crop infestations and disease. The following major crops are particularly susceptible to infestation:

- **Wheat:** Kansas Region G is part of the Great Plains Wheat Belt. Wheat is susceptible to infestations by pests including insects like the Hessian fly, aphids, and wheat stem sawflies, as well as diseases like wheat rust.
- **Corn and Sorghum:** Staple crops, they are susceptible to infestations by pests such as corn rootworms, corn borers, and aphids. Sorghum may also be affected by sugarcane aphids.
- **Cotton:** Can be susceptible to infestations by pests like cotton bollworms and spider mites.
- **Soybeans:** Susceptible to infestations by pests such as soybean aphids, soybean cyst nematodes, and various caterpillar species.

The region’s farmers also lose a significant amount of crops each year as a result of wildlife foraging. This can be particularly problematic in areas where natural habitat has been diminished or in years where weather patterns such as early/late frost deep snow, or drought has caused the wild food sources to be limited.

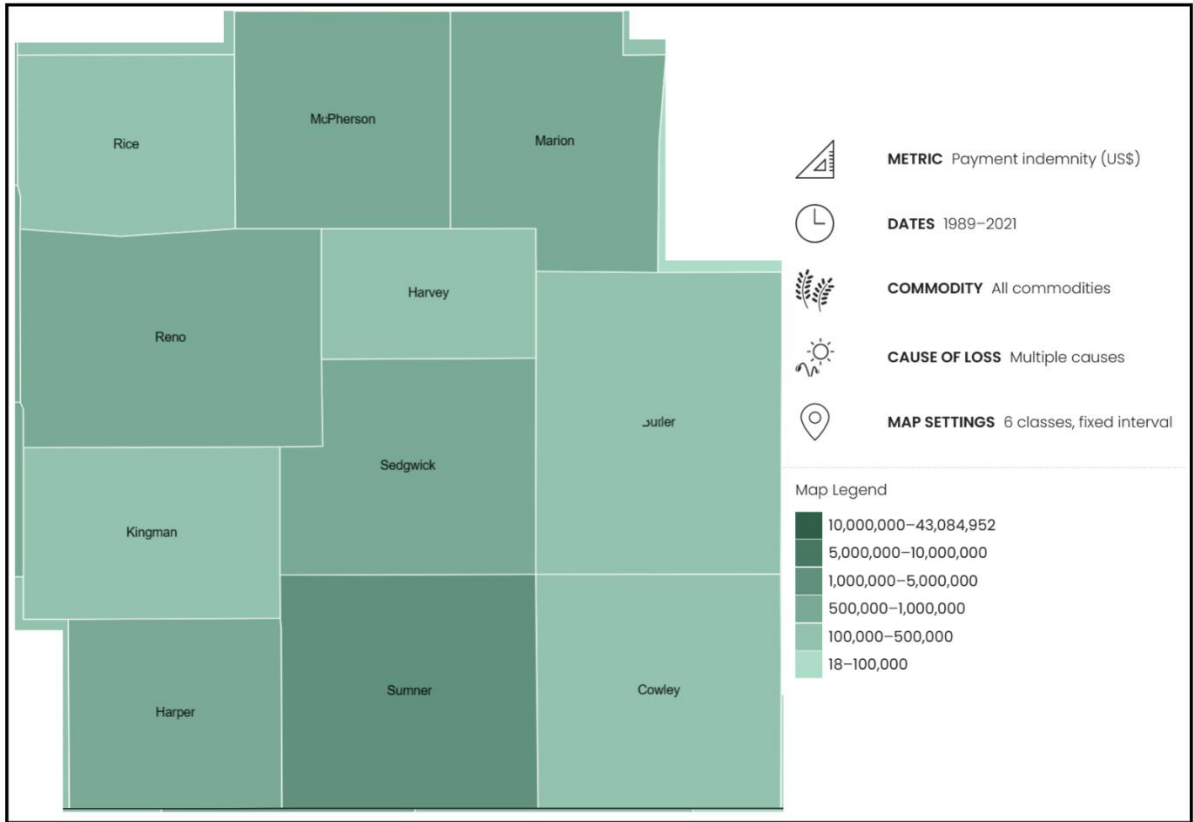

Trees within Kansas Region G are also susceptible to a variety pest and disease including:

- Emerald Ash Borer
- Pine Wilt
- Oak Wilt
- Dutch Elm Disease

**4.8.3 Previous Occurrences**

Infestation events can cause significant agricultural impacts. The following map from the United States Department of Agriculture details total agricultural losses, by county, due to infestation conditions from 1989 to 2021:

**Map X: Agricultural Losses Due to Infestation Events, 1989 to 2021**

Source: USDA

#### 4.8.4 Probability of Future Incidents

The probability of agricultural infestation in Kansas Region G can vary depending on a variety of factors. These factors include:

- **Crop Types:** The types of crops grown in Southeast Kansas play a significant role in determining the probability of infestation. Different crops are susceptible to different pests and diseases.
- **Climate:** Climate conditions, including temperature and humidity, can influence the prevalence of pests and diseases. Warmer and wetter conditions may be more conducive to certain infestations, while dry conditions may reduce the risk.
- **Geography:** Geographic features, such as proximity to bodies of water, forests, or neighboring agricultural regions, can affect the likelihood of infestations. Certain pests and diseases may be more prevalent in specific geographical areas.
- **Crop Management Practices:** The adoption of pest management practices, including crop rotation, the use of resistant crop varieties, and the application of pesticides, can impact the probability of infestation. Sustainable and integrated pest management practices can help mitigate infestation risks.
- **Seasonal Variability:** Infestation risks can vary from season to season. Some years may see higher infestation levels due to factors like weather patterns or the cyclical nature of pest populations.
- **Migration of Pests:** The movement of pests from other regions or neighboring states can introduce infestation risks. Monitoring and surveillance are essential to detect and respond to potential threats.
- **Disease Vectors:** The presence of disease vectors, such as certain insects or animals that can transmit diseases to crops or livestock, can increase the likelihood of infestations.
- **Biosecurity Measures:** Measures taken to prevent the introduction and spread of pests and diseases, such as quarantine procedures and biosecurity protocols, can help reduce the probability of infestation.

The Kansas Forest Service and Kansas Department of Agriculture have identified the following as emerging agricultural infestation threats:

- **Thousand Cankers Disease of Walnut:** Caused by a combination of a fungus (*Geosmithia morbida*) and the walnut twig beetle (*Pityophthorus juglandis*). The walnut twig beetles carry fungal spores, and when they tunnel through the outer bark into the tree the fungus is transmitted during gallery construction. The fungus kills an area under the bark and the areas of dead tissue are called cankers. When the walnut twig beetles are abundant, numerous cankers can form and coalesce to girdle twigs and branches, restricting movement of water and nutrients. Black walnut (*Juglans nigra*), the most valuable native species to the state, is the most susceptible of the *Juglans* species to this disease.
- **Asian Longhorned Beetle:** Feeds on a wide variety of hardwood tree species that are native or planted in Kansas. It kills trees by creating large tunnels as larvae causing branches or stems to break and eventually lead to tree death. Because this beetle is not native to North America, it has no known natural enemies, and Kansas trees have low resistance to this pest. It has not been detected in Kansas. It has been stated that if the beetle were to become established in the US, it could become one of the most destructive and costly pests ever to industry, urban neighborhoods, and natural forests.
- **Gypsy Moth:** Moth has been infested the northeast, resulting in massive defoliation of shade, fruit, and ornamental trees as well as hardwood forests. Caterpillars devour the leaves of many hardwood tree species and shrubs that can turn a usually lush summer scene into one of winter.
- **Asian Gypsy Moth:** A native species of Asia, first detected in Washington in 1991. Ongoing and completed eradication of various sites in the U.S. have so far prevented the establishment of this generalist feeder. This moth is much more destructive if it became established and spread east because of its broad host range and the females are active fliers due to their larger wingspan.

- **Sudden Oak Death:** In June 2019, the causal agent of Sudden Oak Death, *Phytophthora ramorum*, was detected in rhododendrons originating from Park Hill Plants nursery in Oklahoma, and plants from that nursery were shipped to 60 Walmart stores across Kansas and one Home Depot store in Pittsburg, Kansas. Sudden Oak Death is caused by *Phytophthora ramorum*, a water mold pathogen. The pathogen is also the cause of the Ramorum Leaf Blight, Ramorum Dieback and *Phytophthora* Canker Diseases. This pathogen is considered especially dangerous because it affects a wide variety of trees, shrubs and plants and there is no known cure.
- **Tomato Brown Rugose Fruit Virus:** Tomato Brown Rugose Fruit Virus is a newly discovered tobamovirus that has been found, but not yet established, in the United States. Its two main hosts are tomatoes and peppers, causing concern for growers of these plants. The virus is mechanically transmitted, meaning it can be transmitted from one plant to the next on contaminated tools and equipment, and workers handling many plants in a greenhouse.

It's important to note that agricultural infestations are a dynamic and complex issue, and the probability of infestation can vary from year to year. Farmers and agricultural professionals in Kansas Region G typically rely on agricultural extension services, research institutions, and government agencies to provide information, guidance, and resources for managing and mitigating infestation risks. Proactive pest monitoring and management practices are essential for minimizing the impact of infestations on crop yields and agricultural productivity in the region.

#### **4.8.5 Projected Changes in Hazard Location, Intensity, Frequency, and Duration**

Climate change can have several impacts on agricultural infestation in Kansas Region G, affecting the types and prevalence of pests and diseases that farmers face, and can include:

- **Increased Pest Populations:** Warmer temperatures and milder winters can promote the survival and reproduction of certain pests. In Kansas Region G, this may include insects like aphids, corn borers, and various types of beetles. Higher pest populations can lead to more frequent and severe infestations, potentially reducing crop yields.
- **Altered Pest Behavior:** Changes in temperature and climate patterns can influence the behavior and life cycles of pests. Some insects may emerge earlier in the season or have more generations per year, increasing the likelihood of damage to crops.
- **Extended Growing Seasons:** Longer growing seasons, a consequence of warming temperatures, can provide pests with additional time to feed on crops. This extension can lead to greater crop damage if effective pest management strategies are not in place.
- **Shifts in Pest Distribution:** Climate change can result in shifts in the geographic distribution of pests. Pests that were once uncommon in Kansas Region G may become more prevalent as temperatures become more suitable for their survival and reproduction.
- **Altered Disease Dynamics:** Climate change can influence the prevalence and distribution of plant diseases. Warmer and wetter conditions can create favorable environments for certain pathogens, such as fungi and bacteria, increasing the risk of disease outbreaks in crops.
- **Increased Risk of Invasive Species:** Changes in temperature and climate patterns can facilitate the introduction and establishment of invasive species. These species may outcompete native pests and diseases, posing new challenges for farmers.
- **Water Stress:** Climate change can result in more variable precipitation patterns, including more frequent droughts. Water-stressed crops may be more susceptible to pest infestations, as their natural defenses may be compromised.
- **Pesticide Resistance:** As pest populations adapt to changing conditions, they may develop resistance to pesticides more rapidly. This can reduce the effectiveness of chemical pest control methods.
- **Impact on Beneficial Organisms:** Climate change can also affect the populations and behaviors of beneficial organisms, such as natural predators and parasites of pests. Disruptions in these natural control mechanisms can exacerbate infestation problems.

#### 4.8.6 Vulnerability and Impact

As illustrated by the following table from the USDA 2017 Census of Agriculture, Kansas Region G has a large agricultural base susceptible to disease and pest infestation:

**Table X: Kansas Region G County Level Agricultural Data**

<b>Jurisdiction</b>	<b>Number of Farms</b>	<b>Farm Acreage</b>	<b>Market Value of Products Sold</b>
Butler County	1,471	798,408	\$180,941,000
Cowley County	921	563,453	\$96,515,000
Harper County	477	489,183	\$93,148,000

Sumner County	953	757,777	\$155,671,000

Source: USDA National Agricultural Statistics Service

Agricultural vulnerabilities can vary depending on the type of infestation, the crops or livestock affected, and instituted control measures, and include:

- **Crop and Livestock Losses:** One of the most immediate and significant vulnerabilities is the potential for crop and livestock losses. Pests, diseases, and invasive species can cause substantial damage to crops, resulting in reduced yields and economic losses.
- **Financial Losses:** Infestations can lead to increased production costs, including expenses for pest control measures, pesticides, and treatments. These added costs can strain the financial resources of farmers and agricultural businesses.
- **Food Insecurity:** Crop and livestock losses due to infestations can threaten food security by reducing the availability of food products.
- **Economic Instability:** Agricultural infestations can lead to economic instability in rural communities heavily dependent on farming. Reduced incomes for farmers can have cascading effects on local economies, impacting businesses and jobs in related industries.

Potential impacts on the agricultural community include:

- **Reduced Crop Yields:** One of the most direct impacts of infestation is a decrease in crop yields. Pests, diseases, and invasive species can damage or destroy plants, resulting in smaller harvests.
- **Crop Quality Reduction:** Infestations can also reduce the quality of crops by causing physical damage, deformities, or contamination. This can affect the marketability and value of agricultural products.
- **Livestock Health Issues:** Infestations can lead to health problems in livestock, including weight loss, reduced productivity, and increased susceptibility to diseases. Livestock infestations can also impact meat and dairy quality.
- **Trade Barriers:** Agricultural infestations can lead to trade restrictions and barriers. Countries may impose import bans or stringent regulations on products from regions affected by certain pests or diseases to prevent their spread.
- **Increased Chemical Use:** To combat infestations, farmers may resort to increased pesticide or chemical use. This can have adverse effects on the environment and human health, as well as contribute to pesticide resistance.

- **Disruption of Farming Practices:** Infestations can disrupt normal farming practices, leading to delays in planting or harvesting, increased labor requirements, and a need for specialized pest management.

Efforts to mitigate the vulnerabilities and impacts of infestations include integrated pest management strategies, research and monitoring, early detection systems, education and training for farmers, and sustainable farming practices. Addressing infestations requires a multi-faceted approach that considers economic, environmental, and food security factors.

In addition, an agricultural infestation can have significant impacts on the people in an impacted agricultural community, affecting their livelihoods, health, and well-being, and include:

- **Reduced Income:** For farmers and agricultural workers, the most immediate impact of infestations is often reduced income due to crop or livestock losses.
- **Increased Health Risks:** Infestations involving disease vectors can increase the risk of vector-borne diseases.
- **Migration:** In some cases, people may be forced to migrate in search of better economic opportunities due to infestation-related job losses.
- **Increased Healthcare Costs:** Infestations that result in human health issues can lead to increased healthcare costs for individuals and communities, putting additional financial strain on affected populations.
- **Psychological Stress:** Infestations can cause psychological stress and anxiety, particularly for farmers and agricultural workers who face uncertainty and financial pressures due to crop or livestock losses.

Agricultural infestations can have several environmental impacts, often interconnected with agricultural practices, and can include:

- **Pesticide Use:** To combat infestations, farmers may resort to increased pesticide use. The application of pesticides can result in chemical runoff into nearby water bodies, leading to water pollution. This pollution can harm aquatic ecosystems, affecting fish and other aquatic species.
- **Loss of Biodiversity:** Infestations can alter the composition of plant and animal species in agricultural areas. The introduction of invasive species or the suppression of native vegetation can lead to reduced biodiversity, impacting the health of ecosystems.
- **Soil Erosion:** In some cases, infestations can weaken or kill plants, leaving soil exposed to erosion by wind and water. Soil erosion can degrade soil quality, reduce agricultural productivity, and contribute to sedimentation in water bodies.
- **Habitat Changes:** Changes in land use and agricultural practices prompted by infestations can lead to alterations in habitat structure and availability. These changes can affect wildlife populations, including species that rely on specific habitats within agricultural landscapes.
- **Water Quality Impacts:** Infestations can indirectly affect water quality through their influence on land management. Runoff from infested areas, along with pesticide residues and sediment, can compromise water quality and lead to issues such as algal blooms and oxygen depletion in water bodies.
- **Impact on Pollinators:** Some agricultural pests and diseases can have detrimental effects on pollinators, including bees and butterflies. Reduced pollinator populations can harm the reproduction of flowering plants, including many agricultural crops.
- **Secondary Effects on Non-Target Species:** Pest control measures, such as the use of pesticides, may have unintended consequences by affecting non-target species, including beneficial insects, birds, and mammals.
- **Impact on Natural Pest Control:** Some infestations can disrupt natural pest control mechanisms by altering the populations and behaviors of beneficial organisms, such as predators and parasitoids. This can lead to increased reliance on chemical pest control.

**Consequence Analysis**

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Agricultural Infestation Consequence Analysis**

Subject	Potential Impacts
Health and Safety of the Public	Infestations involving disease vectors can increase the risk of vector-borne diseases.
Health and Safety of Responders	Impact would be minimal as no first response effort is anticipated.
Continuity of Operations	Kansas counties maintain continuity plans which can be enacted as necessary based on the situation. Agricultural infestation is not expected to require a plan activation.
Property, Facilities, and Infrastructure	Impact would be minimal.
Impact on Environment	Loss of biodiversity, habitat changes water quality degradation, loss of pollinators, and secondary effects on non-target species from increased pesticide usage.
Economic Conditions	Impacts to the economy will depend on the severity of the infestation. The potential for economic loss to the community could be if the infestation is hard to contain, eliminate, or reduce. Impact could be minimized from crop insurance payments.
Public Confidence in Governance	Confidence could be in question depending on timeliness and steps taken to warn the producers and public, and treat/eradicate the infestation.

**4.8.7 Jurisdictional Risk and Vulnerability**

In Kanas, agricultural infestation is considered a state concern due to the heavily agricultural nature of the economy. Data assessing agricultural infestation risk is often presented at the county or state level, and not by individual jurisdictions. As such, a local jurisdiction risk assessment could not be completed.

## 4.9 Dam or Levee Failure

### 4.9.1 Hazard Description

A dam is a barrier across flowing water that obstructs, directs, or slows down the flow, often creating a reservoir, lake, or impoundment. Most dams have a section called a spillway or weir, over or through, which water flows, either intermittently or continuously. Dams commonly come in two types, embankment (the most common) and concrete (gravity, buttress, and arch), as well as sizes. They also serve a number of purposes and provide essential benefits, including drinking water, irrigation, hydropower, flood control, and recreation.

Large or small, dams have a powerful presence that is frequently overlooked until a failure occurs. Dams fail in two ways, a controlled spillway release done to prevent full failure, or the partial or complete collapse of the dam itself. In each instance, an overwhelming amount of water, and potentially debris, is released. Dam failures are rare, but when they do occur, they can cause loss of life and immense damage to property, critical infrastructure, and the environment.

Possible reasons for dam failure include but are not limited to:

- Sub-standard construction materials/techniques
- Spillway design error
- Geological instability caused by changes to water levels during filling or poor surveying
- Sliding of a mountain into the reservoir
- Poor maintenance, especially of outlet pipes
- Human, computer, or design error
- Internal erosion, especially in earthen dams
- Earthquakes
- Terrorism

There are three classifications of dam failure, hydraulic, seepage, and structural. The following is an explanation of each these failure classifications:

- **Hydraulic:** This failure is a result of an uncontrolled flow of water over and around the dam structure as well as the erosive action on the dam and its foundation. The uncontrolled flow causing the failure is often classified as wave action, toe erosion, or gullying. Earthen dams are particularly susceptible to hydraulic failure because earthen materials erode more quickly than other materials, such as concrete and steel. This type of failure constitutes approximately 40% of all dam failures.
- **Seepage:** Seepage is the velocity of an amount of water controlled to prevent failure. This occurs when the seepage occurs through the structure to its foundation, where it begins to erode within. This type of failure accounts for approximately 4% of all dam failures.
- **Structural:** A failure that involves the rupture of the dam or the foundation by water movement, earthquake, or sabotage. When weak materials construct dams (large, earthen dams) are the primary cause of this failure. Structural failure occurs with approximately 30% of dam failures.

A levee is a man-made structure built to control or prevent the overflow of water from rivers, lakes, or other bodies of water. Levees are typically earthen embankments or walls constructed along the banks of water bodies to provide protection against flooding. They serve as barriers to keep water within its natural or artificial channels, protecting adjacent land areas from inundation. Levees typically have a sloping side that faces the water (riverside) and a steeper side facing away from the water (landside). They may also include features like berms, floodwalls, and floodgates to enhance their effectiveness in flood control. Levee failures can occur in various ways, and they are typically classified into different types based on the mechanism or cause of the failure, and include:

- **Overtopping:** Occurs when floodwaters rise above the crest or top of the levee. This can happen when the floodwater volume exceeds the levee's design capacity or when the levee has been poorly maintained or constructed. Overtopping can erode the levee's surface and eventually lead to breaches.
- **Erosion:** Occurs when the flowing water erodes the soil or materials comprising the levee. Erosion can result from the force of the water or from seepage of water through the levee's foundation, which can carry soil particles away and weaken the structure.
- **Seepage:** Occurs when water infiltrates the levee through the soil or the levee's foundation. Over time, seeping water can weaken the structural integrity of the levee. Piping, a type of seepage failure, is particularly concerning, as it involves the formation of tunnels or pipes within the levee through which water flows, further eroding the structure.
- **Slumping or Landslide:** Occurs when a portion of the levee's embankment or slope collapses. This can result from saturated soils, unstable materials, or rapid changes in water levels. Slumping or landslides can lead to breaches in the levee.
- **Breach:** A complete failure of the levee, resulting in a significant opening or hole through which floodwaters can freely flow into protected areas. Breaches can occur due to any combination of failure mechanisms, and they can be sudden and catastrophic.
- **Design or Construction Errors:** Levee failures can also occur due to inadequate height or width, poor materials, or improper compaction during construction. These errors may not become apparent until the levee is put to the test by a flood event.

#### 4.9.2 Location & Extent

The KDA Division of Water Resources (KDA-DWR) is responsible for the review and approval of plans for constructing new dams and for modifying existing dams, ensuring quality control during construction, and monitoring dams that, if they failed, could cause loss of life, or interrupt public utilities or services. The KDA-DWR regulates the construction, operation, and maintenance of all dams or other water obstructions, with the exception of federal reservoirs.

The Obstructions in Streams Act (K.S.A 82a-303b) requires owners of high hazard (class C) and significant hazard dams (class B) dams to have a qualified engineer conduct periodic dam inspections. For high hazard dams, the inspection must be done every three years. For significant hazard dams, an inspection must be done every five years. Dam Hazard Classifications are detailed in the following table:

**Table X: Dam Hazard Potential Classification**

Hazard Potential	Class	Definition	Inspection Timeline	Number of Regional Dams in Category
High	C	Failure or mis-operation will result in probable loss of life.	Three Years	44
Significant	B	Failure or mis-operation results in no probable loss of life but can cause major economic loss, disruption of lifeline facilities or impact the public's health, safety, or welfare.	Five Years	22

**Table X: Dam Hazard Potential Classification**

Hazard Potential	Class	Definition	Inspection Timeline	Number of Regional Dams in Category
Low	A	Failure or mis-operation results in no probable loss of human life and low economic losses.	Not inspected, downstream conditions are reassessed to determine if conditions have changed to necessitate reclassification	571

Source: KDA-DWR

Regulation of levees in the United States involves multiple entities at different levels of government: These entities include:

- **Local Levee Districts:** In many cases, local levee districts or authorities are responsible for the construction, maintenance, and operation of levees. These districts are often formed by communities or landowners in areas prone to flooding, and they assess taxes or fees to fund levee projects.
- **Local Governments:** Local governments, such as city or county governments, may also have roles in regulating and overseeing levees. They may work in coordination with state and federal agencies to ensure that levees comply with applicable regulations and standards.
- **State Agencies:** State agencies play a role in regulating and overseeing levees within their jurisdictions. They may establish standards, guidelines, and regulations for levee construction, maintenance, and inspection. State agencies may also provide technical assistance to local levee districts.
- **Federal Agencies:** The U.S. Army Corps of Engineers (USACE) is a major federal agency involved in levee regulation. The USACE is responsible for evaluating and accrediting levees through the National Levee Safety Program. FEMA also plays a role in floodplain management and mapping. Levees that are accredited by the USACE may influence floodplain mapping and impact flood insurance requirements for communities.

The regulation of levees involves a combination of engineering standards, safety evaluations, and adherence to local, state, and federal regulations. Levee safety is a critical aspect of flood risk management, and ongoing inspection, maintenance, and potential upgrades are essential to their effectiveness.

The following map, from the USACE National Levee Database, details the location of major levee systems in Kansas Region G:

Source: National Levee Database

As a subset of data, the following table details known information concerning levees within Kansas Region G identified as providing protection to a populations or structures:

**Table X: Kansas Region G Levee Systems Protecting People and/or Properties**

<b>County</b>	<b>Jurisdiction(s)</b>	<b>Name</b>	<b>Waterway</b>	<b>Levee Miles</b>	<b>Leveed Area in Square Miles</b>

County	Jurisdiction	Dam Name	Incident Type	Uncontrolled Release of Reservoir	Year	Deaths
Kingman	Rago	Yeager Lake Dam	Seepage	No	2002	0

Source: National Performance of Dams Program

There have been no notable or reported levee failures in Kansas Region G in the past 10 years.

#### 4.9.4 Probability of Future Incidents

Despite the infrequent historical occurrences of dam failure resulting in an uncontrolled release of the reservoir, there remains a significant concern due to the large number of significant and high hazard dams throughout the region. The probability of dam failure events is not easily measured, but may align with:

- The probability of future flood events
- Preventative measure taken by dam owners and operators, maintenance and repair
- Frequent condition inspections
- Proper operating procedures

KDA-DWR conducts routine monitoring and inspection of dams within the state on the previously identified schedule, with priority placed on those dams which pose the greatest potential threat. However, to fully determine the probability of a future event, a full engineering inspection would need to be completed on each dam, something beyond the scope of this plan.

Dams undergoing repair and/or reconstruction are required to be designed to pass at least the 1%-annual-chance rainfall event with one foot of freeboard. The most critical and hazardous dams are required to meet a spillway design standard much higher than passing the runoff from a 1%-annual-chance rainfall event. Although not all the dams have been shown to withstand the 1%-annual-chance rainfall event, most of the dams meet this standard due to original design requirements or recent spillway upgrades.

#### 4.9.5 Projected Changes in Hazard Location, Intensity, Frequency, and Duration

The 2018 National Climate Assessment report indicates that much of the water infrastructure in the central portion of the United States, including dams, is nearing the end of its planned life expectancy. As indicated in the report: “Aging and deteriorating dams and levees also represent an increasing hazard when exposed to extreme or, in some cases, even moderate rainfall. Several recent heavy rainfall events have led to dam, levee, or critical infrastructure failures, including the Oroville emergency spillway in California in 2017, Missouri River levees in 2017, 50 dams in South Carolina in October 2015 and 25 more dams in the state in October 2016, and New Orleans levees in 2005 and 2015. The national exposure to this risk has not yet been fully assessed.”

A potential outcome of changing climate in Kansas Region G is an increase in extreme precipitation events which may lead to more severe floods and a greater risk of dam failure. Additional projected greater periods of drought conditions and high heat may result in ground cracking, a reduction of soil strength, erosion, and subsidence in earthen dams.

The NOAA NCEI State Climate Summary 2022 for Kansas suggests that the number of extreme precipitation events are projected to increase. These extreme events will likely place increased stress on dams within the State.

**Chart X: Kansas Region G Number of Extreme Precipitation Events (Greater Than 2 Inches)**

Source: NOAA NCEI State Climate Summary 2022 for Kansas

At present there is no comprehensive assessment of the climate-related vulnerability and risks to existing dams. Additionally, there are no common design standards concerning the repair or modification of existing dams nor for the designed and construction of new dams operated in the face of changing climate risk.

Land use trends can significantly impact a community's vulnerability to dam or levee failure. The way land is developed and used in proximity to dams and levees can influence the potential consequences of failure, affecting the safety of residents and infrastructure.

Development in flood-prone areas or behind levees without adequate consideration for flood risk increases vulnerability. Increased urbanization and population density near dams and levees can intensify the consequences of failure. Higher population density means more people and assets are at risk, leading to greater potential for loss of life and property damage.

The location of critical infrastructure, such as hospitals, schools, and emergency services, in close proximity to dams or levees can heighten vulnerability. Infrastructure assets may be at risk of damage or disruption, impacting the community's ability to respond effectively to a failure.

Agricultural Land Use:

#### **4.9.6 Vulnerability and Impact**

The National Inventory of Dams documents all known dams in Kansas. The U.S. Army Corps of Engineers (USACE) is responsible for maintaining the National Inventory of Dams and works in close collaboration with federal and State of Kansas dam regulating agencies to obtain accurate and complete information about dams in the database. The database contains information about a dam's location and condition assessment. The condition assessment describes the condition of the dam based on available information, with the following ratings given:

- **Satisfactory:** No existing or potential dam safety deficiencies are recognized. Acceptable performance is expected under all loading conditions (static, hydrologic, seismic) in accordance with the minimum applicable state or federal regulatory criteria or tolerable risk guidelines.

- **Fair:** No existing dam safety deficiencies are recognized for normal operating conditions. Rare or extreme hydrologic and/or seismic events may result in a dam safety deficiency. Risk may be in the range to take further action.
- **Poor:** A dam safety deficiency is recognized for normal operating conditions which may realistically occur. Remedial action is necessary. Poor may also be used when uncertainties exist as to critical analysis parameters which identify a potential dam safety deficiency. Investigations and studies are necessary.
- **Unsatisfactory:** A dam safety deficiency is recognized that requires immediate or emergency remedial action for problem resolution.
- **Not Rated:** The dam has not been inspected, is not under state or federal jurisdiction, or has been inspected but, for whatever reason, has not been rated.
- **Not Available:** Dams for which the condition assessment is restricted to approved government users.

The following table details the nearest jurisdiction, dam number, dam names, Emergency Action Plan (EAP) status, and condition assessment of all high hazard dams in Region G.

**Table X: Kanas Region G High Hazard Dams**

Source: National Inventory of Dams

Following the metric established in the State of Kansas Hazard Mitigation Plan, an analysis of vulnerability to dam failure was completed by points being assigned to each type of dam and then aggregated for a total point score for each county. This analysis does not intend to demonstrate vulnerability in terms dam structures that are likely to fail, but rather provides a general overview of the counties that have a high number of dams, with weighted consideration given to dams whose failure would result in greater damages. Points were assigned as follows:

- Low Hazard Dams: 1 point
- Significant Hazard Dams: 2 points
- High Hazard Dams: 3 points
- High Hazard Dams without an EAP: 2 points
- Federal Reservoir Dams: 3 points.

Based on these categories, an awarded point total was determined for each participating county and a vulnerability rating assigned based on the following schedule.

**Table X: Dam Vulnerability Rating Schedule**

	Low	Medium-Low	Medium	Medium-High	High
Awarded Point Range	0 – 26	27 – 50	51 – 100	101 – 200	201 - 327

The following table presents the dam failure vulnerability rating for each Kansas Region G participating county.

**Table 4.14: Kansas Region G County Vulnerability Assessment for Dam Failure**

County	Low Hazard Dams	Significant Hazard Dams	High Hazard Dams	High Hazard Dams Without EAP	Federal Reservoirs	Vulnerability Rating	Vulnerability Level
Butler	217	10	13	0	1	276	High
Cowley	118	7	6	1	0	149	Medium-High
Harper	22	0	0	0	0	22	Low
Harvey	22	2	8	1	0	49	Medium-Low
Kingman	29	0	1	0	0	32	Medium-Low
McPherson	26	1	1	0	0	31	Medium-Low
Marion	25	0	3	0	1	34	Medium-Low
Reno	18	0	1	0	0	21	Low
Rice	17	0	0	0	0	17	Low
Sedgwick	68	1	10	2	1	98	Medium
Sumner	9	1	1	0	0	14	Low

Source: Analysis by KDEM utilizing data from: Kansas Department of Agriculture, Division of Water Resources, Water Structures program; U.S. Army Corps of Engineers; Bureau of Reclamation; U.S. Army, U.S. Fish and Wildlife.

For the NFIP, FEMA will only recognize a levee system in its flood risk mapping effort that meet minimum design, operation, and maintenance standards as established by 44 CFR 65.10 – Mapping of Areas Protected by Levee Systems. In general, evaluated levees are assigned to one of these categories:

- Accredited Levee: Area behind the levee is mapped as a moderate risk, with no mandatory flood insurance requirement.
- To Be Accredited: A levee system that has been approved for accreditation.
- Provisionally Accredited Levee (PAL): Area behind the levee is mapped as a moderate risk, with no mandatory flood insurance requirement, for a two-year grace period while compliance with 44 CFR 65.10 is sought
- Non-Accredited Levee: Area behind the levee is mapped according to FEMA protocols, likely resulting in a high-risk area designation and associated flood insurance requirements
- To Be Non-Accredited: A levee system that no longer meets the requirements stipulated in 44 CFR 65.10 and is scheduled to lose accredited status

Additionally, each levee is assigned a risk classification to aid in hazard analysis. The following table details these classifications and suggested actions to be taken:

**Table X: Levee Risk Classification Rating Definitions**

Class	Risk Characteristics	Suggested Actions
Very High	Likelihood of inundation due to breach and/or system component malfunction in combination with loss of life, economic, or environmental consequences results in very high risk.	Based on risk drivers, take immediate action to implement interim risk reduction measures. Increase frequency of levee monitoring, communicate risk characteristics to the community within an expedited timeframe; verify emergency plans and flood inundation maps are current; ensure community is aware of flood warning systems and evacuation procedures; and recommend purchase of flood insurance. Support risk reduction actions as very high priority.
High	Likelihood of inundation due to breach and/or system component malfunction in combination with loss of life, economic, or environmental consequences results in high risk.	Based on risk drivers, implement interim risk reduction measures. Increase frequency of levee monitoring; communicate risk characteristics to the community within an expedited timeframe; verify emergency plans and flood inundation maps are current; ensure community is aware of flood warning and evacuation procedures; and recommend purchase of flood insurance. Support risk reduction actions as high priority.

**Table X: Levee Risk Classification Rating Definitions**

Class	Risk Characteristics	Suggested Actions
Moderate	Likelihood of inundation due to breach and/or system component malfunction in combination with loss of life, economic, or environmental consequences results in moderate risk.	Based on risk drivers, implement interim risk reduction measures as appropriate. Verify risk information is current and implement routine monitoring program; assure operations and maintenance is up to date; communicate risk characteristics to the community in a timely manner; verify emergency plans and flood inundation maps are current; ensure community is aware of flood warning and evacuation procedures; and recommend purchase of flood insurance. Support risk reduction actions as a priority.
Low	Likelihood of inundation due to breach and/or system component malfunction in combination with loss of life, economic, or environmental consequences results in low risk.	Verify risk information is current and implement routine monitoring program and interim risk reduction measures if appropriate; assure operations and maintenance is up to date; communicate risk characteristics to the community as appropriate; verify emergency plans and flood inundation maps are current; ensure community is aware of flood warning and evacuation procedures; and recommend purchase of flood insurance. Support risk reduction actions to further reduce risk to as low as practicable.
Very Low	Likelihood of inundation due to breach and/or system component malfunction in combination with loss of life, economic, or environmental consequences results in very low risk.	Continue to implement routine levee monitoring program, including operation and maintenance, inspections, and monitoring of risk. Communicate risk characteristics to the community as appropriate; verify emergency plans and flood inundation maps are current; ensure community is aware of flood warning and evacuation procedures; and recommend purchase of flood insurance.
No Verdict	-	Not enough information is available to assign Risk.

Source: USACE

The following table details, by county and jurisdiction, information from the USACE concerning levee failure risk:

**Table X: Kansas Region G Levee Failure Consequence Analysis**

County	Jurisdiction	Name	People at Risk	Structures at Risk	Property Value	Levee Risk Classification	Levee System Status
Butler	Augusta	Augusta Levee	1,364	745	\$154,000,000	Low	Accredited
	El Dorado	El Dorado Levee	12	10	\$22,100,000	Not Screened	Non-Accredited
	Augusta	Walnut River Levee S. 1	0	5	\$42,900,000	Not Screened	Non-Accredited

Sumner	197	118	\$36,226,000

Source: USACE

A dam or levee failure event can have devastating and wide-ranging impacts on both people and communities. The severity of these impacts depends on the volume of water released and the location of the dam in relation to communities, and may include:

- **Loss of Life:** The sudden release of a large volume of water can result in flooding downstream, leading to drowning and casualties. The loss of life can be particularly high if the dam failure occurs in highly populated areas or when people are unable to evacuate in time.
- **Long Term Displacement:** People living downstream may be forced to evacuate their homes leading to displacement and requiring long-term shelter assistance.
- **Economic Consequences:** Both property damage and the disruption of transportation and utilities could affect local economies.
- **Psychological Trauma:** Survivors of dam failure events may experience psychological trauma, including post-traumatic stress disorder, anxiety, and depression. Witnessing the loss of lives and property can have long-lasting emotional effects on individuals and communities.

The impact of a dam or levee failure event on facilities, including critical facilities, can be wide-ranging. The extent of the impact depends on the proximity of the facilities to the dam and the volume of water released, and may include:

- **Structural Damage:** Facilities located downstream could sustain severe structural damage. Floodwaters can inundate buildings, causing structural failures, collapsing walls, and damaging foundations. This can render facilities inoperable or unsafe for use.
- **Equipment Damage:** Critical facilities often house valuable and sensitive equipment that can be severely damaged or destroyed by floodwaters and debris carried by the flood. This can include electrical systems, machinery, data centers, and communication equipment.
- **Disruption of Operations:** The flooding caused by a dam failure can disrupt the normal operations of critical facilities, including hospitals, emergency response centers, power plants, and water treatment plants. This disruption can have cascading effects on public services and infrastructure.
- **Long-Term Recovery:** The recovery process could be lengthy and resource intensive. It may involve rebuilding damaged infrastructure, restoring functionality, and implementing measures to prevent future vulnerabilities.

The environmental impact of dam or levee failures depends on the circumstances of the failure. After a failure occurs, the resulting flooding and moving debris can affect wildlife and natural habitats. The spread of pollution and hazardous materials can have negative impacts on the environment. Ecosystems and natural habitats may be destroyed, causing the migration or death of local wildlife. Depending on the timing and location of the failure, it can result in rapid changes in water temperature downstream. This can be harmful to temperature-sensitive aquatic species and ecosystems. Dam failures can disrupt natural ecological processes, such as nutrient cycling, sediment transport, and flow regimes. These disruptions can have cascading effects on ecosystems.

Any jurisdictional facility within an identified inundation zone of a dam or levee failure will be immediately impacted, potentially causing a cessation of all operations. The extent of the impact depends on multiple factors concerning the extent of the failure, and may include:

- **Emergency Response and Management:** Jurisdictional response agencies may be called upon to respond to a failure event. They must coordinate rescue operations, evacuations, and disaster response efforts to mitigate the immediate risks to human life and property.
- **Infrastructure Damage and Maintenance:** Jurisdictional public works agencies may need to assess and repair damage to roads, bridges, and other critical infrastructure affected by floodwaters and debris resulting from the dam failure. This can strain resources and disrupt transportation networks.
- **Public Health and Safety:** Jurisdictional public health agencies would provide support for public health needs during and after a dam failure, including responding to injuries, managing emergency shelters, and addressing potential health risks from contaminants or waterborne diseases.
- **Financial Impact:** A dam failure event can strain state budgets due to the costs associated with emergency response, infrastructure repair, environmental cleanup, and long-term recovery efforts. Local governments may need to allocate additional funds to address these needs.

### Consequence Analysis

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Dam or Levee Failure Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	Heavy flooding can cause power loss, property damage, injury, and death, and the displacement of populations. Standing water can also pose a public health risk due to the reproduction of disease vectors such as mosquitos.

**Table x: Dam or Levee Failure Consequence Analysis**

<b>Subject</b>	<b>Potential Impacts</b>
Impact on Responders	Heavy flooding may cause inaccessibility of roadways for first responders as well as damage of materials and resources. First responders will also have to facilitate evacuation measures to move people from the flooded area.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. Flooding caused by dam failure may create power outages, debris damage, and road closures.
Delivery of Services	Delivery of services may be disrupted due to flood-damaged bridges and roadways. Transit systems may face closures due to public safety concerns. The ability to deliver food, drinking water, and services will be heavily disrupted. Flooding may also interrupt communications and transportation due to power failure and accessibility challenges.
Property, Facilities, and Infrastructure	Flooding from failures impact roads and bridges, businesses, hospitals, and other critical entities. Water and sewer systems may also be damaged. Homes and businesses may be completely destroyed if situated close to the failure point.
Impact on Environment	Flooding and moving debris can affect natural areas and wildlife, spreading pollution and hazardous materials. Ecosystems and natural habitats may be completely destroyed, causing migration or death of wildlife.
Economic Conditions	There is a fiscal impact on the government after a failure due to disruption of travel and commerce routes and employee's ability to travel to work. Recourses at all levels are utilized impacting the ability to access resources long-term.
Public Confidence in Governance	Direct, immediate, and effective actions must be taken in order to maintain public confidence. Response activities must include all levels of government.

#### 4.9.7 Jurisdictional Risk and Vulnerability

To help understand the risk and vulnerability to dam and levee failure events of participating jurisdictions the following tables were developed using available data:

**Tabel X: Jurisdictional High Hazard Dam Totals**

<b>County</b>	<b>Jurisdiction</b>	<b>Number High Hazard Dams</b>	<b>Number High Hazard Dams Without EAP</b>	<b>Lowest Rated Condition Assessment</b>
Butler	Andover	1	0	Poor
	Augusta	3	0	Poor
	Douglass	1	0	Not Rated
	El Dorado	4	0	Fair
	Latham	1	0	Fair
	Leon	1	0	Fair
	Sycamore Township	1	0	Satisfactory
Cowley	Atlanta	1	0	Not Rated
	Floral	1	0	Satisfactory
	Parkerfield	1	0	Fair
	Udall	1	1	Satisfactory
	Wilmot	1	0	Fair
	Winfield	1	0	Satisfactory
Harvey	Newton	3	0	Fair
	North Newton	1	1	Fair
	Sedgwick	1	1	Satisfactory
	Whitewater	3	0	Fair
Kingman	Rago	1	0	Fair

**Tabel X: Jurisdictional High Hazard Dam Totals**

County	Jurisdiction	Number High Hazard Dams	Number High Hazard Dams Without EAP	Lowest Rated Condition Assessment
McPherson	McPherson	2	0	Not Rated
	Hilton	1	0	Not Rated
Reno	Hutchinson	1	1	Not Rated
Sedgwick	Andale	1	0	Fair
	Colwich	1	0	Satisfactory
	Derby	1	1	Not Rated
	Forest Hills	1	1	Fair
	Furley	1	0	Not Rated
	Garden Plain	2	0	Satisfactory
	Linwood Acres	1	0	Fair
	Tolerville	1	1	Not Rated
Sumner	Wellington	1	0	Satisfactory

Source: National Inventory of Dams

Data concerning the number of people, number of structures, infrastructure, and valuation in identified high hazard dams' inundation areas was not available from either KDA-DWR or KDEM. A process is currently underway to compile this data and is expected to be available with the completion of the 2028 State of Kansas Hazard Mitigation Plan.

Additionally, there are three federally operated high hazard dams within Kansas Region G. The following table details known information concerning the condition and risk assessment for all federally operated dams:

**Table X: Jurisdictional Federally Operated Dam Risk Assessments**

County	Jurisdiction	Risk Assessment	Maximum People at Risk	Maximum Buildings at Risk
Butler	El Dorado	Low	15,512	8,408
Marion	Marion	Low	3,494	0
Sedgwick	Cheney	Not Available	Not Available	Not Available

Source: National Inventory of Dams

The following table details information from the USACE concerning levee failure consequence analysis for jurisdictions within Kansas Region G:

**Table X: Kansas Region G Levee Failure Consequence Analysis**

County	Jurisdiction	People at Risk	Structures at Risk	Property Value
Butler	Augusta	1,364	750	\$196,900,000
	El Dorado	12	10	\$22,100,000
Cowley	Arkansas City	3,825	2,118	\$335,000,000
	Winfield	4,484	2,354	\$1,190,000,000

## 4.10 Drought

### 4.10.1 Hazard Description

Drought is defined as an abnormally dry period lasting months or years when an area has a deficiency of water and precipitation in its surface and or underground water supply. It is, however, a normal, seasonal, and recurrent feature of climate that occurs in virtually all climate zones—typically in late spring through early fall. The duration of drought varies widely. There are cases when drought develops relatively quickly and lasts a very short period of time, exacerbated by extreme heat and/or wind, and there are other cases when drought spans multiple years, or even decades. The hydrological imbalance can be grouped into the following non-exclusive categories:

- Agricultural: When the amount of moisture in the soil no longer meets the needs of previously grown crops
- Hydrological: When surface and subsurface water levels are significantly below their normal levels
- Meteorological: When there is a significant departure from the normal levels of precipitation
- Socio-Economic: When the water deficiency begins to significantly affect the population

When below average, little or no rain falls, soil can dry out, and plants can die. If unusually dry weather persists and water supply problems develop the period is defined as a drought. Human activity such as over-farming, excessive irrigation, deforestation, and poor erosion controls can exacerbate a drought's effects. It can take weeks or months before the effects of below average precipitation on bodies of water are observed. Depending upon the region, droughts can happen more quickly, and be noticed sooner, or have their effects naturally mitigated. The more humid and wet an area is, the faster the effects will be realized. A naturally dry region, which typically relies more on subsurface water will take more time to actualize its effects.

Periods of drought can have significant environmental, agricultural, health, economic, and social consequences. The effects vary depending upon vulnerability and regional characteristics. Droughts can also reduce water quality through a decreased ability for natural rivers and streams to dilute pollutants and increase contamination. The most common effects are diminished crop yield, increased erosion, dust storms, ecosystem damage, reduced electricity production due to reduced flow through hydroelectric dams, shortage of water for industrial production, and increased risk of wildland fires.

### 4.10.2 Location and Extent

All of Kansas Region G is susceptible to drought conditions. However, the specific susceptibility to drought depends on various factors, including climate patterns, land use practices, and water management strategies.

Kansas Region G generally has a semi-arid climate, characterized by relatively lower annual precipitation. This climatic condition makes the region more susceptible to drought, especially during periods of below-average rainfall. The demand for water for agricultural irrigation can also stress water resources in the region.

Kansas Region G is part of the Ogallala Aquifer region, a critical groundwater source. Excessive groundwater pumping during drought conditions can lead to aquifer depletion, posing long-term challenges for water availability. Kansas Region G also relies on reservoirs and rivers for water supply, and prolonged drought can lead to reduced water levels and increased competition for available water resources.

Droughts are regularly monitored by multiple federal agencies using a number of different indices. One of the best indicators of historic drought periods is provided by the U.S. Drought Monitor. The U.S. Drought Monitor provides a summary of drought conditions across the United States, including all Kansas counties. Often described as a blend of art and science, the map is updated weekly by combining a variety of data-based drought indices and indicators, along

with local expert input, into a single composite drought indicator. The following table details the U.S. Drought Monitor categories:

**Table X: U.S. Drought Monitor Categories**

Rating	Described Condition
None	No drought conditions
D0	Abnormally Dry
D1	Moderate Drought
D2	Severe Drought
D3	Extreme Drought
D4	Exceptional Drought

Source: U.S. Drought Monitor

Precipitation data is collected by the NWS throughout the State of Kansas. Additional rainfall data is also collected by the NWS through citizen weather rainfall sites. The following chart indicates annual precipitation averages for Kansas from 1895 to 2020:

**Chart X: Kansas Region G Observed Annual Precipitation**

Source: NOAA NCEI State Climate Summary 2022 for Kansas

Current drought conditions, which change weekly based, may be found on the U.S. Drought Monitor website.

### 4.10.3 Previous Occurrences

Drought is a normal climate pattern that has occurred in varying degrees of length, severity, and size. The following chart, from the U.S. Drought Monitor shows past drought conditions for Kansas Region G:

**Chart X: Past Drought Conditions for Kansas Region G**

Source: U.S. Drought Monitor

Note: Represents averaged conditions

Comprehensive data on droughts, drought impacts, and drought forecasting is extremely limited and often inaccurate. Due to the complexity of drought monitoring and the large areas droughts impact, agencies have difficulty quantifying and standardizing drought data.

Historical data was gathered from the U.S. Drought Monitor weekly reports for 2009 and 2022. This data was compiled and aggregated to provide a yearly estimate of the percentage of Kansas Region G in each Drought Monitor category.

**Table X: Percentage Area in U.S. Drought Monitor Category**

Year	None	D0-D4	D1-D4	D2-D4	D3-D4	D4
2022	31.0%	69.0%	47.1%	32.9%	12.4%	0.5%
2021	84.6%	13.4%	0.0%	0.0%	0.0%	0.0%
2020	53.3%	46.7%	27.9%	0.0%	0.0%	0.0%
2019	78.9%	21.1%	10.7%	3.5%	0.0%	0.0%
2018	22.4%	77.6%	76.1%	57.9%	30.1%	0.0%
2017	56.3%	43.7%	6.8%	0.0%	0.0%	0.0%
2016	85.0%	15.0%	7.0%	0.0%	0.0%	0.0%
2015	46.8%	53.2%	32.5%	0.0%	0.0%	0.0%

Source: U.S. Drought Monitor

The Secretary of Agriculture is authorized to designate counties as disaster areas to make emergency loans available to producers suffering losses in those counties and in counties that are contiguous to a designated county. USDA Secretarial disaster designations must be requested of the Secretary of Agriculture by a governor or the governor's authorized representative, and there is an expedited process for drought. The following table represents the total number of Secretarial Disaster Declarations, by county, for the Kansas Region G:

**Table X: Secretarial Drought Disaster Declarations, 2019 -2023**

County	2022	2021	2020	2019
Butler	5	0	0	0
Cowley	4	1	0	0
Harper	3	0	0	0

**Table X: Secretarial Drought Disaster Declarations, 2019 -2023**

County	2022	2021	2020	2019
Harvey	5	0	0	0
Kingman	3	0	0	0
Marion	4	0	0	0
McPherson	4	0	0	0
Reno	4	0	0	0
Rice	2	0	0	0
Sedgwick	4	0	0	0
Sumner	4	0	0	0

#### 4.10.4 Probability of Future Events

Historically, drought has affected Kansas Region G on a reoccurring basis. In reviewing historical data from the U.S. Drought Monitor weekly reports for Kansas Region G from 2009 through 2022 a weekly average can be created indicating the percentage time in each Drought Monitor category. This average can be used to extrapolate the potential likelihood of future drought conditions.

**Table X: Estimated Weekly Probability of Kansas Region G Being in U.S. Drought Monitor Category**

None	D0-D4	D1-D4	D2-D4	D3-D4	D4
50.21%	49.51%	33.97%	17.80%	8.94%	0.86%

Data: U.S. Drought Monitor

Kansas Region G can experience rapid droughts, with a sudden onset of intense dry periods following a period of normal precipitation. While these conditions may last only a few months, they can result in agricultural losses, water supplies shortages, and low stream and river volume.

While predicting drought provides many challenges, NOAA’s National Integrated Drought Information System provides the Northeast Drought Early Warning System to improve drought early warning capacity. The system is a network of regional and national partners that share information and coordinate actions to help communities in the region cope with drought. Developing and implementing the system allows Kansas to quickly respond to emerging drought conditions Through developing regional systems, the National Integrated Drought Information System is building the foundation for a nationwide system to improve drought forecasting.

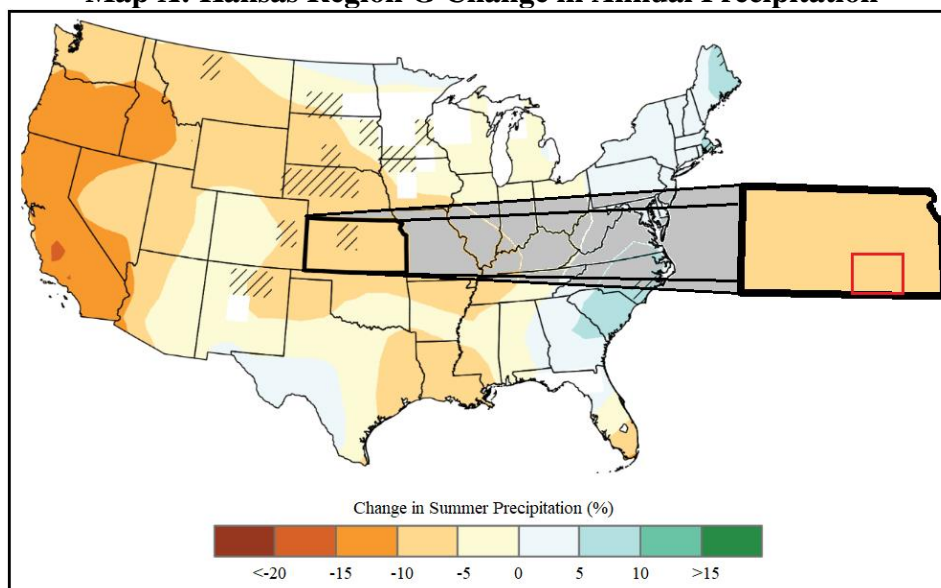

#### 4.10.5 Projected Changes in Hazard Location, Intensity, Frequency, and Duration

According to the National Institutes of Health National Center for Biotechnology Information publication Global Drought Trends and Future Projections “Drought is one of the most difficult natural hazards to quantify and is divided into categories (meteorological, agricultural, ecological and hydrological), which makes assessing recent changes and future scenarios extremely difficult.” However, using long term data estimates of future drought conditions can be determined through a combination of climate modeling, historical data analysis, and scientific assessments. This modelling takes into account factors such as temperature, precipitation, soil moisture, and other relevant variables.

Current modelling from the NOAA State Climate Summary 2022 for Kansas suggests that projections of overall annual precipitation are uncertain, summer precipitation is projected to decrease across the state, while winter precipitation is projected to increase. Winter precipitation increases could benefit winter wheat production, but summer drying would have negative impacts on rain-fed summer crops and rangeland. Although increased precipitation is projected, naturally occurring droughts are projected to be more intense because higher temperatures will increase evaporation rates.

The following map indicates the expected annual increase in precipitation for Kansas Region G:

**Map X: Kansas Region G Change in Annual Precipitation**

Source: NOAA NCEI State Climate Summary 2022 for Kansas

The NOAA NCEI State Climate Summary 2022 for Kansas indicates that the intensity of future droughts is projected to increase. Although projections of overall precipitation are uncertain, higher temperatures will increase the rate of soil moisture loss during dry spells, leading to more serious conditions during future naturally occurring droughts, including an increase in the occurrence and severity of wildfires.

#### **4.10.6 Vulnerability and Impact**

Droughts are rarely a direct cause of death, though the associated heat, dust, and stress can all contribute to increased mortality. However, drought can severely challenge a public water supplier through depletion of the raw water supply and greatly increased customer water demand. Even if the raw water supply remains adequate, problems due to limited treatment capacity or limited distribution system capacity may be encountered. Water supply planning is the key to minimizing the effects of drought on the population. Public water suppliers should continue to work to identify vulnerabilities and develop infrastructure, conservation plans, and partnerships to reduce the likelihood of running out of water during a drought.

In general, critical facilities and infrastructure are not directly vulnerable to losses as a result of drought. However, there is a potential that operations could be impacted by power failures caused by either increased utility demand or damaged power delivery infrastructure. In addition, drinking water infrastructure may be specifically vulnerable to the impacts of drought. Any decrease in groundwater supplies would stress this infrastructure and may cause shortages or rationing.

Drought conditions can cause significant agricultural impacts. In addition to obvious losses in yields in both crop and livestock production, drought is associated with increases in insect infestations, plant disease, and wind erosion. Droughts also bring increased problems with insects and disease to forests and reduce growth. The incidence of wildfires increases substantially during extended droughts, which in turn places both human and wildlife populations at higher levels of risk. The following map from the United States Department of Agriculture details total agricultural losses, by county, due to drought conditions from 1989 to 2021:

**Map X: Agricultural Losses Due to Drought Conditions, 1989 to 2021**

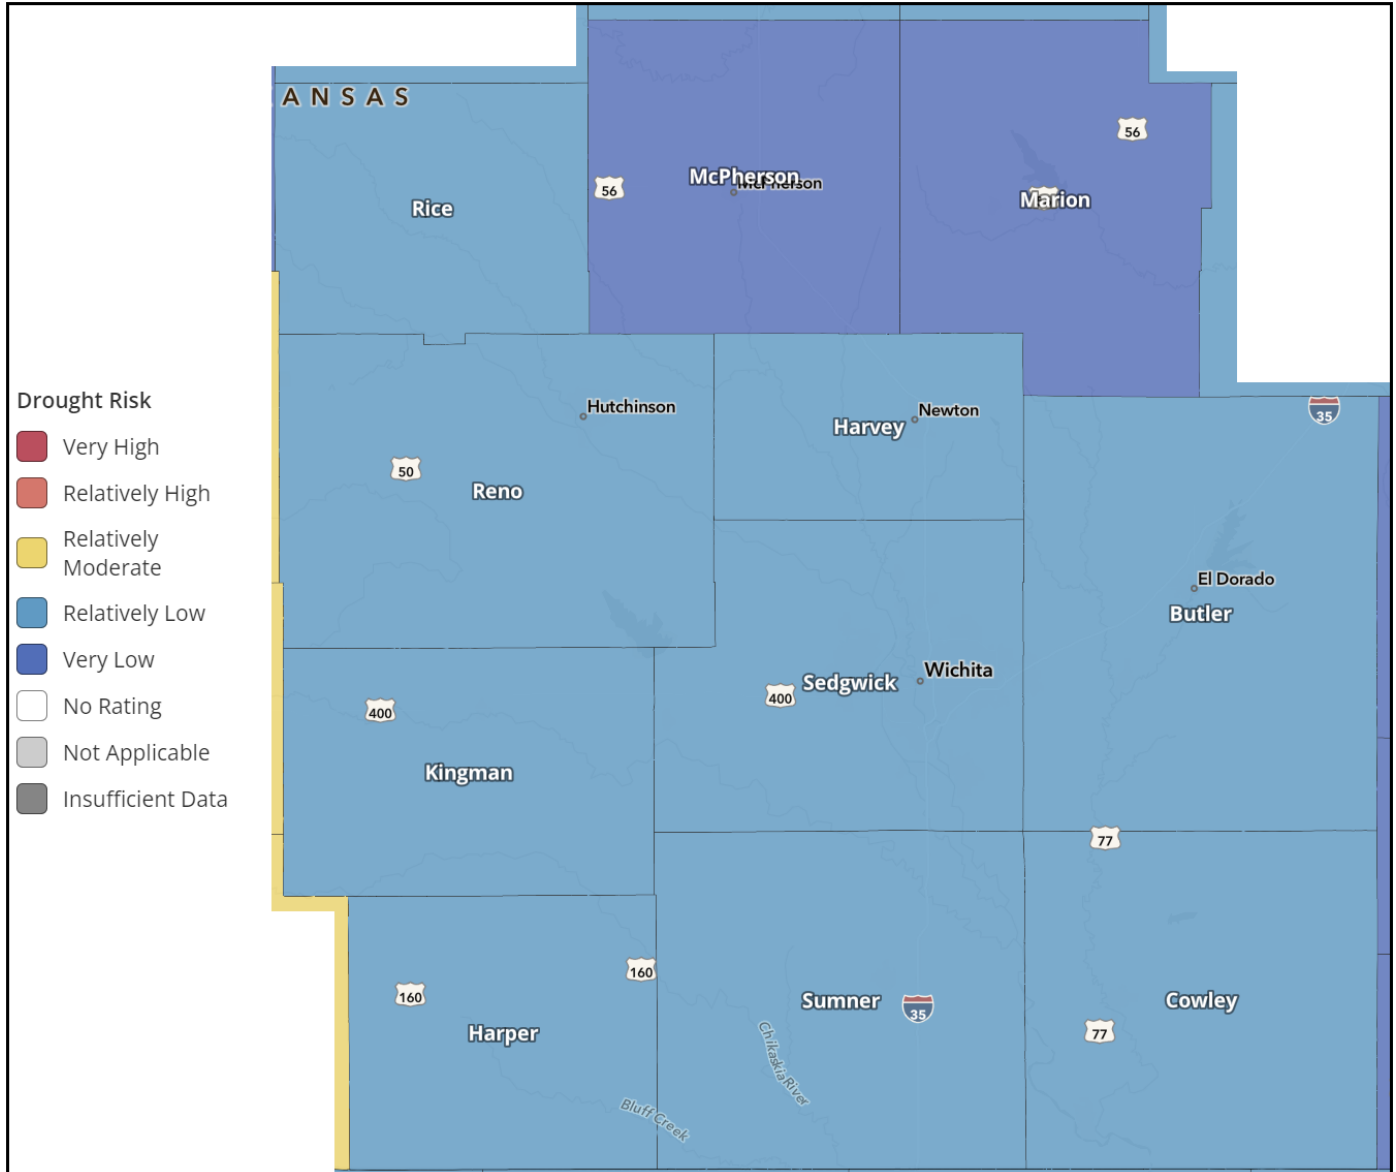

Source: USDA

Although environmental losses are difficult to quantify, increasing public awareness and concern for environmental quality has forced public officials to focus greater attention and resources on these effects. Environmental losses are the result of damage to plant and animal species, wildlife habitat, and air and water quality, wildfires, degradation of landscape quality, loss of biodiversity, and soil erosion. Some of the effects are short-term and conditions quickly return to normal following the end of the drought. Other environmental effects linger for some time or may even become permanent. Wildlife habitat, for example, may be degraded through the loss of wetlands, lakes, and vegetation. However, many species will eventually recover from it if it is a temporary aberration. However, the degradation of landscape quality, with increased soil erosion, may lead to a more permanent loss of biological productivity of the landscape.

Governmental operations and facilities will likely experience minimal impacts from drought conditions, unless there are substantial power, communications, or water outages. However, reduced water availability would likely have an immediate impact on firefighting efforts in urban and suburban areas as fire suppression equipment requires a minimum level of water pressure to activate.

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating counties from drought:

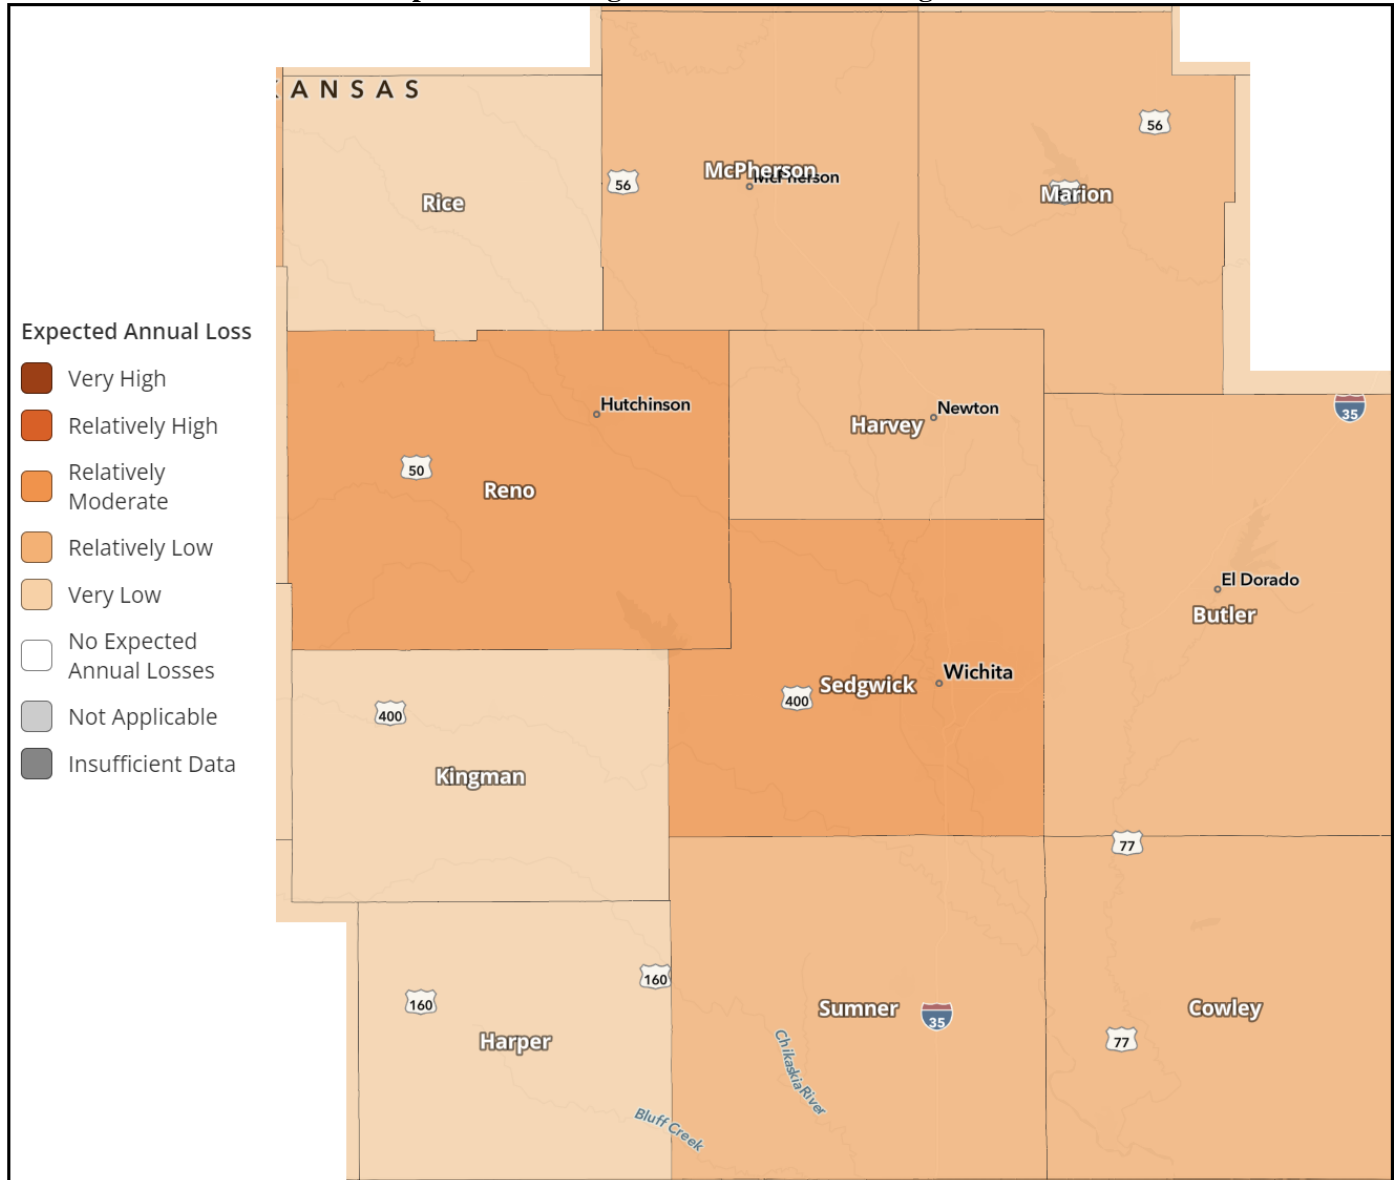

**Map X: Kansas Region G FEMA NRI Drought Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for drought for participating counties within Kansas Region G:

**Map X: Kansas Region G FEMA NRI Drought EAL**

Source: FEMA NRI

The following table indicates the FEMA NRI and EAL analysis for each participating Kansas Region G county for drought:

**Table X: Kansas Region G FEMA NRI and EAL for Drought by County**

County	Risk Index	EAL
Butler	Relatively Low	Relatively Low
Cowley	Relatively Low	Relatively Low
Harper	Relatively Low	Very Low
Harvey	Relatively Low	Relatively Low
Kingman	Relatively Low	Very Low
Marion	Very Low	Relatively Low
McPherson	Very Low	Relatively Low
Reno	Relatively Low	Relatively Moderate
Rice	Relatively Low	Very Low
Sedgwick	Relatively Low	Relatively Moderate
Sumner	Relatively Low	Relatively Low

Source: FEMA NRI

**Consequence Analysis**

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Drought Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	If the drought coincides with warmer months, vulnerable populations may face an increased risk of dehydration, death, heat-related illness, heat stroke. Lower quantities of water may also increase the likelihood of contamination due to higher concentrations of bacteria. During droughts, dry soils and wildfires increase the number of airborne particles, such as pollen and smoke, which can worsen chronic respiratory illnesses.
Impact on Responders	Reduced water availability would likely complicate firefighting efforts in urban and suburban areas where wildfire-fighting tactics such as chemical retardants and controlled burns are less suitable. Some fire suppression equipment requires a minimum level of water pressure to activate. If the drought coincides with warm months, first responders may face increased risk of heat-related injuries or death.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. While the expectation is minimal, this threat may impact an agency's ability to implement their continuity plan based on the hazard's potential to impact power, communications, or water outages. Critical life-saving activities and fire suppression will be directly impacted by these outages.
Delivery of Services	Droughts may impact the delivery of goods and services if there are shortages of raw materials.
Property, Facilities, and Infrastructure	Drought conditions may threaten levels or quality of municipal public water supplies or impact small communities and/or private potable water wells.
Impact on Environment	The potential of drought-related impacts could have significant impacts on supplies of animal feed, livestock, meat and dairy products, and processed grain products, and on crop production. Drought conditions may also increase the potential for fires. Drought is also associated with insect infestations, plant disease, wind erosion of soil, and decrease in levels of water produced by natural aquifers.
Economic Conditions	The economic impacts from a drought could be significant. Droughts have the potential to drain state, and local resources, which will have a significant fiscal impact on the local government.

**Table x: Drought Consequence Analysis**

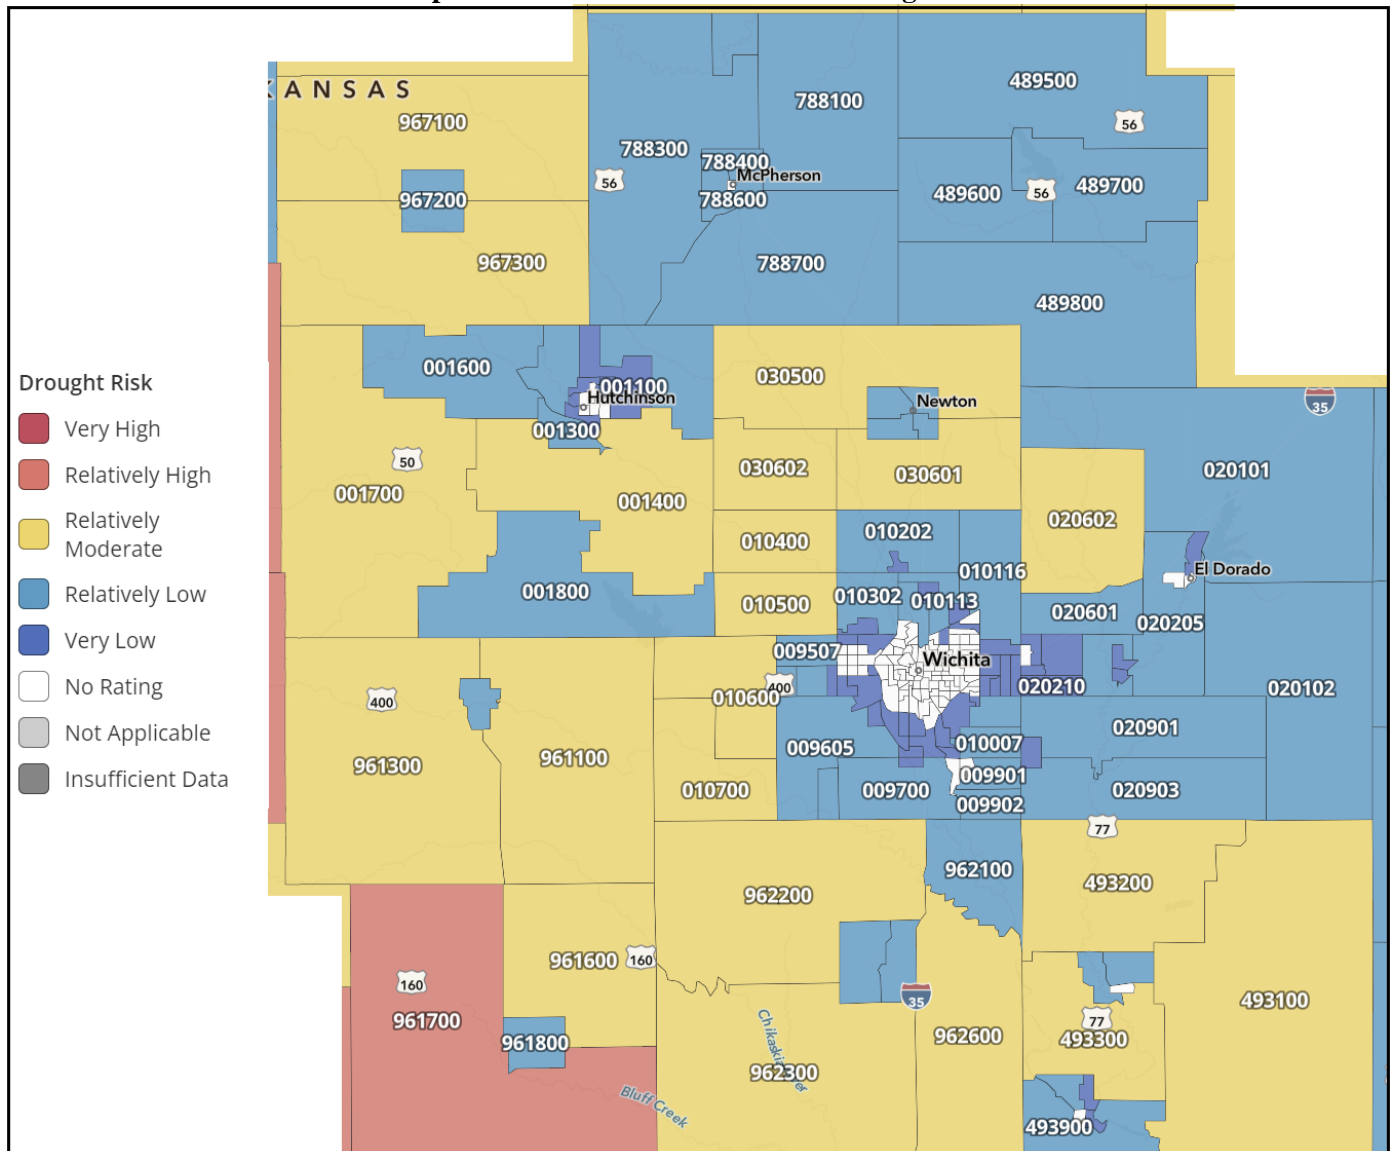

Subject	Potential Impacts
Public Confidence in Governance	Droughts can adversely affect the public, first responders, infrastructure, agriculture, economy, and overall operations. Direct, effective, and timely response by all levels of government is required for public confidence in the state's governance, especially in recognizing and mitigating economic impacts of the drought.

#### 4.10.7 Jurisdictional Risk and Vulnerability

To help understand the risk and vulnerability to drought conditions of participating jurisdictions mapping from the FEMA NRI was run on a census tract level. As the NRI does not generate mapping for individual jurisdictions, census tract analysis is the closest analogue available to understand individual jurisdiction conditions.

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating jurisdictions (as indicated by census tract) from drought:

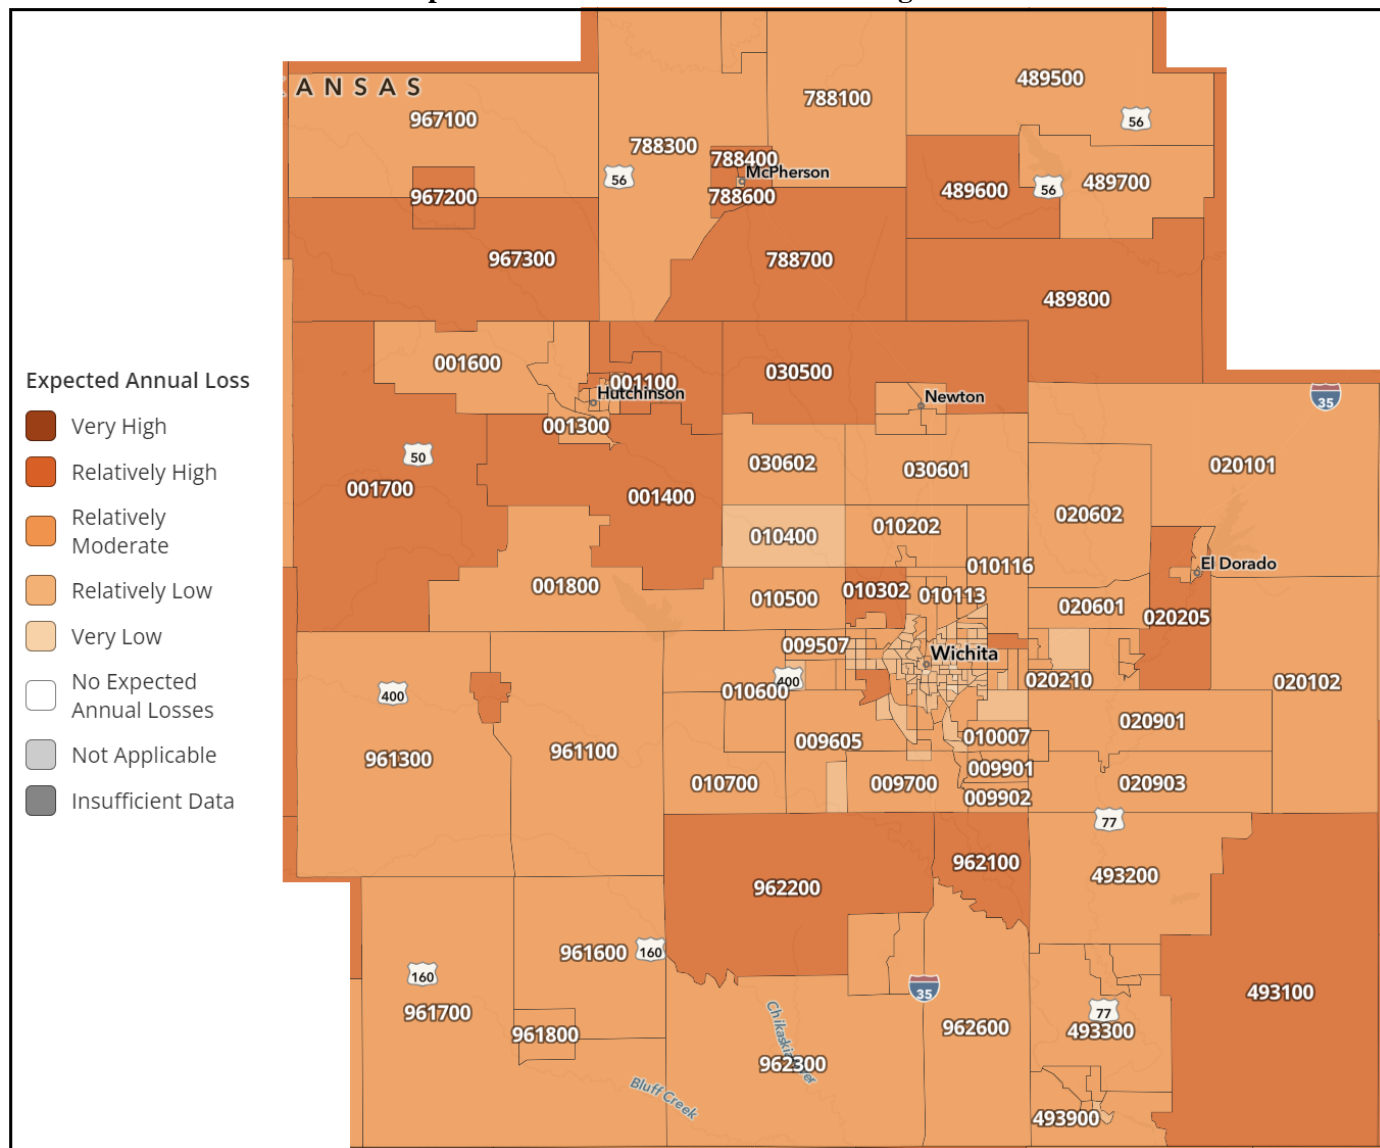

**Map 24: FEMA NRI Jurisdictional Drought Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for drought for participating jurisdictions (as indicated by census tract) within Kansas Region G:

## Map 25: FEMA NRI Jurisdictional Drought EAL

Source: FEMA NRI

At greater risk may be the vulnerable populations, including the especially young, the elderly, and those below the poverty level. Hazard occurrences can exacerbate existing vulnerabilities and create new challenges. Vulnerable populations may have pre-existing health conditions that make them more susceptible to heat-related illnesses and dehydration, both of which can be exacerbated during droughts. Persons on fixed incomes and with limited resources may face difficulties in adapting their homes to withstand hazard conditions or may lack financial resources to cope with the increased costs of food, water, and energy.

The following table details potentially vulnerable populations by Kansas Region G county, along with the change in the populations:

**Table X: Kansas Region G Drought Vulnerable Populations**

<b>County</b>	<b>Under 5</b>	<b>Over 65</b>	<b>In Poverty</b>
Butler County	3,571	11,050	6,468
Cowley County	2,038	6,459	4,801
Harper County	313	1,240	894
Harvey County	1,837	7,077	3,266
Kingman County	388	1,509	874
Marion County	615	2,814	1,253
McPherson County	1,542	6,228	2,630
Reno County	3,219	12,813	8,109
Rice County	528	1,933	1,216
Sedgwick County	33,001	83,812	69,669
Sumner County	1,324	4,612	2,786

Source: US Census Bureau

## 4.11 Earthquake

### 4.11.1 Hazard Description

An earthquake is the result of a sudden release of energy in the Earth's crust that creates seismic waves that are typically caused by the rupturing of geological faults. A fault is a fracture or zone of fractures between two blocks of rock. Faults allow the blocks to move relative to each other, which, when rapidly occurring, causes an earthquake. When stresses in the crust exceed the strength of the surrounding rock, a rupture or break may occur fault plane. The point of origin of an earthquake is known as the hypocenter, which may be deep beneath the surface. The point at the surface directly above the hypocenter is known as the epicentre. Seismic waves radiate out from the hypocenter causing the ground to shake. These waves can travel long distance, but in general are strongest near the epicenter.

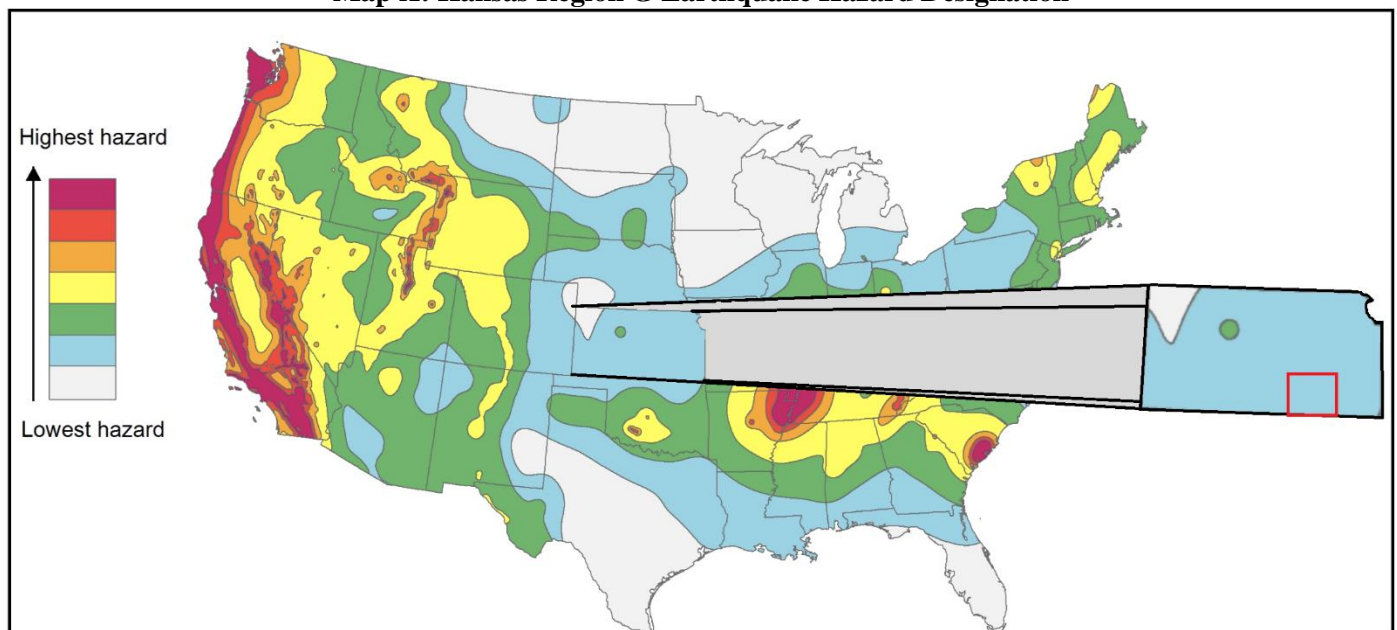

Earthquakes tend to occur along faults, which can be divided into three categories:

- Normal Fault: Resulting from pulling or tension with the overlying block moving down the dip of the fault plane
- Thrust (Reverse) Fault: Resulting from squeezing or compression, with the overlying block moving up the dip of the fault plane
- Strike-Slip (Lateral) Fault: Resulting from either type of stress, with the blocks moving horizontally past one another

### 4.11.2 Location and Extent

Kansas Region G is located within the North American tectonic plate. The North American Plate is a major tectonic plate that covers a significant portion of North America. Kansas is situated on this stable continental plate. Unlike regions near plate boundaries, where tectonic activity is more pronounced, Kansas generally experiences lower seismic activity.

**Map X: Kansas Region G Earthquake Hazard Designation**

Source: USGS

The Humboldt Fault (also known as the Nemaha Uplift) passes through the eastern portion of the region. Most earthquakes in the Humboldt Fault Zone are small and are detected only with instruments.

Map X: Kansas Region G Earthquake Hazard Designation

While earthquakes are relatively rare in Kansas Region G compared to some other parts of the United States, the state is not completely immune to seismic activity. The increased frequency of induced earthquakes in parts of the central United States, including Kansas Region G, has been observed in recent years. These induced earthquakes are often associated with human activities such as wastewater injection from oil and gas production. It's important to note that the risk of earthquakes in any specific area can change over time based on various factors, including human activities and natural geological processes.

Two scales are used when referring to earthquake activity. Estimating the total force of an earthquake is the Richter scale, and the observed damage from an earthquake is the Modified Mercalli Intensity Scale. Additionally, both Peak Ground Acceleration (%g) and Velocity (cm/s) can be used to measure and quantify force and movement. Peak Ground Acceleration (PGA) is a measure of the maximum acceleration experienced by a point on the Earth's surface during an earthquake. It quantifies the intensity of ground shaking at a specific location and is a crucial parameter for assessing seismic hazard. PGA is typically measured in units of gravity (g), where 1 g is approximately equal to the acceleration due to Earth's gravity (about 9.81 meters per second squared or 32.2 feet per second squared). So, if the PGA at a location is 0.2 g, it means the ground acceleration during the earthquake was 20% of the acceleration due to gravity. PGA can vary significantly from one location to another during the same earthquake event. Factors that influence PGA include the earthquake's magnitude, depth, distance from the epicenter, and local geological conditions.

The following table equates the above referenced earthquake scales.

Table X: Earthquake Magnitude Scale Comparison

Mercalli Scale Intensity	Verbal Description	Richter Scale Magnitude	Acceleration (%g)	Velocity (cm/s)	Witness Observations
I	Instrumental	1 to 2	0.17%	<0.1	None
II	Feeble	2 to 3	1.40%	1.1	Noticed only by sensitive people

**Table X: Earthquake Magnitude Scale Comparison**

<b>Mercalli Scale Intensity</b>	<b>Verbal Description</b>	<b>Richter Scale Magnitude</b>	<b>Acceleration (%g)</b>	<b>Velocity (cm/s)</b>	<b>Witness Observations</b>
III	Slight	3 to 4	1.40%	1.1	Resembles vibrations caused by heavy traffic
IV	Moderate	4	3.90%	3.4	Felt by people walking; rocking of free-standing objects
V	Rather Strong	4 to 5	9.20%	8.1	Sleepers awakened; bells ring
VI	Strong	5 to 6	18.00%	16	Trees sway, some damage from falling objects
VII	Very Strong	6	34.00%	31	General alarm, cracking of walls
VIII	Destructive	6 to 7	65.00%	60	Chimneys fall and some damage to building
IX	Ruinous	7	124.00%	116	Ground crack, houses begin to collapse, pipes break
X	Disastrous	7 to 8	>124.0%	>116	Ground badly cracked, many buildings destroyed. Some landslides
XI	Very Disastrous	8	>124.0%	>116	Few buildings remain standing, bridges destroyed.
XII	Catastrophic	8 or greater	>124.0%	>116	Total destruction; objects thrown in air, shaking and distortion of ground

#### 4.11.3 Previous Occurrences

The Kansas Geological Survey maintains earthquake records for the State of Kansas. Data indicates that while the State has had numerous earthquakes, the largest on record occurred in June 1867 in Wamego (Pottawatomie County) and was measured at VII on the Mercalli Scale. The following table details notable earthquake events, in descending order of magnitude, for the State of Kansas, with Kansas Region G location highlighted in bold:

**Table 30: Kansas Earthquakes Greater Than Modified Mercalli Scale Intensity IV**

<b>Date</b>	<b>County</b>	<b>Nearest City</b>	<b>Mercalli Scale Intensity</b>
4/24/1867	Pottawatomie	Wamego	VII
1/7/1906	Riley	Manhattan	VII
4/27/1879	Rooks	Stockton	VI
1/28/1932	Ellis	Ellis	VI
8/9/1931	Wyandotte	Turner	VI
8/9/1931	Wyandotte	Turner	VI
8/9/1931	Wyandotte	Turner	VI
3/18/1927	Doniphan	White Cloud	VI
11/8/1875	Shawnee	Topeka	V
4/13/1961	Norton	Norton	V

10/27/1904	Ford	Dodge City	IV

Source: Kansas Geological Survey

The following map from the Kansas Geological Survey illustrates the location of magnitude 4.0 or greater earthquakes in Kansas Region G from 1900 to 2023:

**Map X: Kansas Earthquakes Greater Than Modified Mercalli Scale Intensity IV**

Source: Kansas Geological Survey

While earthquake events do occur in Kansas Region G, they tend to occur at a much lower intensity than more seismically active areas of the country.

#### 4.11.4 Probability of Future Events

Predicting the occurrence of earthquakes is tremendously challenging due to the large number of factors involved. However, mapping from the USGS can help detail future earthquake probability. The following map, from the USGS, illustrates potential earthquake hazard for Kansas Region G:

**Map X: Expected Number of Occurrences or Damaging Earthquake Shaking in 10,000 Years**

Source: USGS

#### **4.11.5 Projected Changes in Location, Intensity, Frequency, and Duration**

Due to the very long-term nature of geological process, including earthquakes, the seismic hazard for Kansas Region G is not to change during the life of this plan.

#### **4.11.6 Vulnerability and Impact**

Although earthquakes occur infrequently in Kansas Region G, a large magnitude quake could cause significant impacts. In a larger magnitude earthquake, ground movement can lead to building and infrastructure collapse. Additionally, concurrent hazards caused by earthquakes may include fire, hazardous material release, landslides, tsunamis (if in an offshore environment), and dam failure. As a result, and related to the impacts of building and infrastructure damage and collapse, deaths and injuries are likely.

Structures in Kansas Region G may be particularly vulnerable to the effect of a moderate to large earthquake as seismic design criteria are not required for either new building construction or old building renovation. Of particular concern to are unreinforced masonry buildings. An unreinforced masonry building is constructed of brick or masonry with no steel reinforcing bars. Because these buildings were not built using modern building codes, they are much more likely to experience damage or collapse during an earthquake. Currently, no surveys exist as to the extent of these buildings within Kansas Region G, or the state as a whole.

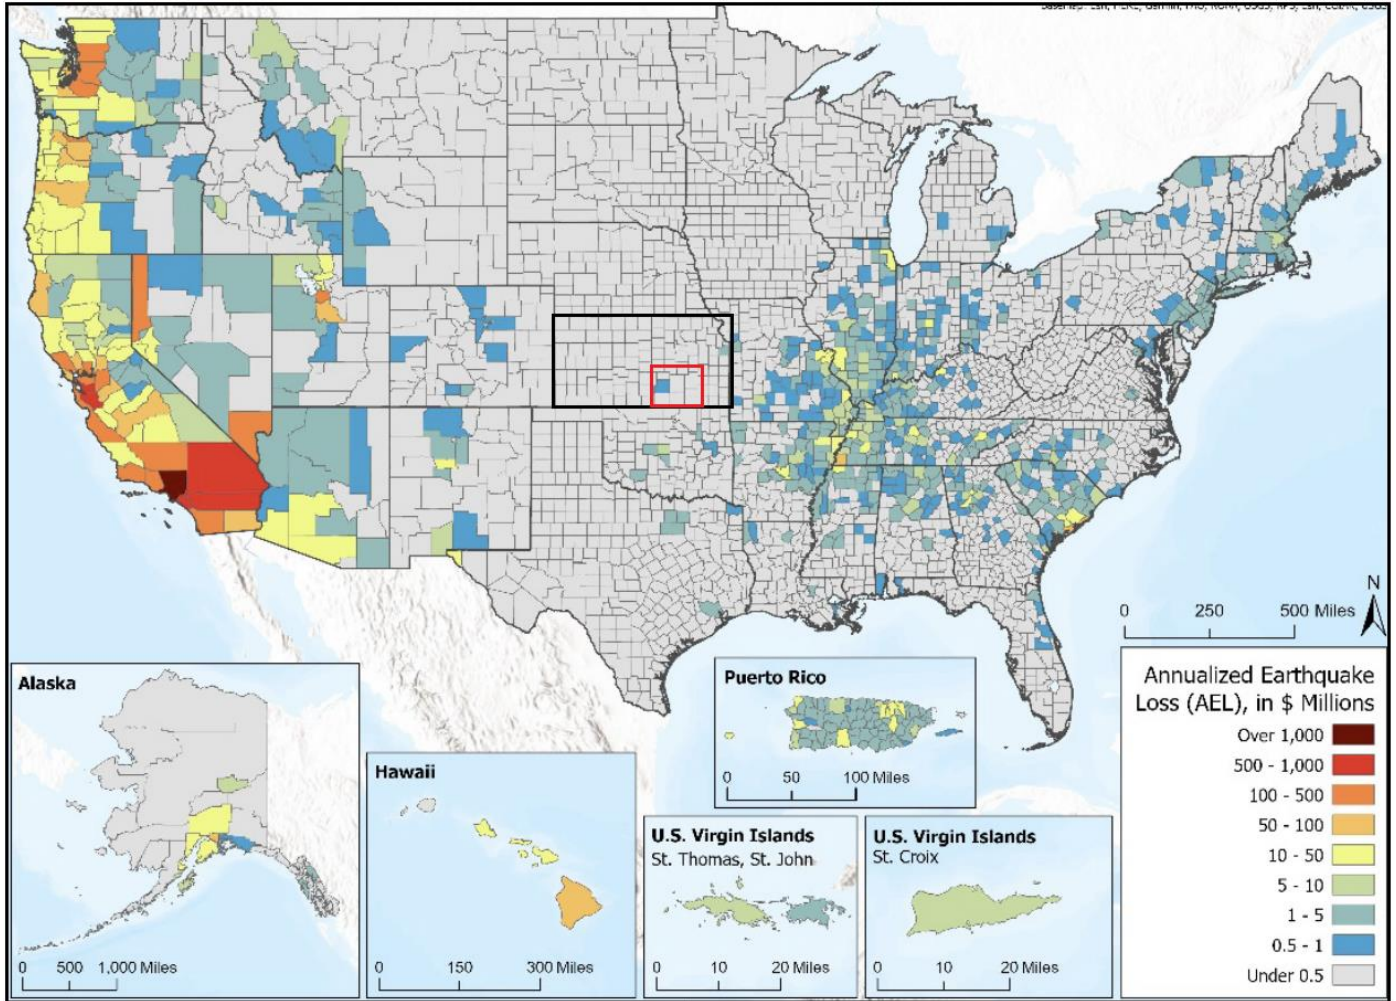

Critical facilities are at potential risk to earthquakes, especially those that store or transport handle hazardous materials. Unauthorized releases from these facilities may cause health impacts, environmental damage, or force road or area closures. Infrastructure is also at high risk to earthquakes, as extensive ground movement can either compress or rupture the infrastructure (pipelines, underground utilities) or cause a collapse (above ground utilities, bridges). Roads and other transportation infrastructure damaged during an earthquake would initially be unusable until inspected for structural integrity.

Recent earthquakes worldwide depict a pattern of steadily increasing damage and losses that are due to significant growth in earthquake-prone urban areas and vulnerability of older building stock, including buildings constructed within the past 20 years. In 2017 FEMA released the Hazus Estimated Annualized Earthquake Losses for the United States that reported recent earthquakes show a pattern of steadily increasing damages and losses due to:

- Significant growth in earthquake-prone urban areas
- Vulnerability of the older building stock

Data in the report details the Annualized Earthquake Loss measures, the annualized earthquake losses in any single year. The following maps details Annualized Earthquake Loss values for Kansas Region G:

**Map X: Kansas Region G Annualized Earthquake Losses**

Using available HAZUS data, the following potential losses from a worst-case scenario 2,500-year 6.7 Magnitude earthquake. However, these assumed vulnerabilities should be viewed as theoretical due to the tremendous number of variables involved in a potential earthquake event.

**Table 4.X: Kansas Region G Probabilistic 6.7 Magnitude Earthquake Damages**

County	Total Earthquake Losses	Displaced Households
Butler	\$25,491,000	9
Cowley	\$22,998,000	9
Harper	\$5,855,000	1
Harvey	\$14,206,000	7
Kingman	\$4,740,000	1
Marion	\$5,276,000	2
McPherson	\$11,837,000	4
Reno	\$25,671,000	11
Rice	\$3,738,000	1
Sedgwick	\$251,757,000	138
Sumner	\$16,563,000	4

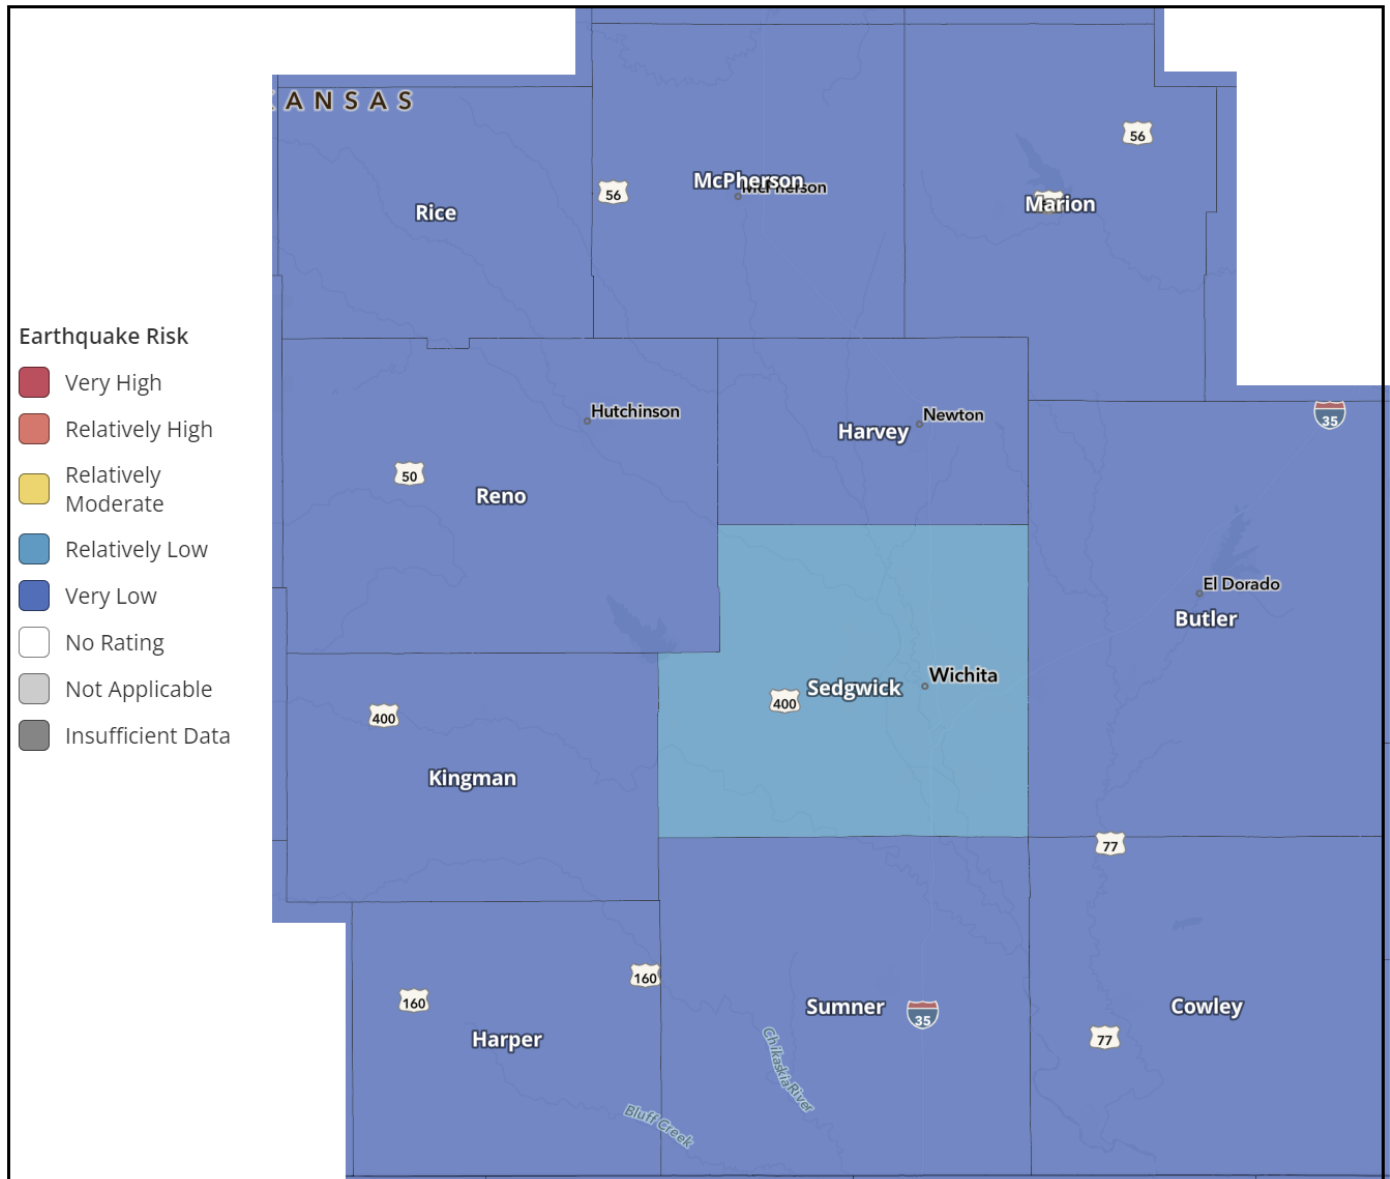

Source: KDEM and HAZUS

The risk to local and county operations and facilities from earthquakes can vary significantly depending on the location and the level of seismic activity. Potential risks to operations and buildings from earthquakes include:

- **Structural Damage:** Earthquakes can cause significant structural damage to government buildings, including state capitol buildings, offices, and infrastructure such as bridges and roads. The extent of damage depends on the earthquake's magnitude, depth, and proximity to populated areas.
- **Injury and Loss of Life:** Earthquakes can result in injuries and loss of life among government employees, particularly if buildings are not constructed to withstand seismic forces or if there are insufficient emergency evacuation plans and procedures in place.
- **Disruption of Government Operations:** Earthquakes can disrupt the normal functioning of government operations. Damaged buildings may need to be evacuated or temporarily closed for repairs, which can affect the delivery of services.
- **Communication Disruptions:** Seismic activity can damage communication infrastructure, including telephone lines and data networks. This can hinder the ability to communicate internally and with the public during and after an earthquake.
- **Power Outages:** Earthquakes can lead to power outages by damaging electrical infrastructure such as substations and power lines. Government buildings may lose power, affecting critical operations and services.
- **Loss of Records and Data:** Earthquakes can result in the loss of important records and data stored in government buildings. This can have legal and operational implications.
- **Emergency Response:** Government agencies may need to activate emergency response plans, deploy first responders, and coordinate relief efforts in the aftermath of a significant earthquake.
- **Budgetary Impact:** The costs associated with repairing and retrofitting government buildings and infrastructure after an earthquake can be substantial and may strain state budgets.

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating counties from earthquakes:

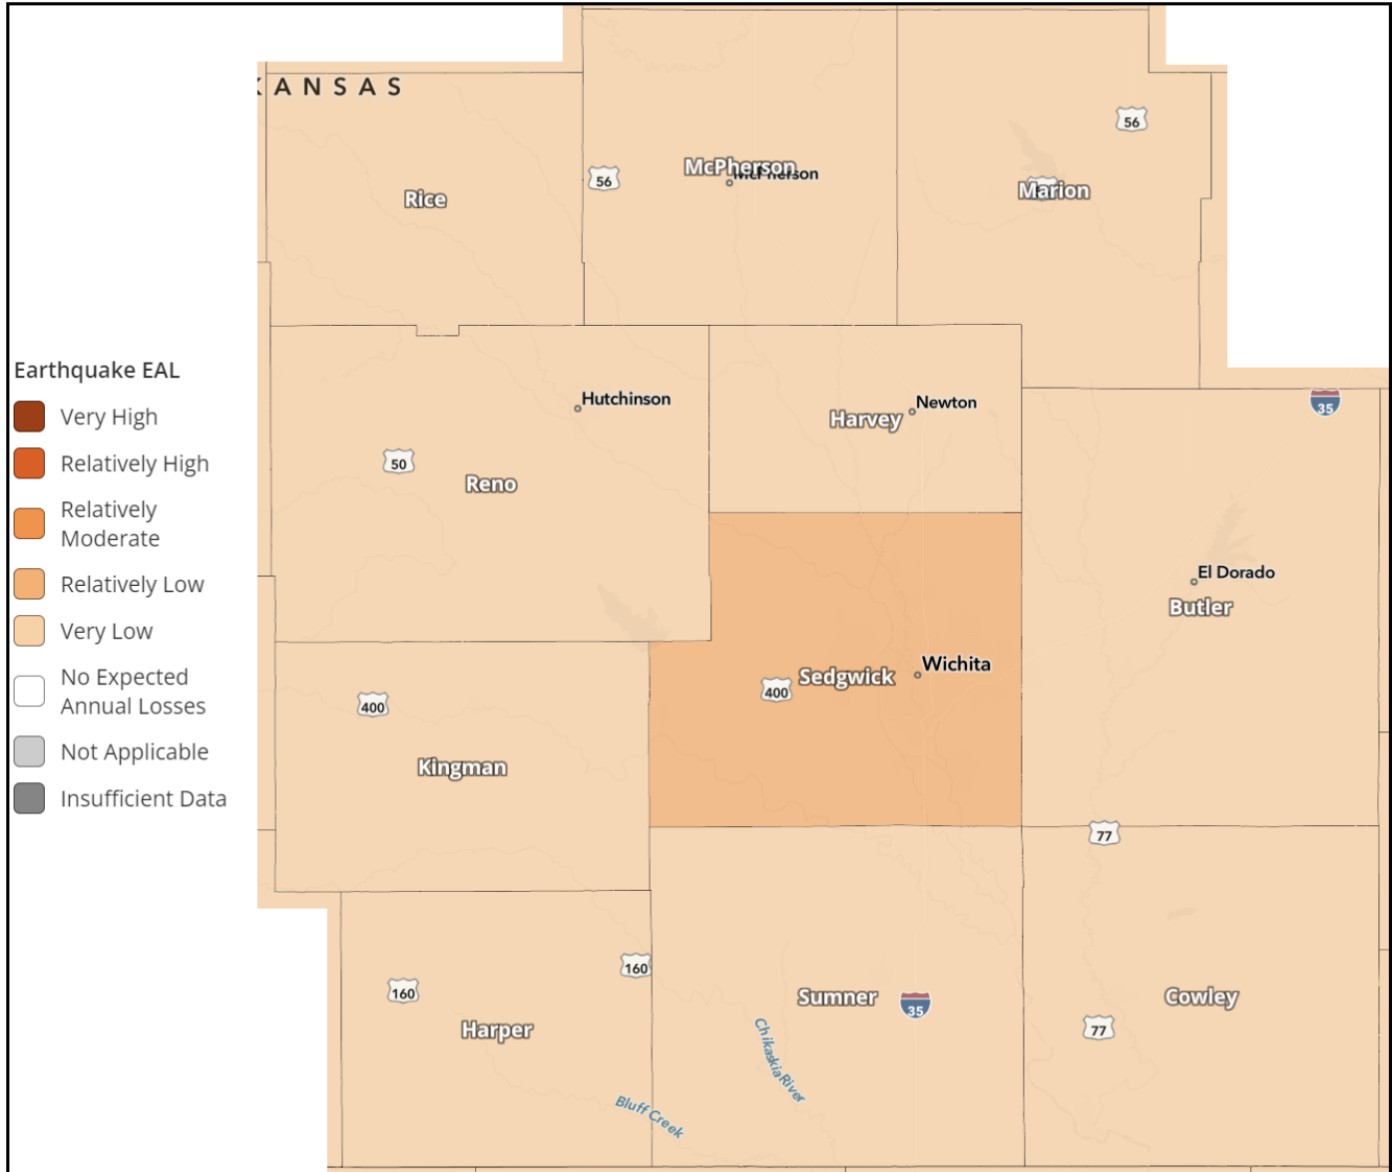

**Map X: Kansas Region G FEMA NRI Earthquake Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for earthquakes for participating counties within Kansas Region G:

**Map X: Kansas Region G FEMA NRI Earthquake EAL**

Source: FEMA NRI

The following table indicates the FEMA NRI and EAL analysis for each participating Kansas Region G county for earthquake:

**Table X: Kansas Region G FEMA NRI and EAL for Earthquake by County**

County	Risk Index	EAL
Butler	Very Low	Very Low
Cowley	Very Low	Very Low
Harper	Very Low	Very Low
Harvey	Very Low	Very Low
Kingman	Very Low	Very Low
Marion	Very Low	Very Low
McPherson	Very Low	Very Low
Reno	Very Low	Very Low
Rice	Very Low	Very Low
Sedgwick	Very Low	Relatively Low
Sumner	Very Low	Very Low

Source: FEMA NRI

**Consequence Analysis**

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Earthquake Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	Earthquakes may cause injury or death to people from vehicle accidents, falling objects, or structural failure. There may be a large number of people seeking treatment for traumatic injuries. Ground shaking may result in broken service lines or pipelines, triggering the release of hazardous materials or waste materials.
Impact on Responders	The extent of the damage to infrastructure such as roads and bridges and communications can greatly impact first responders' ability to access or transport victims. Equipment, facilities, or other assets may be damaged and restrict first responders' capacity to respond to calls for assistance.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. Earthquakes could potentially impact critical infrastructure resulting in power outages, access to roadways or public transportation, damage to facilities or infrastructure, including alternate locations.
Delivery of Services	Delivery of services may be impacted by dangerous transportation conditions, causing food, water, and resource systems to be delayed or halted. Waterway infrastructure may be damaged or malfunction, stopping barge and ship traffic.
Property, Facilities, and Infrastructure	Unreinforced masonry structures are inherently vulnerable to seismic forces. All critical facilities and transportation corridors and pipelines can be impacted. Ground shaking can lead to the collapse of buildings and bridges, and disrupt gas, lifelines, electric, and phone service.
Impact on Environment	Earthquakes have the potential to trigger secondary hazards such as fire, flash flooding, hazardous materials release, slope failure, dam failures, and tsunamis, all potentially devastating to the environment. These secondary hazards can completely wipe out habitats and environments, cause significant injury to animals or livestock, or contaminate certain components of the environment.
Economic Conditions	Earthquakes pose a fiscal impact on the local and county governments, even if some of those costs can be recouped through federal grant reimbursements. Local, county, and state resources may be drained by response and recovery efforts. Additionally, a severe

**Table x: Earthquake Consequence Analysis**

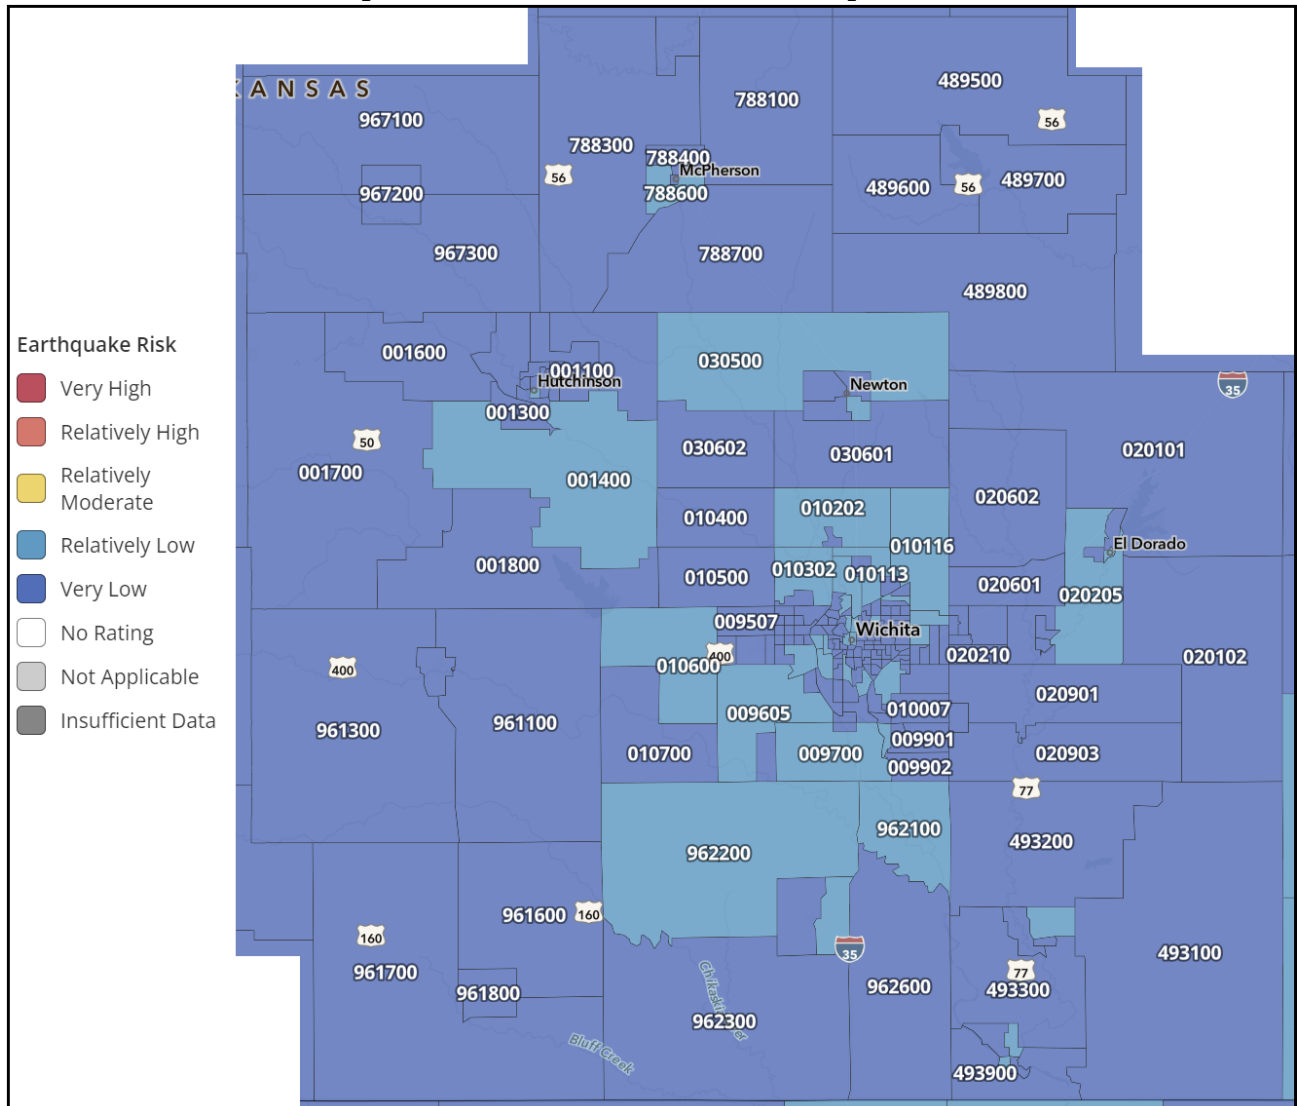

Subject	Potential Impacts
	earthquake would affect the ability of businesses to maintain operations. If the private sector is not able to re-establish operations this would also impact the state economy.
Public Confidence in Governance	Governmental response, on all levels, requires direct actions that must be immediate and effective to maintain public confidence. If the state takes a long time to begin recovery operations, or for the public to see recover operations, this will have a negative impact on the public's confidence in the state's governance.

#### 4.11.7 Jurisdictional Risk and Vulnerability

To help understand the risk and vulnerability to earthquakes of participating jurisdictions mapping from the FEMA NRI was run on a census tract level. As the NRI does not generate mapping for individual jurisdictions, census tract analysis is the closest analogue available to understand individual jurisdiction conditions.

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating jurisdictions (as indicated by census tract) from earthquakes:

**Map 24: FEMA NRI Jurisdictional Earthquake Risk**

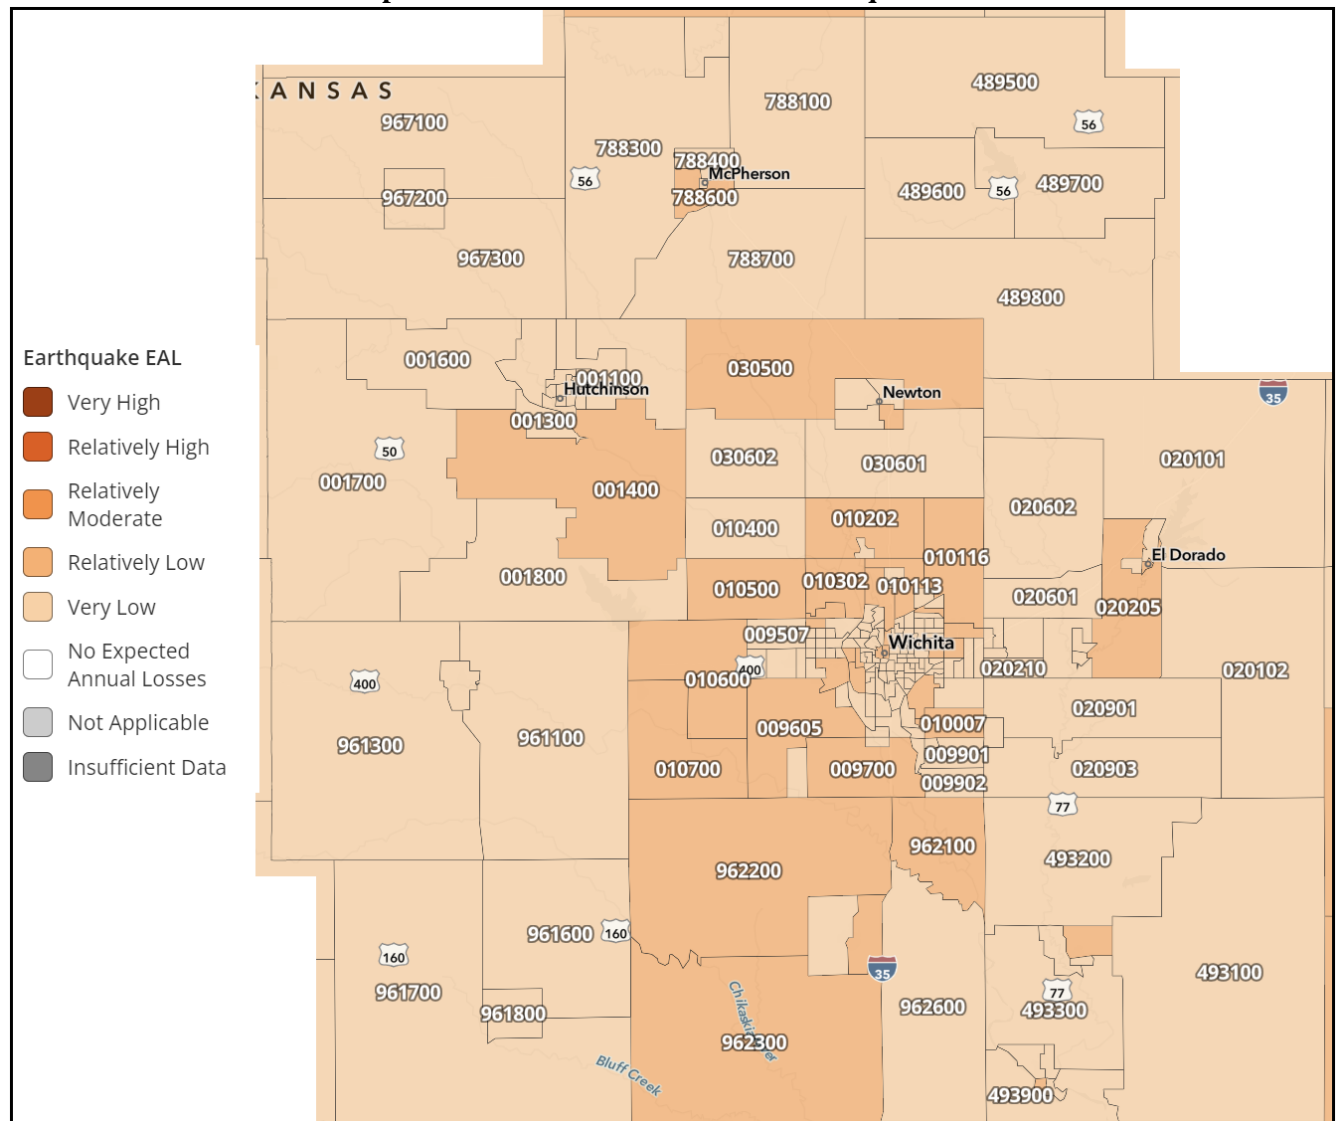

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for earthquakes for participating jurisdictions (as indicated by census tract) within Kansas Region G:

**Map 25: FEMA NRI Jurisdictional Earthquake EAL**

Source: FEMA NRI

## 4.12 Extreme Temperatures

### 4.12.1 Hazard Description

Extreme temperature events occur when climate conditions produce temperatures well outside of the predicted norm. These extremes can have severe impacts on human health and mortality, natural ecosystems, agriculture, and other economic sectors.

The Centers for Disease Control and Prevention (CDC) identifies the following six groups as being especially vulnerable to extreme temperatures:

- Older Adults (aged 65)
- Infants and Children
- Individuals with Chronic Conditions
- Low-income Individuals
- Athletes
- Outdoor workers

### 4.12.2 Location & Extent

The Midwest climate region is known for extremes in temperature. Specifically, Kansas lacks any mountain ranges that could act as a barrier to cold air masses from the north or hot, humid air masses from the south or any oceans or large bodies of water that could provide a moderating effect on the climate. The polar jet stream is often located over the region during the winter, bringing frequent storms and precipitation. Kansas summers are generally warm and humid due to the clockwise air rotation caused by Atlantic high-pressure systems bringing warm humid air up from the Gulf of Mexico.

All of Kansas Region G is vulnerable to both extreme heat and extreme cold, defined as follows.

- **Extreme Heat:** Extreme heat is defined as temperatures that hover 10 degrees or more above the average high temperature for the region and last for several weeks. Ambient air temperature is one component of heat conditions, with relative humidity being the other. Humid or muggy conditions, which add to the discomfort of high temperatures, occur when an area of high atmospheric pressure traps moisture laden air near the ground.
- **Extreme Cold:** Although no specific definition exists for extreme cold, an extreme cold event can generally be defined as temperatures at or below freezing for an extended period of time. Extreme cold events are usually part of Winter Storm events but can occur during anytime of the year and can have devastating effects on agricultural production.

Data from the following High Plains Regional Climate Center weather stations from the first available date to present was obtained to illustrate regional temperature norms.

**Table 4.46: Regional Average Temperatures**

	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Annual
Average Minimum (F)	20.8	23.8	32.8	43.9	54.0	63.7	68.2	67.0	58.3	46.1	33.3	23.7	44.6
Average Maximum (F)	42.6	47.3	57.7	68.9	77.4	87.3	93.0	92.4	83.7	71.8	56.5	44.7	68.6

Source: High Plains Regional Climate Center

The following graph illustrates the above data.

**Chart X: Kansas Region G Average Monthly Temperatures (Degrees Fahrenheit)**

Source: NOAA

#### 4.12.3 Previous Occurrences

The following chart details the annual number of hot days (maximum temperature of 100°F or higher) for Kansas from 1900 to 2020. Data indicates that since 2000, Kansas has experienced some of the highest springtime temperatures on record, while summer temperatures have been near to above average. The warmest summers on record were 1934 and 1936.

**Chart X: Number of Days with Maximum Temperature of 90° F or Higher**

Source: NOAA NCEI State Climate Summary 2022 for Kansas

The following chart details the annual number of very cold days (minimum temperature of 0°F or lower) for Kansas from 1900 to 2020. Since 1990, Kansas has experienced a near to below average number of very cold nights, indicative of overall winter warming in the region,

**Chart X: Number of Days with Minimum Temperature of 0° F or Less**

Source: NOAA NCEI State Climate Summary 2022 for Kansas

Data from the High Plains Regional Climate Center indicates the following historic high and low temperatures.

**Table X: Kansas Region G Historic Temperatures**

County	Historic Low Temperature (F)	Historic High Temperature (F)
Butler	-28	117
Cowley	-27	118
Harper	-15	115
Harvey	-28	117
Kingman	-17	116
McPherson	-22	117
Marion	-24	110
Reno	-20	113
Rice	-18	113
Sedgwick	-21	113
Sumner	-20	120

Source: High Plains Regional Climate Center

Additionally, data from the NCEI from 2009 through 2023 indicates the following recorded extreme temperature events. As these events tend to cover large areas, they are reported as regional:

**Table x: Kansas Region G NCEI Extreme Temperature Events, 2009 - 2023**

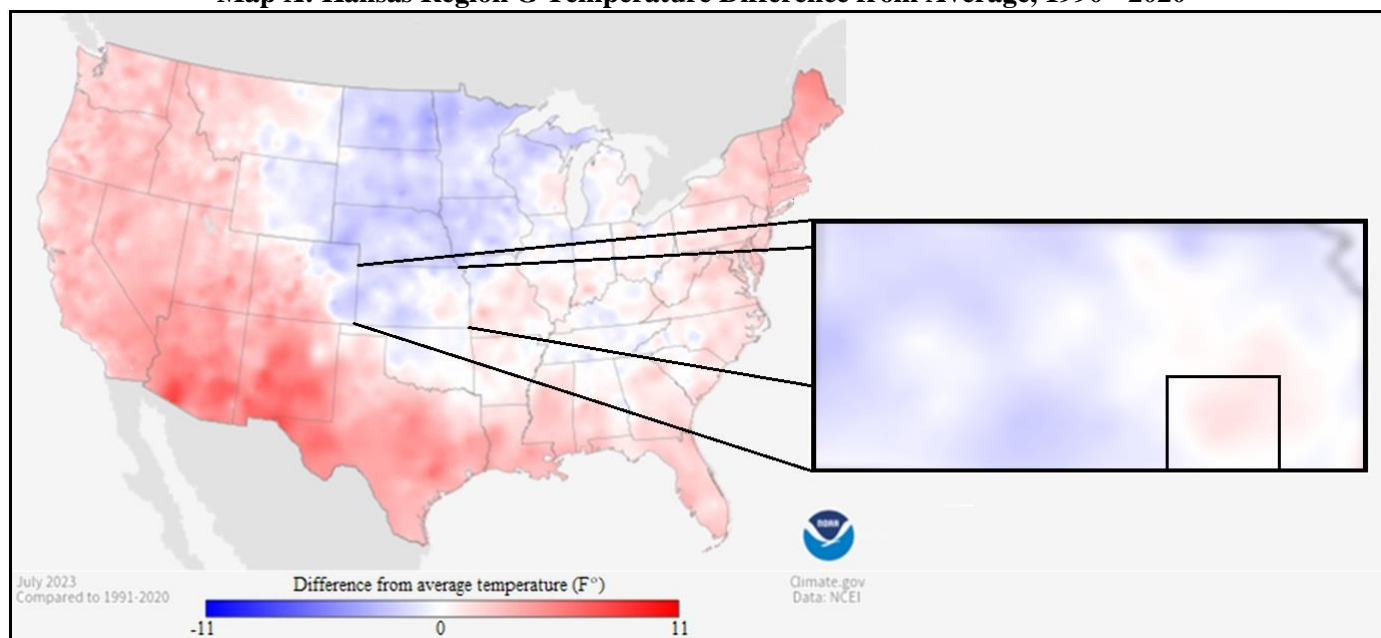

County	Event Type	Number of Events	Property Damage	Deaths	Injuries
Kansas Region G	Cold	0	\$0	0	0
	Heat	11	\$0	2	0

Source: NOAA NCEI

#### 4.12.4 Probability of Future Events

Predicting the probability of extreme temperature occurrences is tremendously challenging due to the large number of factors involved. Available data suggests that both the average high temperatures and the record high temperature will likely increase over the coming years as indicated by the following map:

**Map X: Kansas Region G Temperature Difference from Average, 1990 - 2020**

Source: NOAA

Temperatures in Kansas Region G have risen by 1.5° F since the early 1900s, with the number of hot days above the long-term average since the 1990s. There is no long-term trend in very warm nights or extremely hot days, although both were slightly above average during the 2010–2014 period. number of very cold nights has been mostly below average since 1990.

#### 4.12.5 Projected Changes in Location, Intensity, Frequency, and Duration

When discussing extreme temperatures, climate change should be considered as it may markedly change future events. Recent climate modeling results indicate that extreme temperature events may become more common for Kansas Region G, especially heat. Recent multiyear periods have been among some of the warmest on record for Kansas, comparable to the extreme heat of the 1930s, when intense drought exacerbated hot summer conditions. Recent spring temperatures have been above average, which may have implications for crop planting. Summer temperatures have been near or above average since 2000, but there is no long-term trend in very warm nights or extremely hot days, although both are trending slightly above average. The number of very cold nights has been mostly below average since 1990, and the freeze-free season has also lengthened, averaging about nine days longer in this century than the 20th century average.

Rising average temperatures produce a more variable climate system which may result in an increase in the frequency and severity of some extreme weather events including longer and hotter heat waves. Additionally, rising temperatures

can harm air quality and amplify existing threats to human health. Warmer weather can increase the production of ground-level ozone, a pollutant that causes lung and heart problems. Heat stress is expected to increase as climate change brings hotter summer temperatures and more humidity. Certain people are especially vulnerable, including children, the elderly, the sick, and those living below the poverty line.

The following chart indicates the projected temperature change for Kansas Region G utilizing two global climate models. One model utilizes information in which greenhouse gas emissions continue to increase (higher emissions), with the other model utilizing information in which greenhouse gas emissions increase at a slower rate (lower emissions). Temperatures in, detailed by the orange line, have risen 1.5° F since the beginning of the early 1900s. Based on both the higher emission and lower emission models, continued warming is projected throughout this century.

**Chart X: Kansas Region G Observed and Projected Temperature Change Based on Greenhouse Gas Emissions**

Source: NOAA NCEI State Climate Summary 2022 for Kansas

**4.12.6 Vulnerability and Impact**

While difficult to quantify, the impacts of future extreme temperature may have far reaching impacts. The incidence of wildfires increases substantially during extended periods of extreme heat, which in turn places both human and wildlife populations at higher levels of risk. Although environmental impacts are difficult to quantify, losses to plant and animal species, wildlife habitat, and air and water quality, wildfires, degradation of landscape quality, loss of biodiversity, and soil erosion may result from extended periods of extreme temperatures.

A primary concern with this hazard are human health safety issues, as extreme temperatures can be a direct cause of death. Specific at-risk groups include outdoor workers, farmers, young children, and senior citizens. Compounding these concerns is the potential loss of electric power due to increased strain on power generation and distribution due to increased air conditioning or heating needs.

Extreme temperature impacts on humans can be measured for both heat and cold. The following table discusses potential impacts on human health related to excessive heat.

**Table X: Extreme Heat Impacts on Human Health**

Heat Index Temperature	Potential Impact on Human Health
80-90° F	Fatigue possible with prolonged exposure and/or physical activity
90-105° F	Sunstroke, heat cramps, and heat exhaustion possible
105-130° F	Heatstroke/sunstroke highly likely with continued exposure

Source: National Weather Service Heat Index Program

Exposure to direct sun can increase Heat Index values by as much as 15°F. The zone above 105°F corresponds to a Heat Index that may cause increasingly severe heat disorders with continued exposure and/or physical activity. The following graph, from the NWS, indicates Heat Index values.

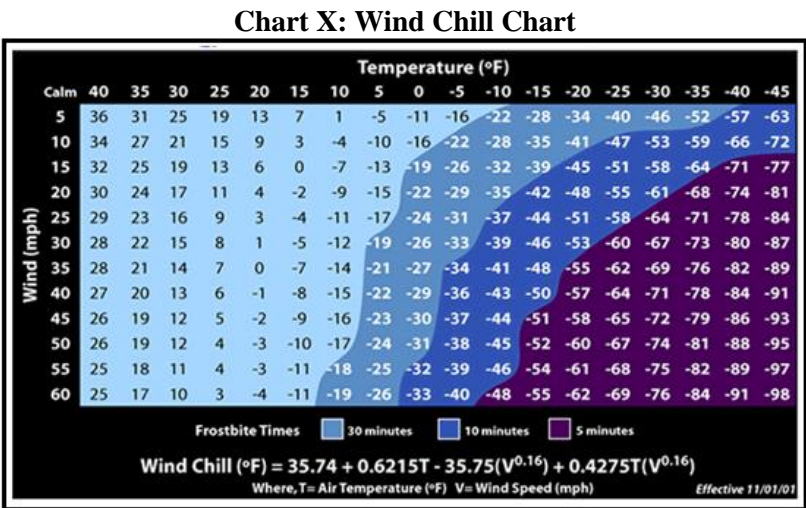

Source: NWS

Extreme cold temperatures can result in a variety of concerns, including:

- Frostbite: The freezing of skin and the body tissue just beneath it
- Hypothermia: Dangerously low body temperature (and the most common winter weather killer)

When extremely cold temperatures are accompanied by strong winds the result can be potentially lethal wind chills. Wind chill is the temperature your body feels when the air temperature is combined with the wind speed, and is based on the rate of heat loss from exposed skin caused by the effects of wind and cold. As the speed of the wind increases, it can carry heat away from your body much more quickly, causing skin temperature to drop. The wind chill chart shows the difference between the actual air temperature and the perceived temperature due to wind, and amount of time until frostbite occurs.

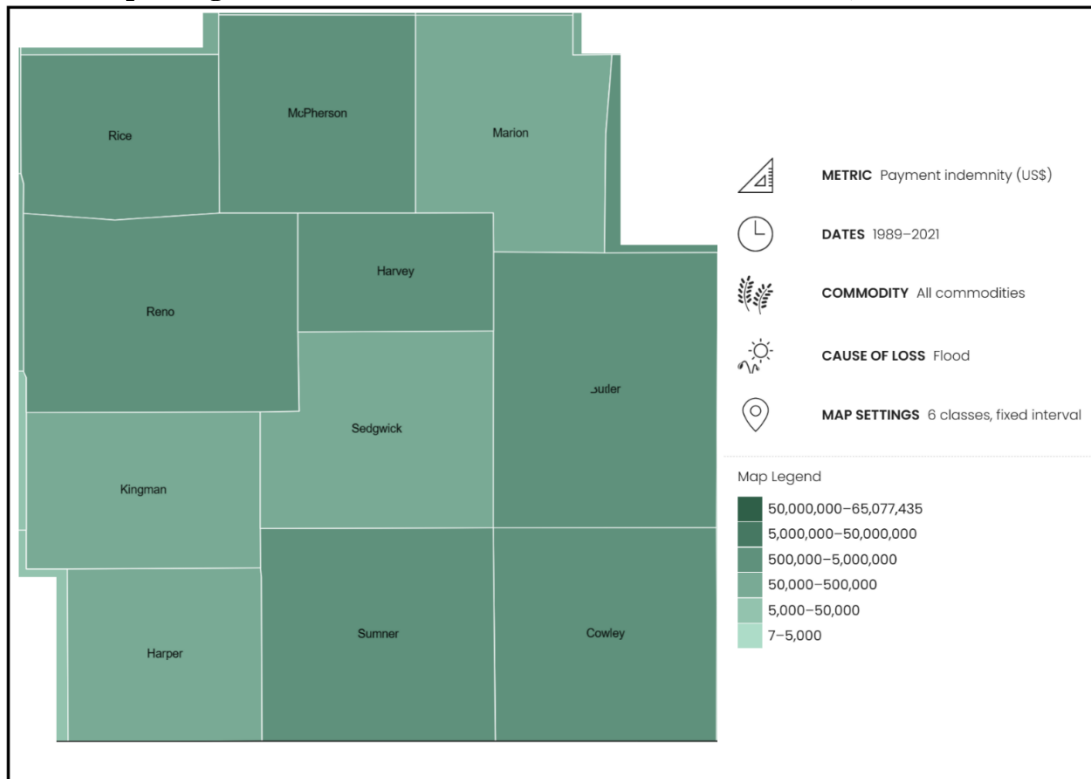

Source: NOAA

Extreme heat can cause significant damage to the local environment by dehydrating vegetation and wildlife, which may result in cascading effects to the surrounding environment, such as drought, wildfires, mudslides, or landslides. Extreme temperatures may severely decrease the yield of the agricultural sector. The yield of cash crops may be reduced, livestock may be adversely impacted by extreme heat, or grazing losses may be incurred by farmers or ranchers; potentially resulting in decreased food security. In the event of significant agricultural losses caused by extreme heat or drought, some assistance may be available to impacted farms or ranches.

Extreme heat conditions can cause significant agricultural impacts. The following map from the United States Department of Agriculture details total agricultural losses, by county, due to extreme conditions from 1989 to 2021:

**Map X: Agricultural Losses Due to Extreme Heat Conditions, 1989 to 2021**

Source: USDA

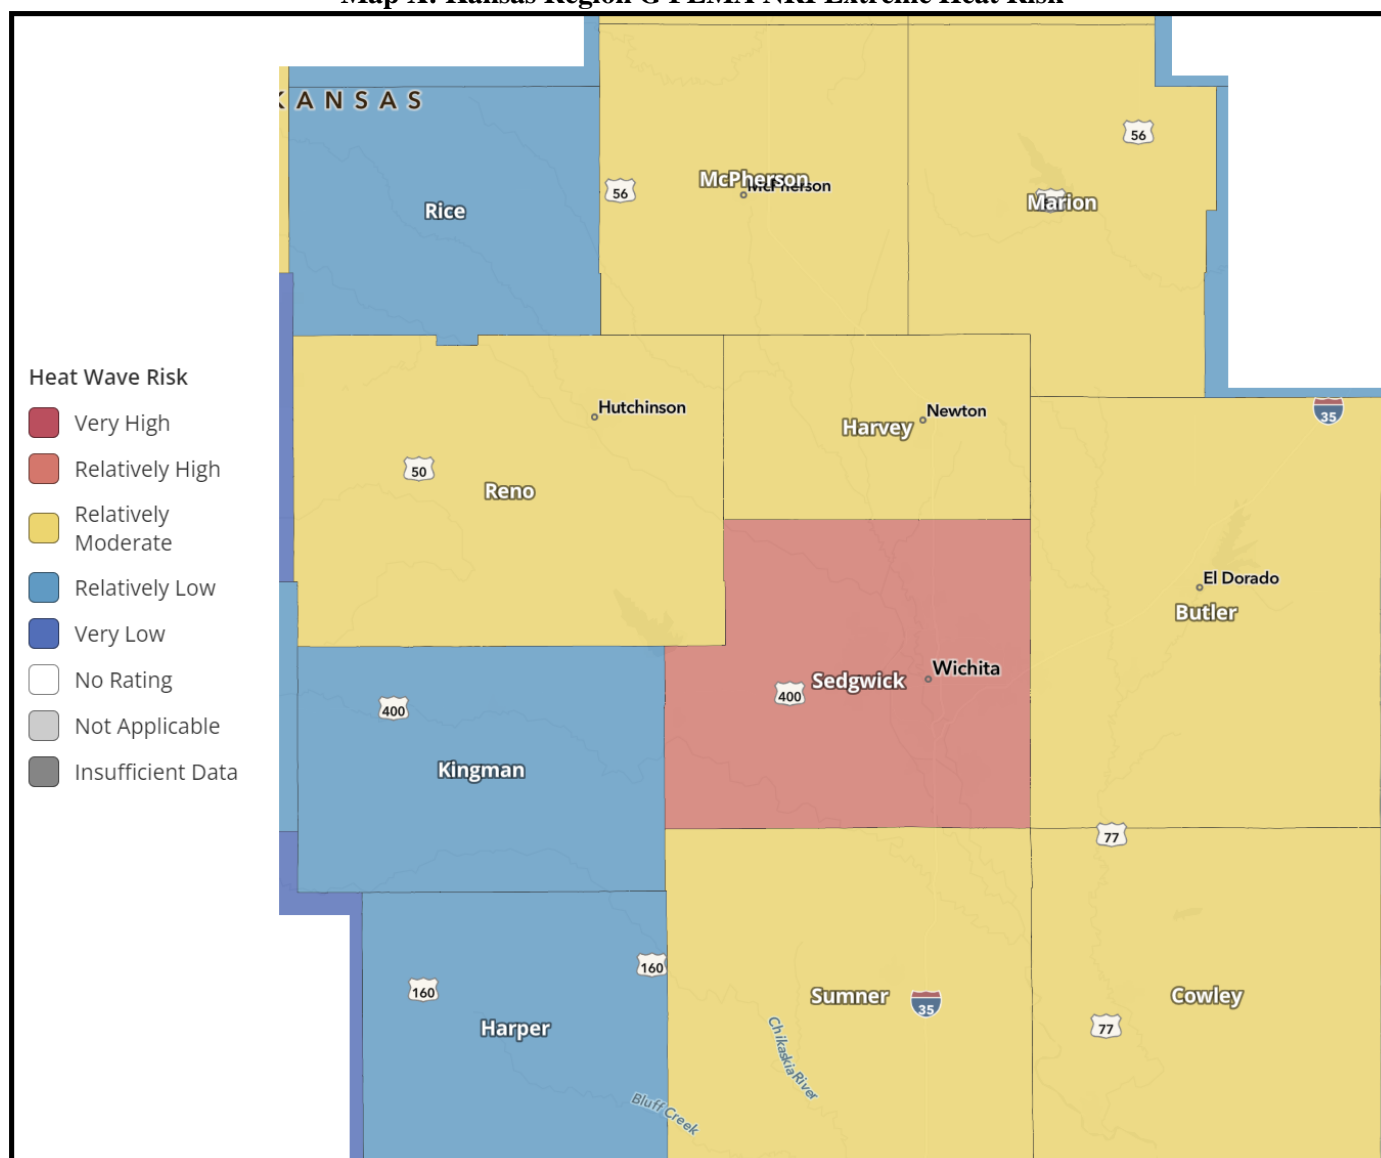

Extreme temperatures can pose various risks to local and county operations and facilities, and may include:

- **Health and Safety Risks:** High temperatures, especially during heatwaves, can pose significant health risks to government employees. Heat-related illnesses such as heat exhaustion and heatstroke can occur, potentially leading to hospitalizations or fatalities. Cold temperatures can also lead to cold-related illnesses and injuries, such as frostbite and hypothermia.
- **Power Grid Strain:** Extreme temperatures, whether hot or cold, can lead to increased demand for electricity. This can strain the power grid, potentially causing power outages, which can disrupt government operations, including the functioning of critical infrastructure such as hospitals, emergency services, and data centers.
- **Infrastructure Stress:** Buildings and infrastructure can suffer damage due to extreme temperatures. For example, prolonged exposure to high temperatures can lead to structural damage, such as cracking and warping. Extreme cold can freeze and damage pipes, leading to water leaks and flooding when temperatures rise.
- **Transportation Disruptions:** Extreme heat can cause pavement to soften and buckle, leading to road closures and transportation disruptions. Extreme cold can result in icy road conditions and reduce visibility, making travel hazardous.

- **Emergency Response:** Government agencies may need to respond to extreme weather events, such as providing emergency shelter during heatwaves or responding to weather-related accidents and emergencies. These responses can strain resources and personnel.
- **Budgetary Impact:** The costs associated with responding to and mitigating the effects of extreme temperatures can strain state budgets. This includes expenses related to emergency response, infrastructure repairs, and healthcare.

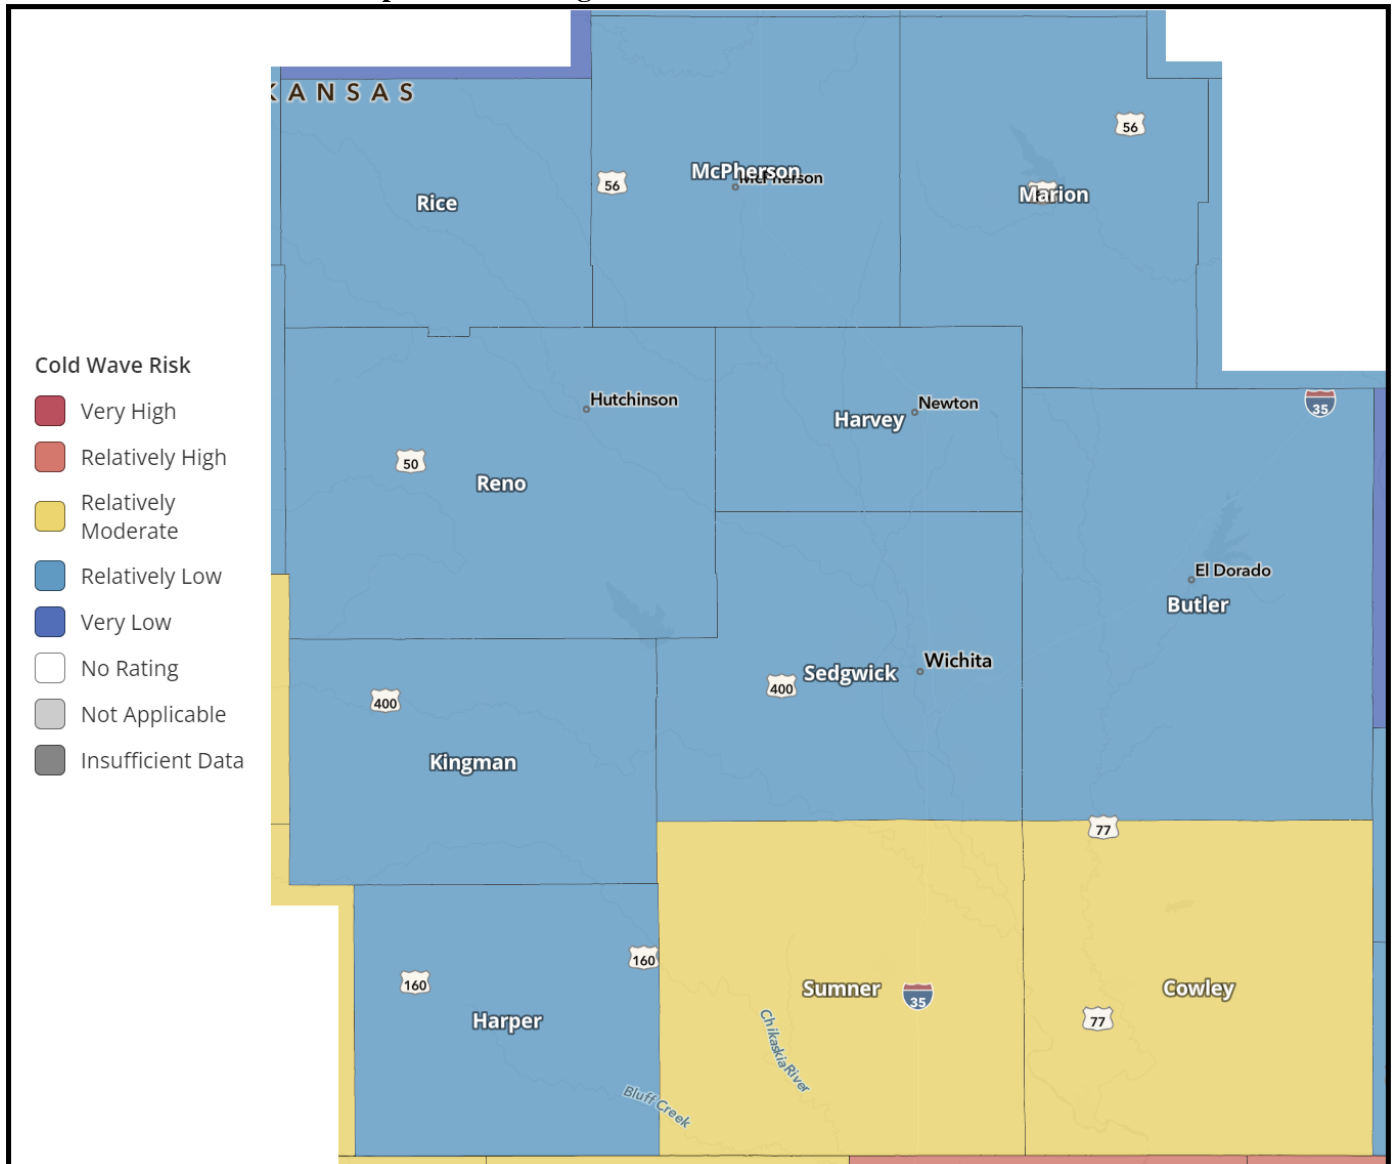

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating counties from extreme heat and extreme cold:

**Map X: Kansas Region G FEMA NRI Extreme Heat Risk**

Source: FEMA NRI

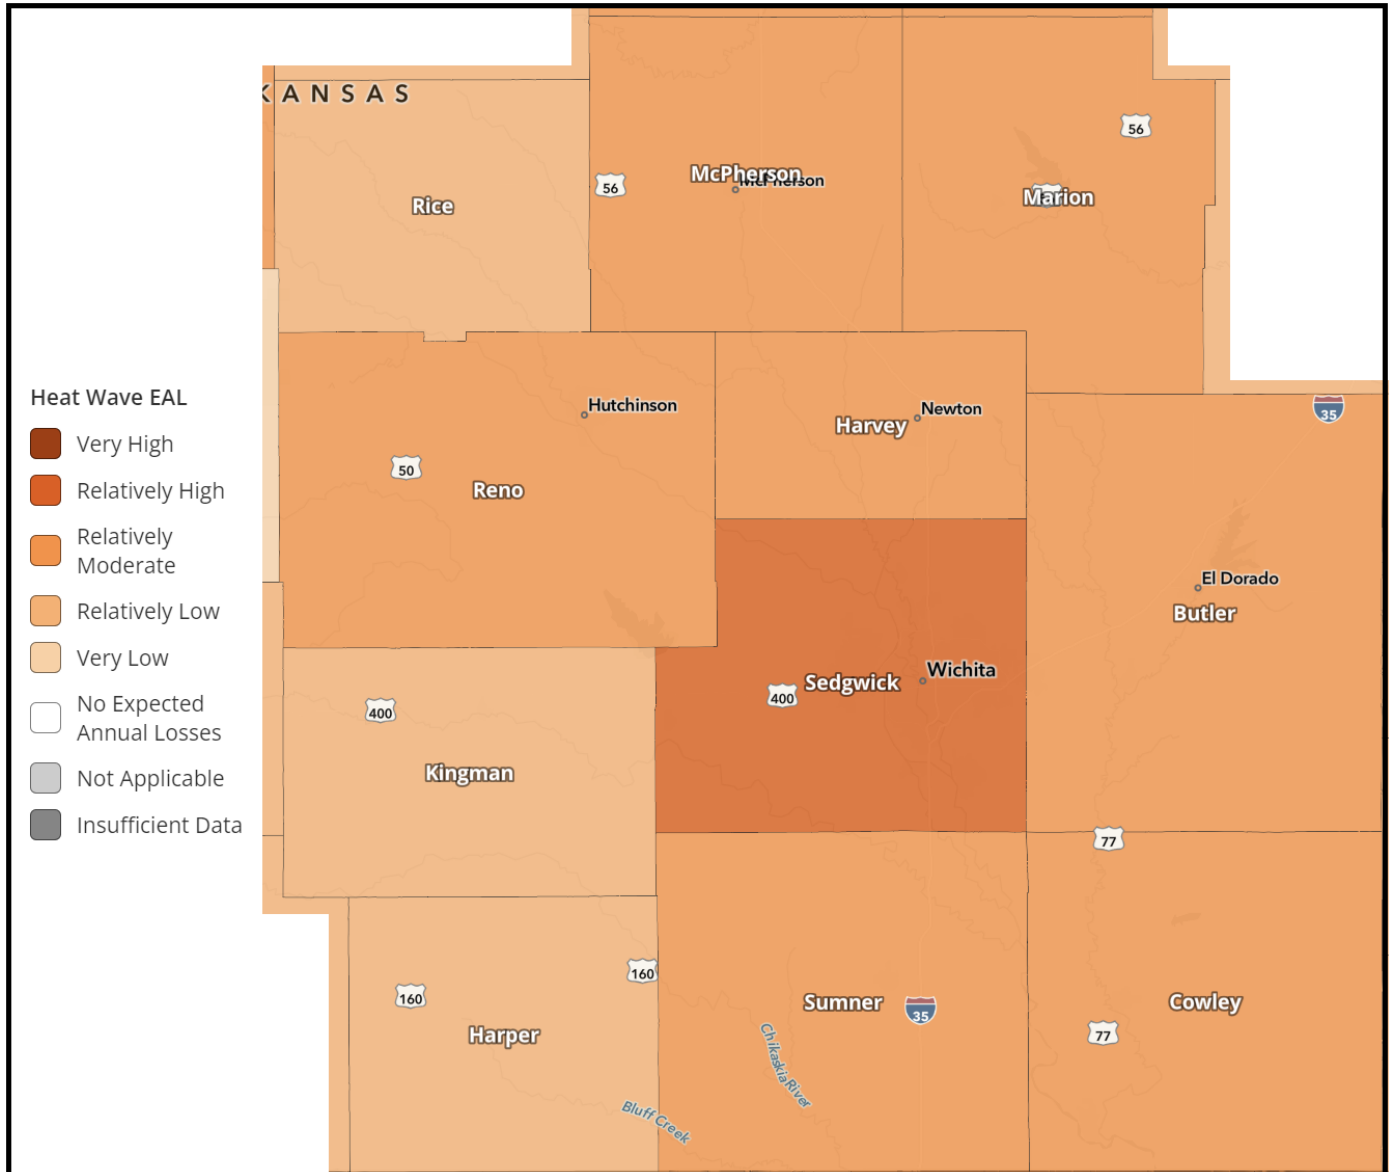

**Map X: Kansas Region G FEMA NRI Extreme Cold Risk**

Source: FEMA NRI

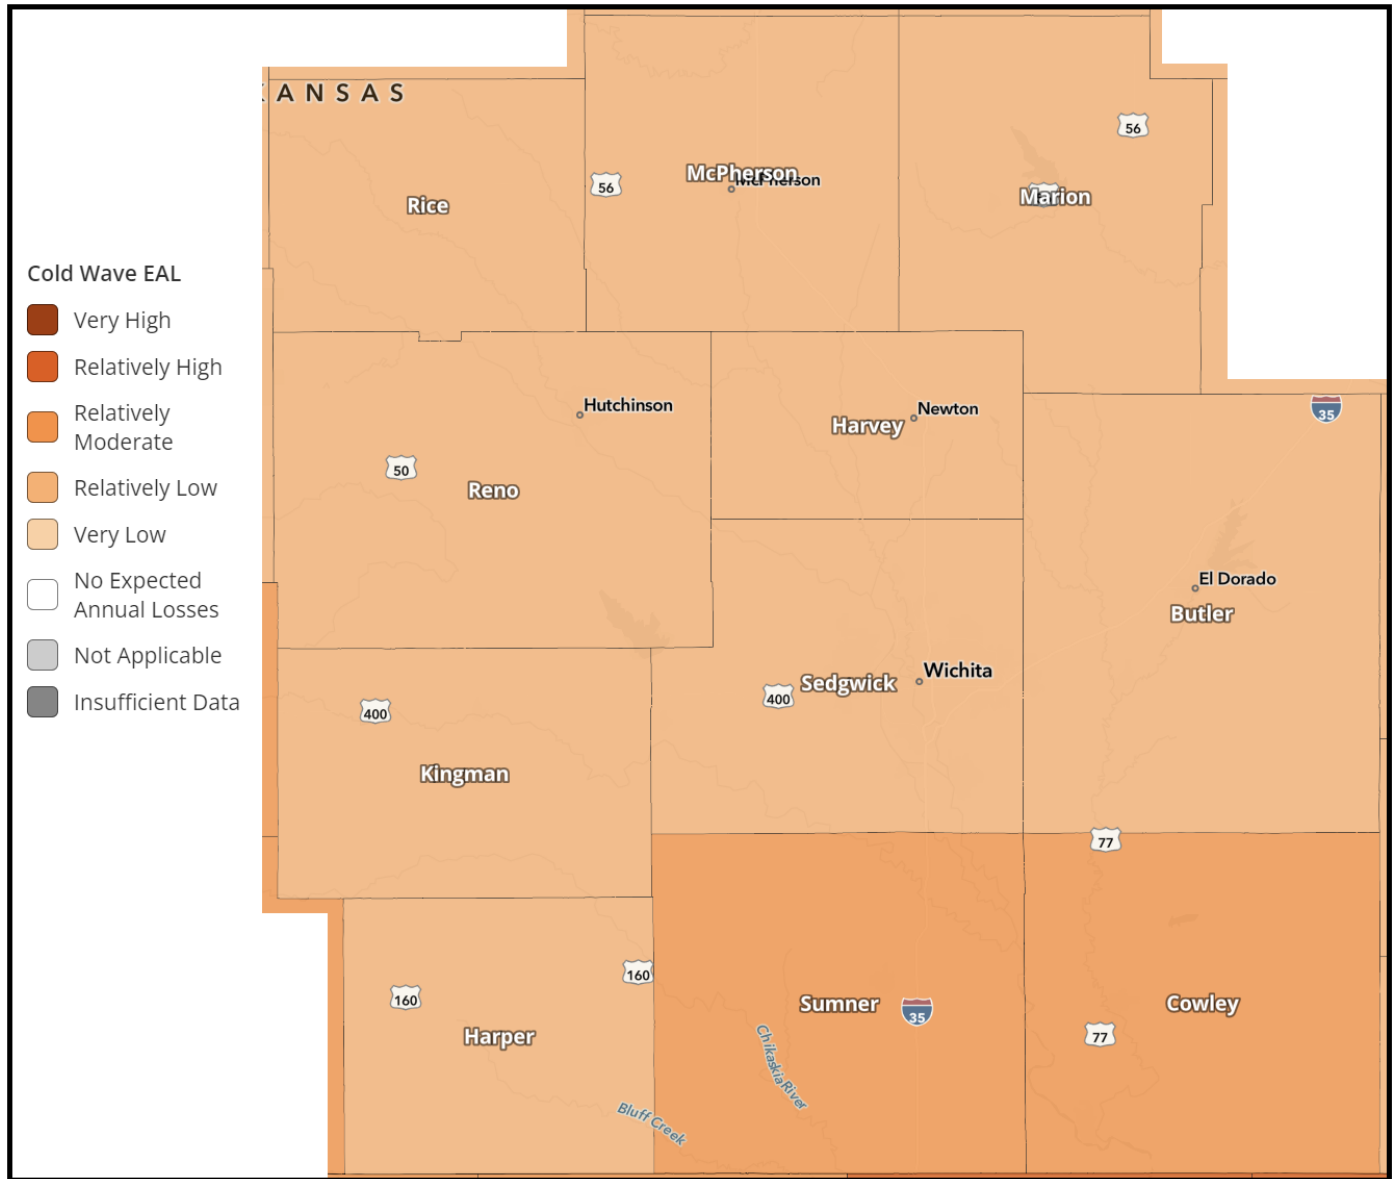

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for extreme heat and extreme cold for participating counties within Kansas Region G:

**Map X: Kansas Region G FEMA NRI Extreme Heat EAL**

Source: FEMA NRI

**Map X: Kansas Region G FEMA NRI Extreme Cold EAL**

Source: FEMA NRI

The following tables indicates the FEMA NRI and EAL analysis for each participating Kansas Region G county for extreme heat and extreme cold:

**Table X: Kansas Region G FEMA NRI and EAL for Extreme Heat by County**

County	Risk Index	EAL
Butler	Relatively Moderate	Relatively Moderate
Cowley	Relatively Moderate	Relatively Moderate
Harper	Relatively Low	Relatively Low
Harvey	Relatively Moderate	Relatively Moderate
Kingman	Relatively Low	Relatively Low
Marion	Relatively Moderate	Relatively Moderate
McPherson	Relatively Moderate	Relatively Moderate

**Consequence Analysis**

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Extreme Temperature Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	Extreme temperatures can have severe consequences for health, particularly for the elderly and young. Loss of electricity may impact heating or air conditioning leading to poorly tolerated indoor temperatures. Physical effects of extreme temperatures can cause major health problems and may lead to injury or death.
Impact on Responders	Without proper mitigation efforts, responders may be susceptible to temperature related illness. Extreme temperatures may also damage instruments or equipment necessary for response activities. First responders may face dangerous road conditions leading to accidents and prolonged response times.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. This hazard may impact an agency's ability to implement continuity operations due to power outages. If the activation of alternate facilities was required, continuity of operations may be difficult due to lack of computer/network access during power outages.

**Table x: Extreme Temperature Consequence Analysis**

<b>Subject</b>	<b>Potential Impacts</b>
Delivery of Services	Extreme temperatures can impact efficient delivery or inability of goods or services due to potential health impacts on workers. Equipment and vehicles may be damaged, and the delivery of services may be delayed due to poor travel conditions
Property, Facilities, and Infrastructure	Facility integrity is at risk with regards to power cables and stations being overused and limiting operations. This could lead to limits on facility heating or cooling.
Impact on Environment	Extreme temperatures can cause significant damage to the local environment and result in habitat loss, invasive species, and changes in migration. Extreme temperatures may severely decrease the yield of cash crops. Livestock are adversely affected by extreme temperatures and may suffer medical problems or death.
Economic Conditions	Extreme temperatures may drain local resources. Under some conditions, some of the costs can be recouped through federal grant reimbursements .
Public Confidence in Governance	Governmental response, on all levels, requires direct actions that must be immediate and effective to maintain public confidence.

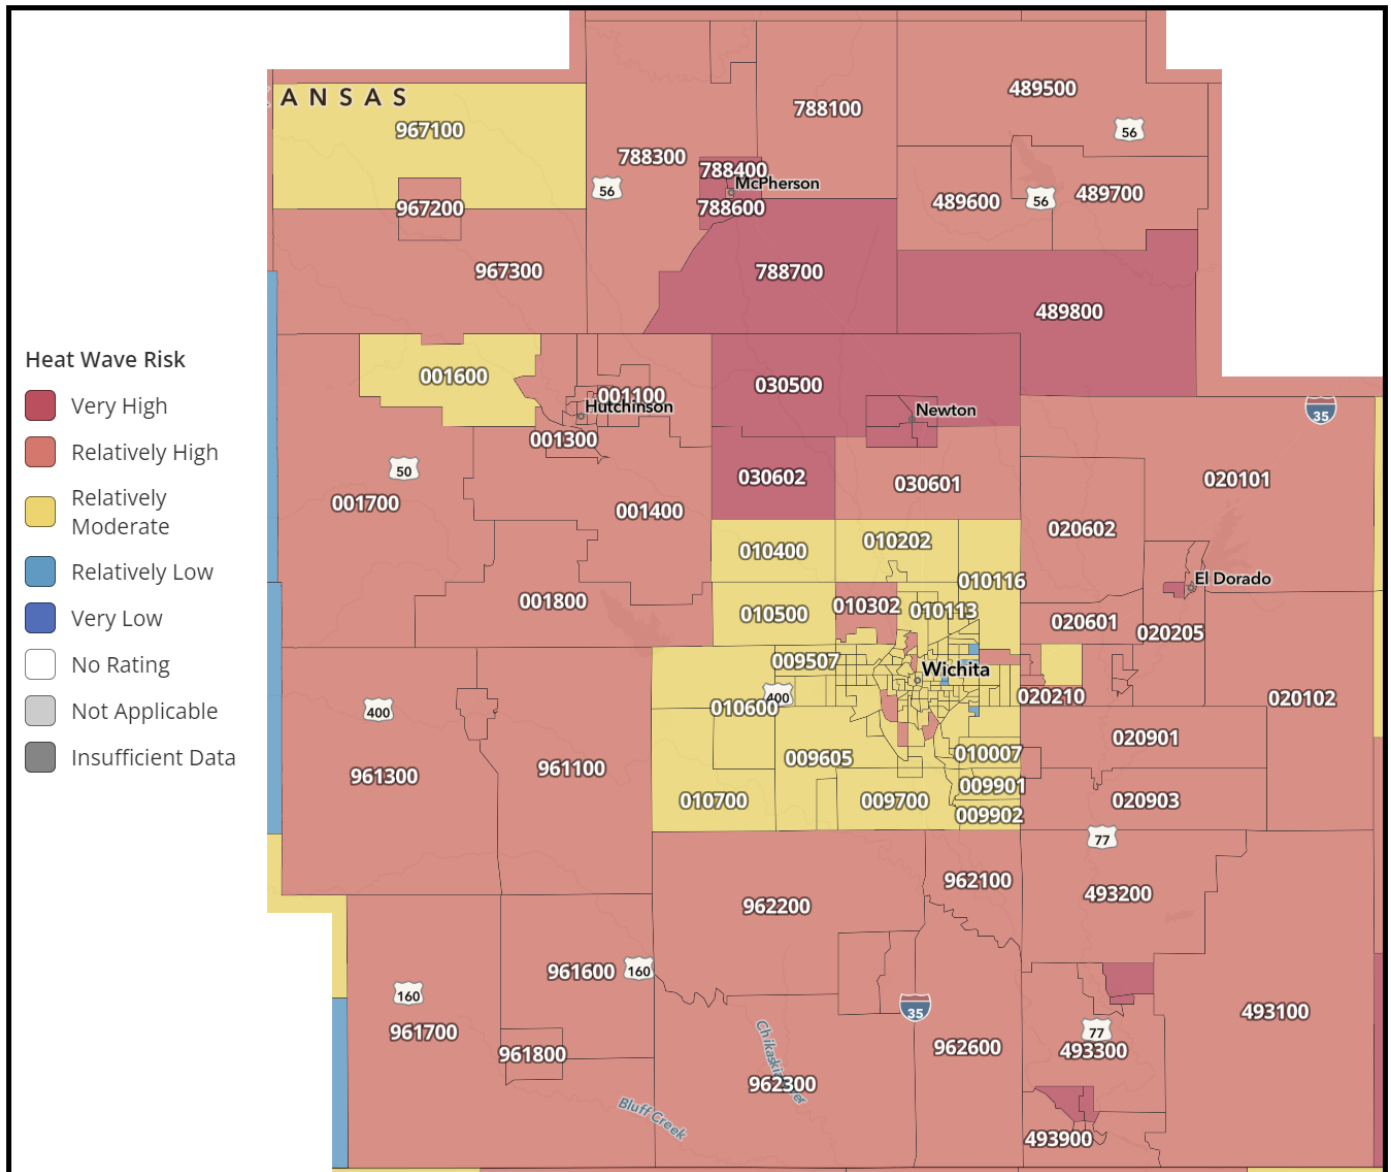

#### **4.12.7 Jurisdictional Risk and Vulnerability**

To help understand the risk and vulnerability to earthquakes of participating jurisdictions mapping from the FEMA NRI was run on a census tract level. As the NRI does not generate mapping for individual jurisdictions, census tract analysis is the closest analogue available to understand individual jurisdiction conditions.

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating jurisdictions (as indicated by census tract) from extreme heat and extreme cold events:

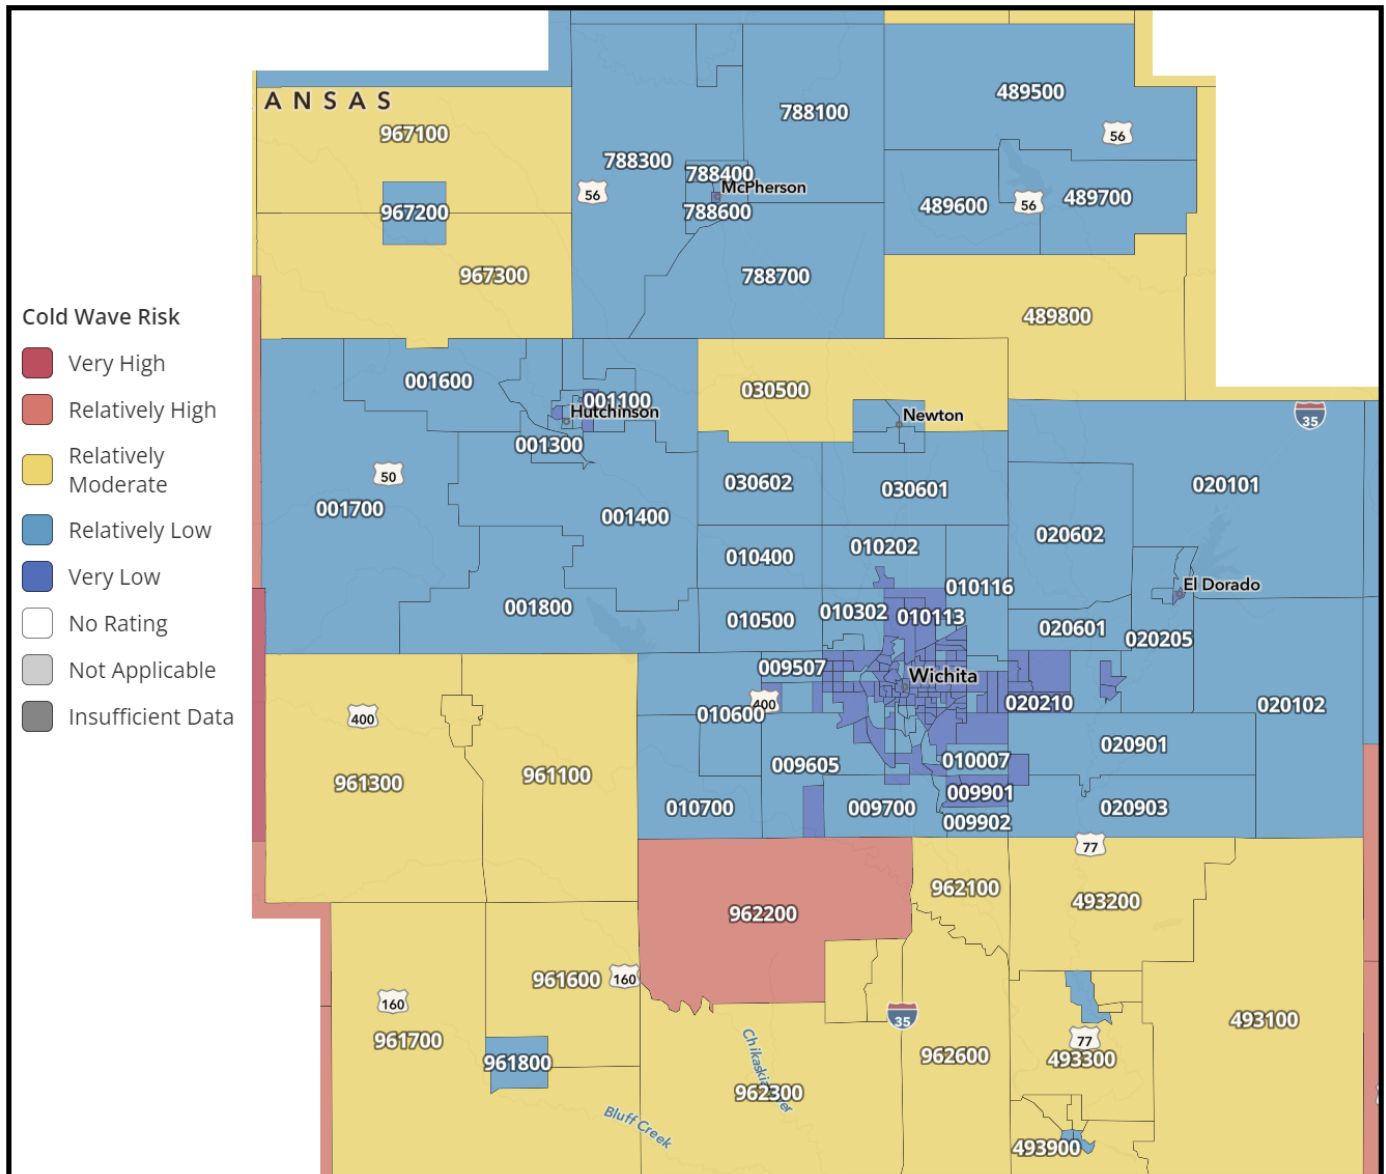

**Map X: FEMA NRI Jurisdictional Extreme Heat Risk**

Source: FEMA NRI

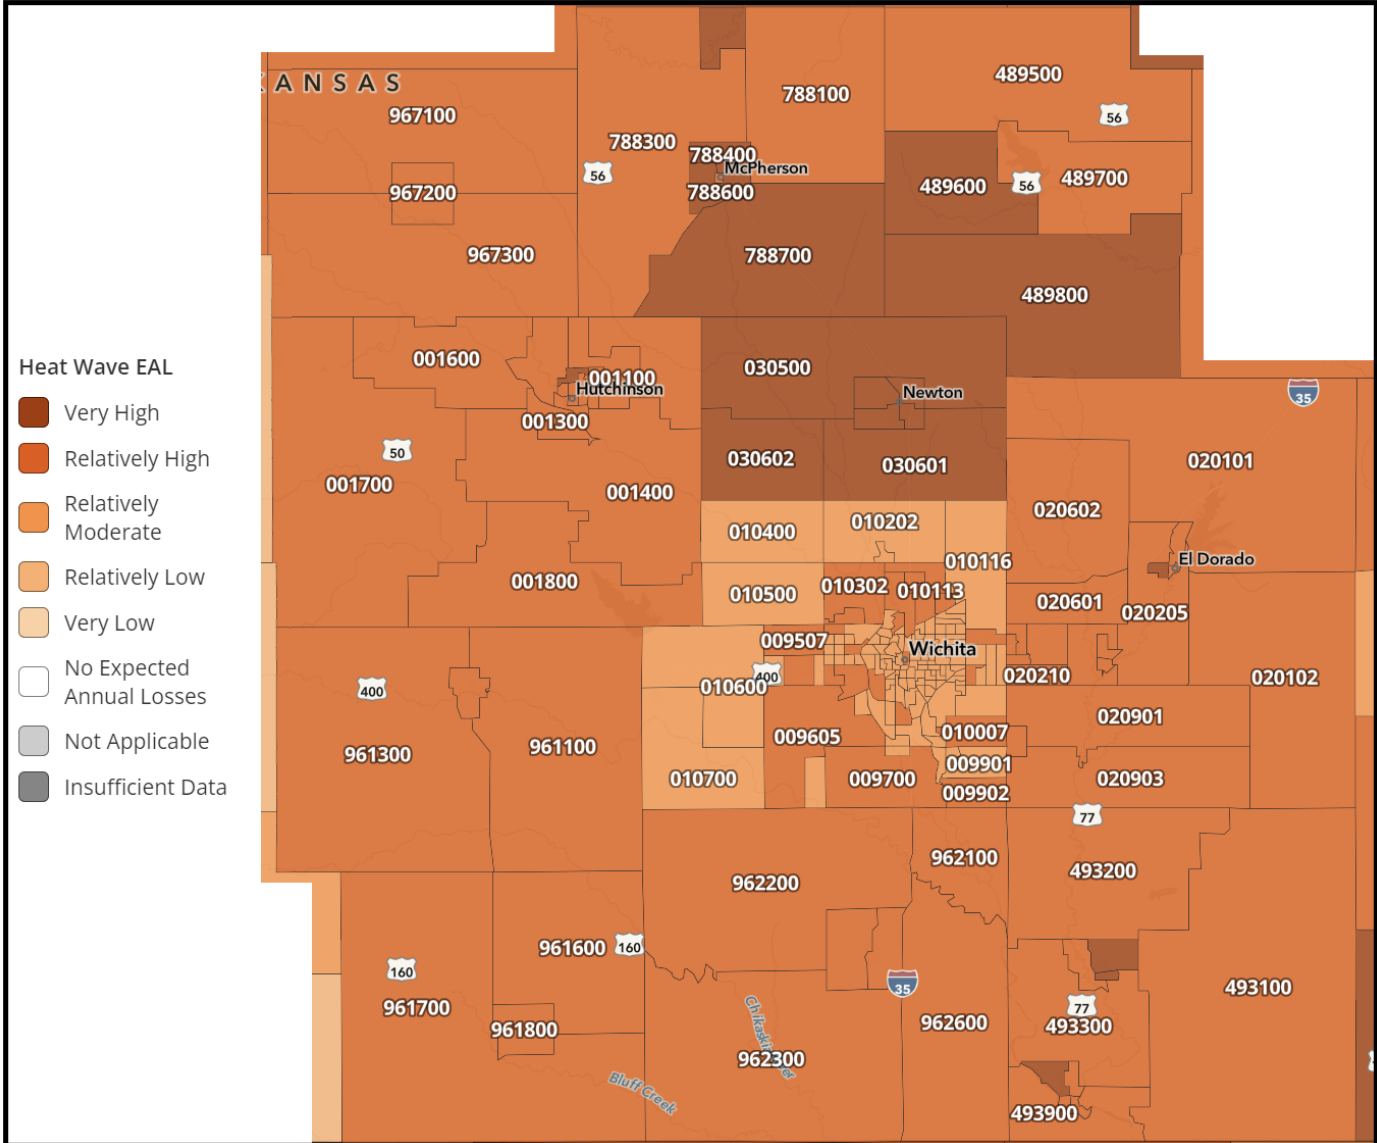

**Map X: FEMA NRI Jurisdictional Extreme Cold Risk**

Source: FEMA NRI

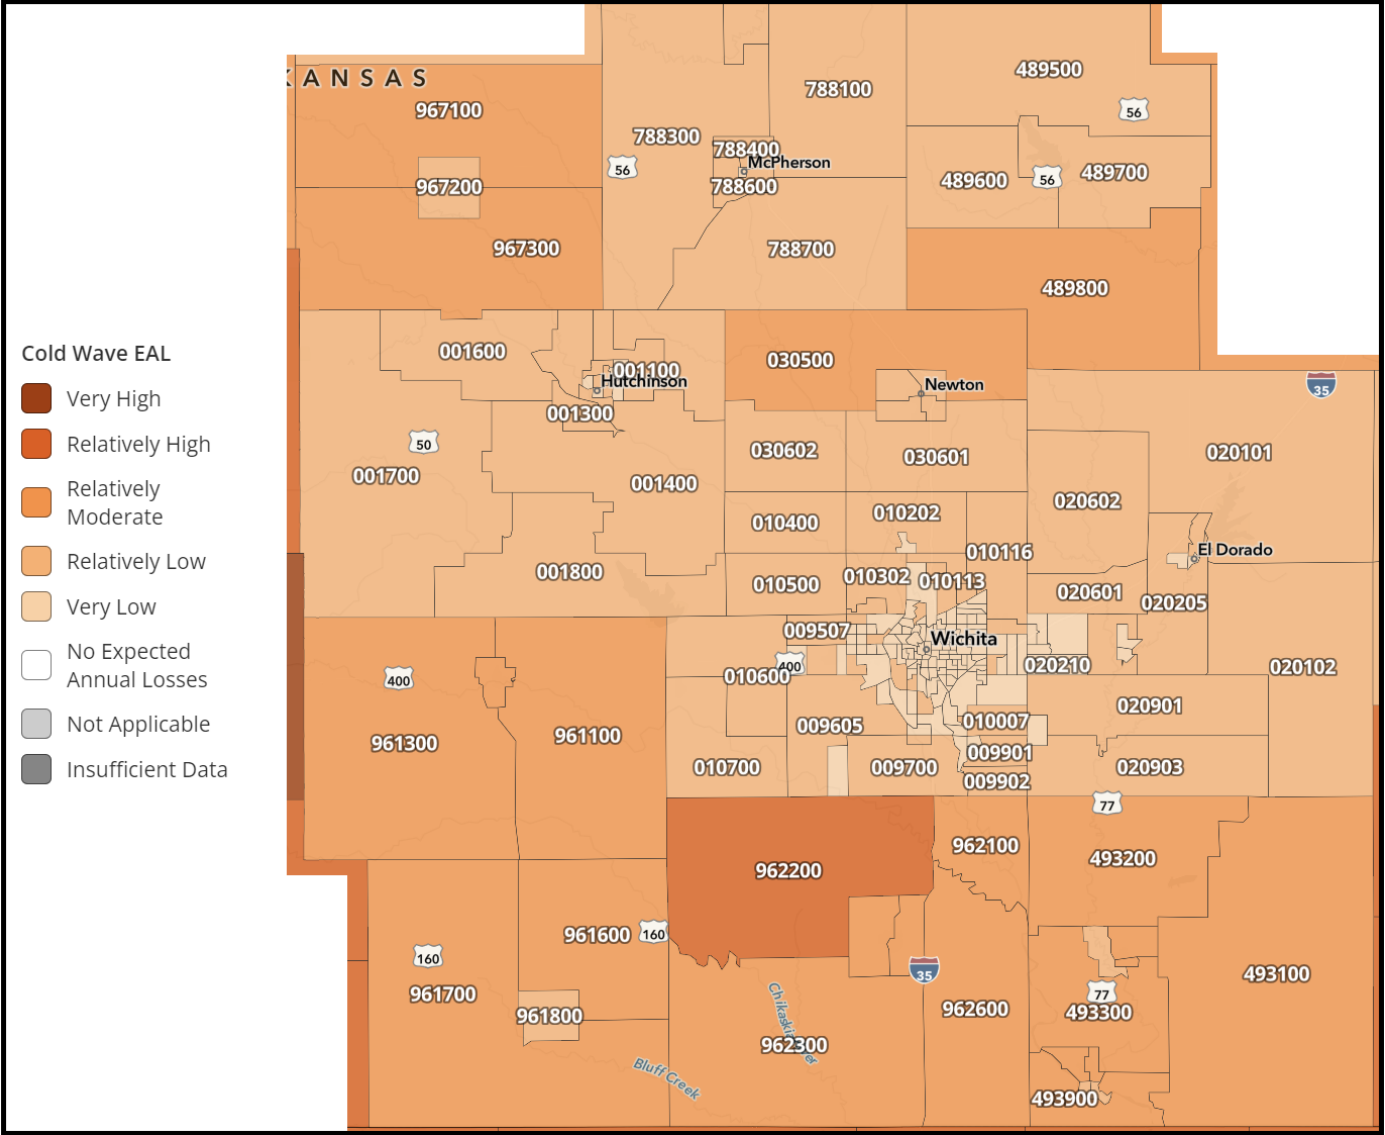

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for extreme heat and extreme cold for participating jurisdictions (as indicated by census tract) within Kansas Region G:

## Map X: FEMA NRI Jurisdictional Extreme Heat EAL

Source: FEMA NRI

Map X: FEMA NRI Jurisdictional Extreme Cold EAL

Source: FEMA NRI

## 4.13 Flood

### 4.13.1 Hazard Description

Flooding is the overflow or accumulation of water on normally dry land, often caused by heavy rainfall, snowmelt, or the failure of natural or artificial barriers. Flooding can lead to the inundation of homes, roads, farmland, and other areas, causing damage to property, disruption of daily life, and potential threats to human safety and the environment.

A floodplain is a flat or gently sloping area adjacent to a river, stream, or other water body. These areas act as a buffer during periods of heavy rainfall or snowmelt, absorbing excess water and preventing it from rushing downstream too quickly. In its common usage, a floodplain refers to areas inundated by the 100-year flood, the flood that has a 1% chance of being equaled or exceeded in any given year, and the 500-year flood, the flood that has a 0.2% chance of being equaled or exceeded in any given year. The 100-year flood is the national minimum standard to which communities regulate their floodplains through the NFIP.

*Photo Source: NOAA, Flooding*

### 4.13.2 Location and Extent

A variety of factors affect the severity of flooding within Kansas Region G. These include topography, weather characteristics, development, and geology. Intense flooding will create havoc in any jurisdiction affected.

#### Flash Flooding

Flash flooding occurs during heavy or extended periods of rain, generally when the ground is unable to rapidly absorb the water. Most flash flooding in Kansas Region G is caused by intense and stationary thunderstorms. Heavy sustained rain can create rapid flooding very quickly, and flooding can occur miles away from where the rain fell. Factors that can contribute to the severity of flash flooding include rainfall intensity, duration, drainage condition, and ground conditions (paved or unpaved). Flash floods are particularly dangerous to people and property, as six inches of moving water can knock a person down and two feet can lift a vehicle. As there is often little warning of a flash flood event, they are the cause of most flood fatalities.

#### Riverine Flooding

Riverine flooding refers to the overflow of water from a river or a stream onto adjacent land areas. This type of flooding occurs when the water level in a river or stream rises significantly and exceeds its banks, inundating the surrounding areas. The severity of riverine flooding can be influenced by the amount and intensity of rainfall in the watershed, the size, shape, and slope of the river or stream channel, and the presence of dams on the river system.

#### Urban Flooding

FEMA defines urban flooding as “the inundation of property in a built environment, particularly in more densely populated areas, caused by rain falling on increased amounts of impervious surfaces and overwhelming the capacity of drainage systems.” In Kansas Region G, urban flooding has consistently increased due to a number of factors, including the filling for development of natural wetlands and waterways, the reduction of permeable surfaces, and the aging and insufficient capacity of stormwater systems.

To establish floodplains, FEMA adopted the Base Flood Elevation (BFE), which is the computed elevation that floodwater is anticipated to rise during a flood that has a 1% chance of occurring in any given year. The BFE establishes the regulatory requirement for the elevation or floodproofing of structures, and the relationship between the BFE and a given structure’s elevation determines the flood insurance premium through the NFIP.

FEMA, through the Risk Mapping, Assessment, and Planning (Risk MAP) program, works with partners to assess and map these flood risks producing Flood Insurance Rate Maps (FIRMs). As an additional benefit, the FIRMs serve as the basis for NFIP regulations and flood insurance purchase requirements.

SFHAs are defined as the area that will be inundated by the flood event having a 1% chance of being equaled or exceeded in any given year. The 1% annual chance flood is also referred to as the base flood or 100-year flood. The FIRM depicts the SFHA, including the 1%-annual-chance flood. These areas are labeled on the map as zone, as explained in the following table:

The following table details FEMA’s FIRM flood zone classifications.

**Table X: Flood Zone Classifications**

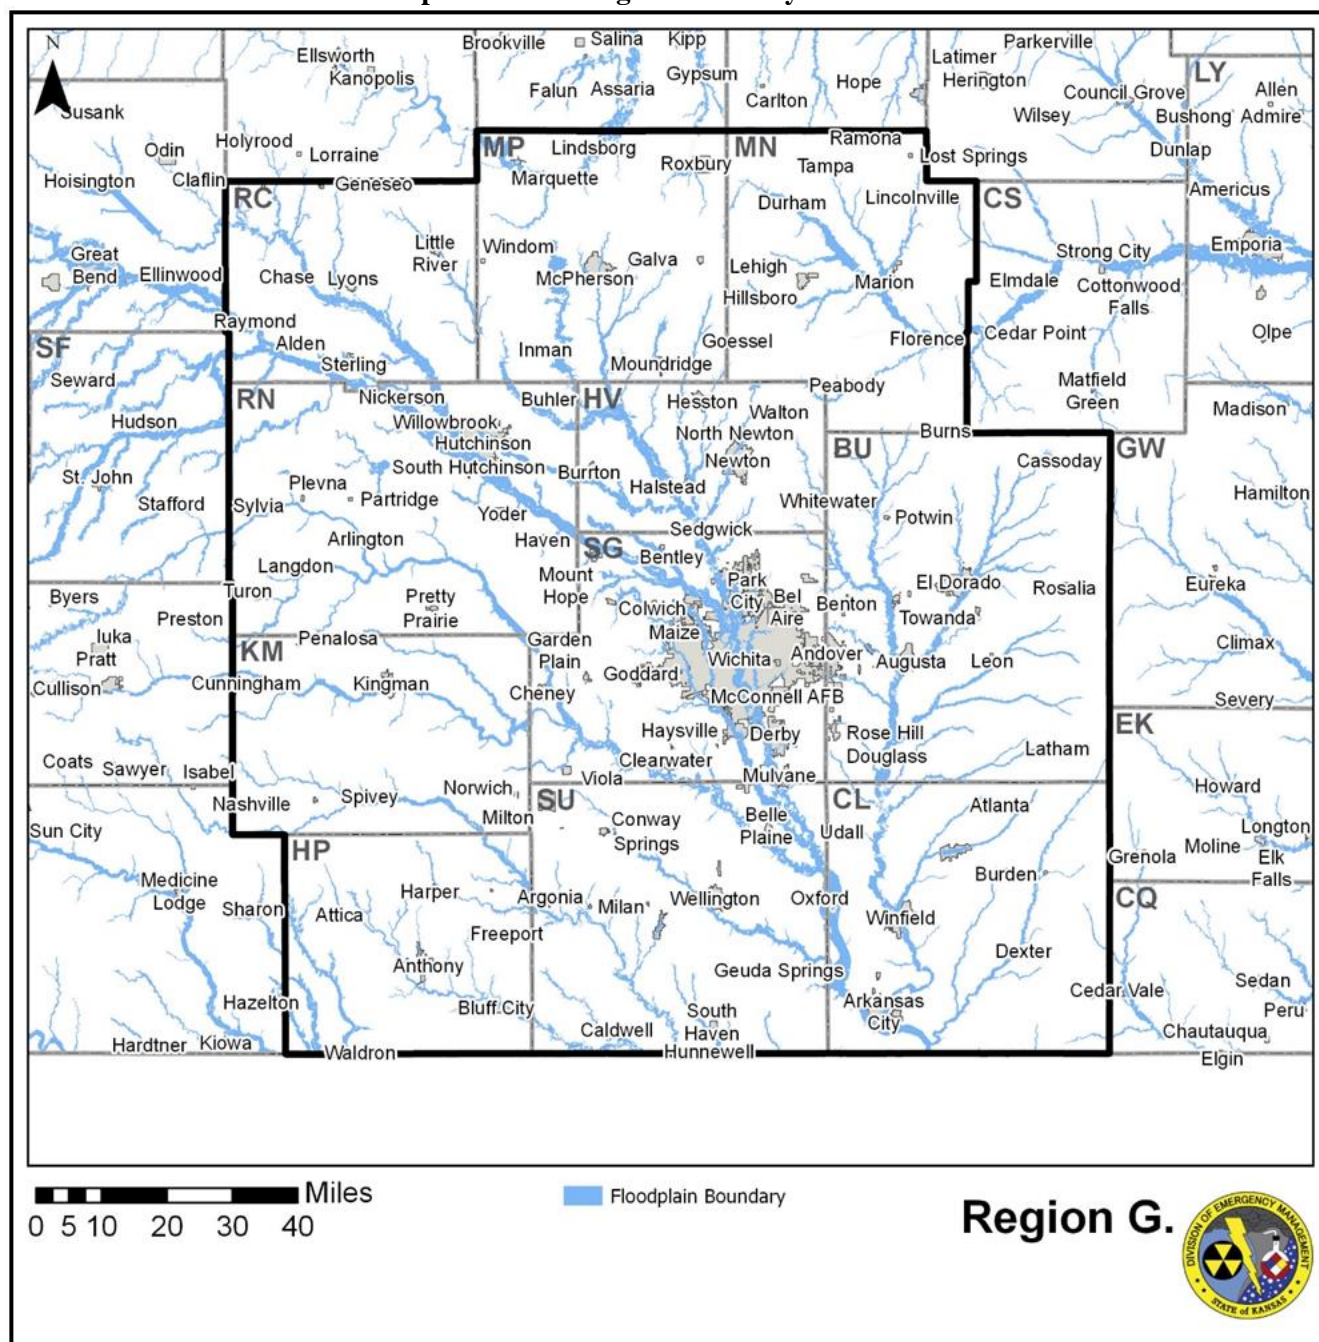

<b>Zone</b>	<b>Description</b>
A	The 1%-annual-chance or base floodplain. There are six (6) types of A Zones.
AE	The base floodplain where base flood elevations are provided.
AH	Shallow flooding base floodplain. BFEs are provided.
AO	The base floodplain with sheet flow, ponding, or shallow flooding. Base flood depths (feet above ground) are provided.
AR	The base floodplain that results from the decertification of a previously accredited flood protection system that is in the process of being restored to provide a 1%-annual-chance or greater level of flood protection.
A99	Area to be protected from base flood by levees or Federal Flood Protection Systems under construction. BFEs are not determined.
B or Shaded X	Areas between the limits of the base flood and the 0.2% annual-chance (or 500-year) flood.
C or Unshaded X	Areas of minimal flood hazard, which are the areas outside the SFHA and higher than the elevation of the 0.2% annual-chance flood

Source: FEMA

The following maps use FEMA FIRM data to depict the location of identified flood zones within Kansas Region G.

**Map X: Kansas Region G County Flood Zones**

Source: FEMA

#### 4.13.3 Previous Occurrences

Historical events of significant magnitude or impact can result in a Presidential Disaster Declaration. Kansas Region G has experienced two Presidential Disaster Declarations related to flooding in the five-year period since the previous HMP, reflected in the following table.

**Table X: State of Kansas Region G Presidentially Declared Disasters, Flood**

Designation	Declaration Date	Incident Type	Counties	Assistance
DR-4499-KS	08/14/2019	Severe Storms, Straight-Line Winds, Flooding, Tornadoes, Landslides, and Mudslides	Butler, Cowley, Harper, Harvey, Kingman, Marion, McPherson, Reno, Rice, and Sumner	\$51,157,548
DR-4417-KS	03/20/2019	Severe Storms, Straight-Line Winds, and Flooding	Cowley, Kingman, Reno, and Sumner	\$3,509,374

Source: FEMA

Note: -: Data unavailable

In addition to the Presidentially Declared Disasters, the following table presents NCEI identified flood events in Kansas from 2009 to 2023:

**Table X: Kansas Region G NCEI Flood Events, 2009 - 2023**

County	Event Type	Number of Days with Events	Property Damage	Deaths and Injuries
Butler	Flood	31	\$12,700	1
	Flash Flood	17	\$1,111,000	1
Cowley	Flood	11	\$207,700	0
	Flash Flood	9	\$30,400	0
Harper	Flood	8	\$2,200	0
	Flash Flood	5	\$5,000,000	1
Harvey	Flood	14	\$1,700	0
	Flash Flood	8	\$5,100	0
Kingman	Flood	11	\$101,100	0
	Flash Flood	2	\$100,000	0
Marion	Flood	15	\$70,200	0
	Flash Flood	12	\$340,600	0
McPherson	Flood	29	\$10,100	0
	Flash Flood	6	\$15,500	0
Reno	Flood	21	\$506,200	0
	Flash Flood	5	\$1,730,000	0
Rice	Flood	17	\$326,500	0
	Flash Flood	5	\$202,200	0
Sedgwick	Flood	48	\$94,500	0
	Flash Flood	28	\$2,188,000	0
Sumner	Flood	19	\$215,100	0
	Flash Flood	8	\$2,346,000	0

Source: NCEI

It is worth noting that damage estimates indicated by the NCEI are often artificially low. This underreporting is a result of the way the events are reported to the NCEI, often by the local and/or NWS office. When reporting an event oftentimes the NWS office does not have access to the actual damage assessment resulting from that event. As such, the report often details a very low amount or zero-dollar amount for damages.

The Secretary of Agriculture is authorized to designate counties as disaster areas to make emergency loans available to producers suffering losses in those counties and in counties that are contiguous to a designated county. USDA Secretarial disaster designations must be requested of the Secretary of Agriculture by a governor or the governor's authorized representative, and there is an expedited process for drought. The following table represents the total number of Secretarial Disaster Declarations, by county, for the Kansas Region G:

**Table X: Secretarial Flood Disaster Declarations, 2019 -2023**

County	2022	2021	2020	2019
Butler	0	0	0	1
Cowley	0	0	0	1
Harper	0	0	0	0
Harvey	0	0	0	0
Kingman	0	0	0	0
Marion	0	0	0	1
McPherson	0	0	0	0
Reno	0	0	0	0
Rice	0	0	0	1
Sedgwick	0	0	0	1
Sumner	0	0	0	1

Source: USDA Farm Service Agency

#### 4.13.4 Probability of Future Incidents

Based on historical occurrences, Kansas Region G will continue to experience flood events on an annual basis. The definition of each flood zone's classification is used for the purpose of calculating the yearly probability of a riverine flood. Jurisdictions with property in a 100-year floodplain can expect a 1% annual chance of flooding within the designated areas. Jurisdictions with property in a 500-year floodplain can expect a 0.2% annual chance of flooding within the designated areas. FEMA FIRMs can be consulted to provide assistance in determining flooding probability for jurisdictions within Kansas Region G.

The following tables, using data from the NCEI, indicate the yearly probability of a flood or flash flood event, the number of deaths or injuries, and estimated property damage for each county in Kansas Region G.

**Table X: Kansas Region G NCEI Flood Event Probability Summary**

County	Days with Event	Average Events per Year	Deaths / Injuries	Average Deaths / Injuries per Year	Property Damage	Average Property Damage per Year
Butler	31	2	1	<1	\$12,700	\$847
Cowley	11	1	0	0	\$207,700	\$13,847
Harper	8	1	0	0	\$2,200	\$147
Harvey	14	1	0	0	\$1,700	\$113
Kingman	11	1	0	0	\$101,100	\$6,740
Marion	15	1	0	0	\$70,200	\$4,680
McPherson	29	2	0	0	\$10,100	\$673
Reno	21	1	0	0	\$506,200	\$33,747
Rice	17	1	0	0	\$326,500	\$21,767
Sedgwick	48	3	0	0	\$94,500	\$6,300
Sumner	19	1	0	0	\$215,100	\$14,340

Source: NCEI

**Table X: Kansas Region G NCEI Flash Flood Event Probability Summary**

County	Days with Event	Average Events per Year	Deaths / Injuries	Average Deaths / Injuries per Year	Property Damage	Average Property Damage per Year
Butler	17	1	1	<1	\$1,111,000	\$74,067
Cowley	9	1	0	0	\$30,400	\$2,027
Harper	5	0	1	<1	\$5,000,000	\$333,333
Harvey	8	1	0	0	\$5,100	\$340

**Table X: Kansas Region G NCEI Flash Flood Event Probability Summary**

County	Days with Event	Average Events per Year	Deaths / Injuries	Average Deaths / Injuries per Year	Property Damage	Average Property Damage per Year
Kingman	2	0	0	0	\$100,000	\$6,667
Marion	12	1	0	0	\$340,600	\$22,707
McPherson	6	0	0	0	\$15,500	\$1,033
Reno	5	0	0	0	\$1,730,000	\$115,333
Rice	5	0	0	0	\$202,200	\$13,480
Sedgwick	28	2	0	0	\$2,188,000	\$145,867
Sumner	8	1	0	0	\$2,346,000	\$156,400

Source: NCEI

#### 4.13.5 Projected Changes in Location, Intensity, Frequency, and Duration

The location, intensity, frequency, and duration of flooding are influenced by a combination of natural and human-induced factors.

Continued urbanization, deforestation, and changes in land use can alter natural drainage patterns. The conversion of natural landscapes to impervious surfaces, such as roads and buildings, reduces the ability of the land to absorb water, leading to increased runoff and the potential for urban flooding. Alterations to river channels, including channelization and dam construction, can influence the flow of water. Modifications may lead to changes in river behavior, affecting the potential for both upstream and downstream flooding. Poorly planned infrastructure, inadequate stormwater management, and the lack of effective drainage systems in urban areas can contribute to localized flooding. The increase in impervious surfaces reduces natural infiltration, leading to more runoff during rainfall events.

Potentially impacting the future of flood events, the NOAA NCEI State Climate Summary 2022 for Kansas indicates:

- Precipitation is highly variable from year to year.
- The majority of precipitation falls during the warm-season months.
- Throughout the period of record (1895–2020), total annual precipitation has generally been above average since 1985.
- The wettest consecutive 5-year interval was 2015–2019.
- The frequency of extreme precipitation events has been highly variable but shows a general increase.
- The number of 2-inch precipitation events was well above average during the 2015–2020 period.
- The increase in extreme precipitation events has been more pronounced in the eastern part of the state.

The flowing charts detail the annual precipitation and extreme precipitation events for Kansas Region G:

**Chart X: Kansas Total Annual Precipitation**

Source: NOAA NCEI Summary 2022 for Kansas

Additionally, the NOAA NCEI State Climate Summary 2022 for Kansas suggests that the number of extreme precipitation events are projected to increase. These extreme events will likely increase the incidence of flooding within Kansas Region G.

**Chart X: Kansas Region G Number of Extreme Precipitation Events (Greater Than 2 Inches)**

Source: NOAA NCEI State Climate Summary 2022 for Kansas

#### 4.13.6 Vulnerability and Impact

The results of the Hazus analysis were utilized to estimate potential losses for flooding. The intent of this analysis was to enable Kansas Region G to estimate where flood losses could occur and the degree of severity using a consistent methodology. The Hazus model helps quantify risk along known flood-hazard corridors as well as lesser streams and rivers that have a drainage area of ten square miles or more.

Hazus determines the displaced population based on the inundation area, not necessarily impacted buildings. As a result, there may be a population vulnerable to displacement even if the structure is not vulnerable to damage. Individuals and households will be displaced from their homes even when the home has suffered little or no damage either because they were evacuated or there was no physical access to the property because of flooded roadways.

Flood sheltering needs are based on the displaced population, not the damage level of the structure. Hazus determines the number of individuals likely to use government-provided short-term shelters through determining the number of displaced households as a result of the flooding. To determine how many of those households and the corresponding number of individuals will seek shelter in government-provided shelters, the number is modified by factors accounting for income and age. Displaced people using shelters will most likely be individuals with lower incomes and those who do not have family or friends within the immediate area. Since the income and age factors are taken into account, the proportion of displaced population and those seeking shelter will vary from county to county.

Additionally, Hazus takes into account flood depth when modeling damage (based on FEMA’s depth-damage functions). Generated reports capture damage by occupancy class (in terms of square footage impacted) by damage percent classes. Occupancy classes include agriculture, commercial, education, government, industrial, religion, and residential. Damage percent classes are grouped by 10% increments up to 50%. Buildings that sustain more than 50% damage are considered to be substantially damaged.

The Hazus analysis also provides an estimate of the repair costs for impacted buildings as well as the associated loss of building contents and business inventory. Building damage can also cause additional losses to a community by restricting a building’s ability to function properly. Income loss data accounts for losses such as business interruption and rental income losses as well as the resources associated with damage repair and job and housing losses. These losses are calculated by Hazus using a methodology based on the building damage estimates.

The damaged building counts generated by Hazus are susceptible to rounding errors and are likely the weakest output of the model due to the use of census blocks for analysis. Generated reports include this disclaimer: “Unlike the earthquake and hurricane models, the flood model performs its analysis at the census block level. This means that the analysis starts with a small number of buildings within each census block and applies a series of distributions necessary for analyzing the potential damage. The application of these distributions and the small number of buildings make the flood model more sensitive to rounding errors that introduces uncertainty into the building count results.” Additionally, losses are not calculated for individual buildings, but instead are based on the performances of entire classes of buildings obtained from the general building stock data. In the flood model, the number of grid cells (pixels) at each flood depth value is divided by the total number of grid cells in the census block. The result is used to weight the flood depths applied to each specific occupancy type in the general building stock. First floor heights are then applied to determine the damage depths to analyze damages and losses.

The following table provides the HAZUS results for displaced households, damaged buildings, destroyed buildings, and total economic loss for Kanas Region G:

**Table X: Kansas Region G Hazus Flood Scenario Displaced Population Building Damages**

County	Displaced Households	Damaged Buildings	Destroyed Buildings	Total Economic Loss
Butler	789	178	4	\$162,260,000
Cowley	368	60	1	\$67,260,000
Harper	19	3	0	\$2,080,000

**Table X: Kansas Region G Hazus Flood Scenario Displaced Population Building Damages**

<b>County</b>	<b>Displaced Households</b>	<b>Damaged Buildings</b>	<b>Destroyed Buildings</b>	<b>Total Economic Loss</b>
Harvey	578	134	10	\$105,710,000
Kingman	58	5	5	\$17,990,000
Marion	275	90	0	\$90,670,000
McPherson	333	55	1	\$59,810,000
Reno	3,435	786	0	\$447,070,000
Rice	107	8	0	\$20,290,00
Sedgwick	21,606	12,620	440	\$4,224,470,000
Sumner	301	62	0	\$33,690,000

Source: FEMA Hazus

Especially critical is timely evacuation orders, and adherence to those orders. If evacuation is not heeded, or flood waters rise quickly enough, citizens could drown or become trapped for extended periods of time with no access to services or medical care. Of special concern are long term care and medical facilities where it can take longer to evacuate, or evacuation may be impossible. Additionally, lower income citizens may not have the means to relocate, whether it be lack of transportation or lack of resources to afford temporary shelter. Expected impacts of flooding on citizens may include:

- **Loss of Life:** Flooding is one of the leading causes of weather-related fatalities worldwide. Fast-rising floodwaters can lead to drowning and other water-related accidents, resulting in the tragic loss of lives.
- **Injuries:** Floods can cause injuries due to waterborne diseases, contaminated floodwaters, debris, and accidents during evacuation or rescue operations.
- **Displacement:** Many people may be forced to evacuate their homes during floods and will require emergency shelter or temporary housing. Prolonged displacement can be emotionally and economically challenging.
- **Health Risks:** Floodwaters often contain pollutants, sewage, and hazardous materials. Exposure to contaminated water can lead to waterborne diseases, infections, and other health risks.
- **Mental Health Effects:** Survivors of floods may experience a range of emotional and psychological challenges, including post-traumatic stress disorder, anxiety, depression, and grief.
- **Food and Water Shortages:** Floods can contaminate water supplies and disrupt the distribution of food. This can lead to shortages of clean drinking water and essential food items.
- **Impact on Vulnerable Populations:** Vulnerable populations, including the elderly, children, people with disabilities, and those living in poverty, are often disproportionately affected by floods due to limited resources and mobility challenges.
- **Long-Term Consequences:** Some flood impacts, such as mold growth, structural damage, and land degradation, can have long-term consequences that persist even after the floodwaters recede.

Especially critical is timely evacuation orders, and adherence to those orders. - **Long-Term Consequences:** Some flood impacts, such as mold growth, structural damage, and land degradation, can have long-term consequences that persist even after the floodwaters recede.

Floods can have significant and often costly impacts on facilities and critical infrastructure. These impacts can disrupt essential services, damage infrastructure, and pose safety risks. The extent of the impact depends on factors such as the severity of the flood, the preparedness of the infrastructure, and the effectiveness of flood management measures. Here are some of the common impacts of floods on facilities and critical infrastructure:

- **Structural Damage:** Floodwaters can cause extensive damage to buildings, including critical infrastructure such as power plants, water treatment facilities, hospitals, and transportation hubs. The force of moving water can weaken foundations, erode structural elements, and compromise the integrity of buildings.
- **Electrical and Mechanical Systems:** Floodwaters can damage electrical systems, including transformers, switchgear, and electrical panels, leading to power outages and the disruption of critical services. Mechanical systems, such as heating, ventilation, and air conditioning, may also be affected.
- **Water and Wastewater Infrastructure:** Floods can overwhelm water supply and wastewater treatment systems. Contamination of drinking water sources can lead to water shortages and health risks, while damage to wastewater treatment plants can result in the discharge of untreated sewage into water bodies.
- **Transportation Networks:** Floods can damage roads, bridges, railways, and airports, making transportation difficult or impossible.
- **Communication Infrastructure:** Floods can disrupt telecommunications and internet services, hindering communication among emergency responders and the public. Loss of communication can impede coordination and response efforts.
- **Healthcare Facilities:** Damage to healthcare infrastructure can limit the capacity to provide medical care during a crisis.
- **Energy Infrastructure:** Floods can damage power generation facilities, including hydroelectric dams and power plants, leading to power outages and potential safety hazards.

The Hazus model indicated that the following number of critical facilities are estimated to be damaged or suffer loss of use from the flood scenario.

**Table X: Kansas Region G Hazus Flood Scenario Number of Critical Facilities Damaged or Impacted**

County	Emergency Operations Centers	Fire Stations	Hospitals	Police Stations	Schools
Butler	0	1	0	0	0
Cowley	0	0	0	0	0
Harper	0	0	0	0	0
Harvey	0	0	0	0	0
Kingman	0	0	0	0	0

**Table X: Kansas Region G Hazus Flood Scenario Number of Critical Facilities Damaged or Impacted**

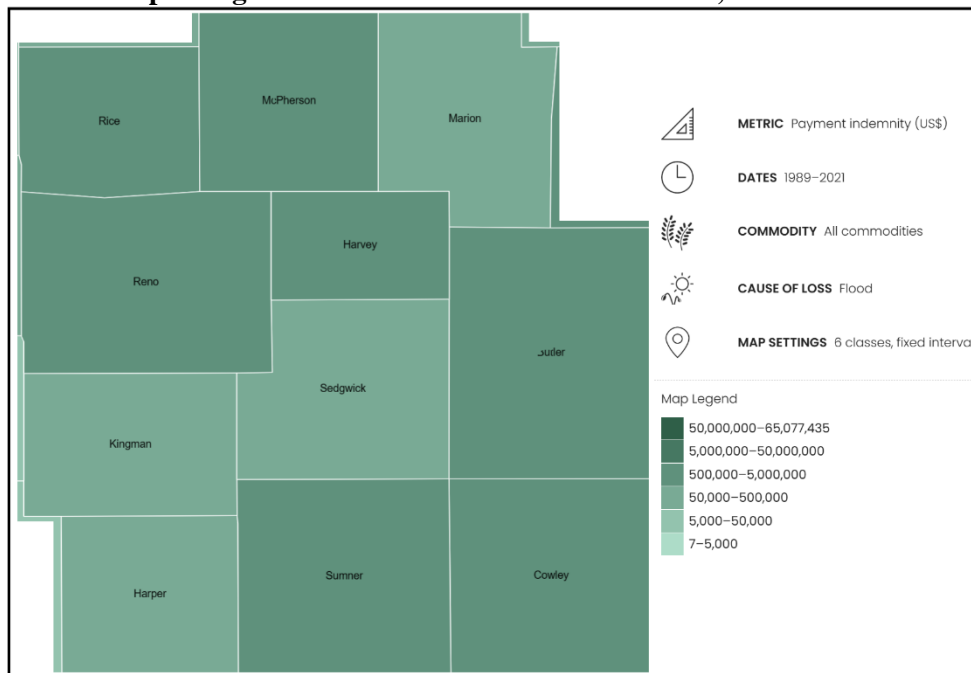

County	Emergency Operations Centers	Fire Stations	Hospitals	Police Stations	Schools
Marion	0	0	0	0	0
McPherson	0	0	0	0	0
Reno	0	0	0	0	0
Rice	0	0	0	0	0
Sedgwick	0	0	0	0	0
Sumner	0	0	0	0	0

Source: FEMA HAZUS

To mitigate the impacts of floods on facilities and critical infrastructure, proactive measures are essential. These measures include proper land use planning, floodplain management, improved building codes and construction standards, early warning systems, flood-resistant infrastructure design, and effective emergency response plans.

Environmental impacts from flooding can be far reaching. Of particular concern is flood related runoff, potentially carrying sewage, pesticides, or hazardous chemicals, which can cause long lasting environmental harm. Expected negative outcomes could include changes in habitat, a decrease of available food, and an increase in the spread of vector-associated disease due to standing water.

Flood events can cause significant agricultural impacts. The following map from the United States Department of Agriculture details total agricultural losses, by county, due to flood conditions from 1989 to 2021:

**Map X: Agricultural Losses Due to Flood Events, 1989 to 2021**

Source: USDA

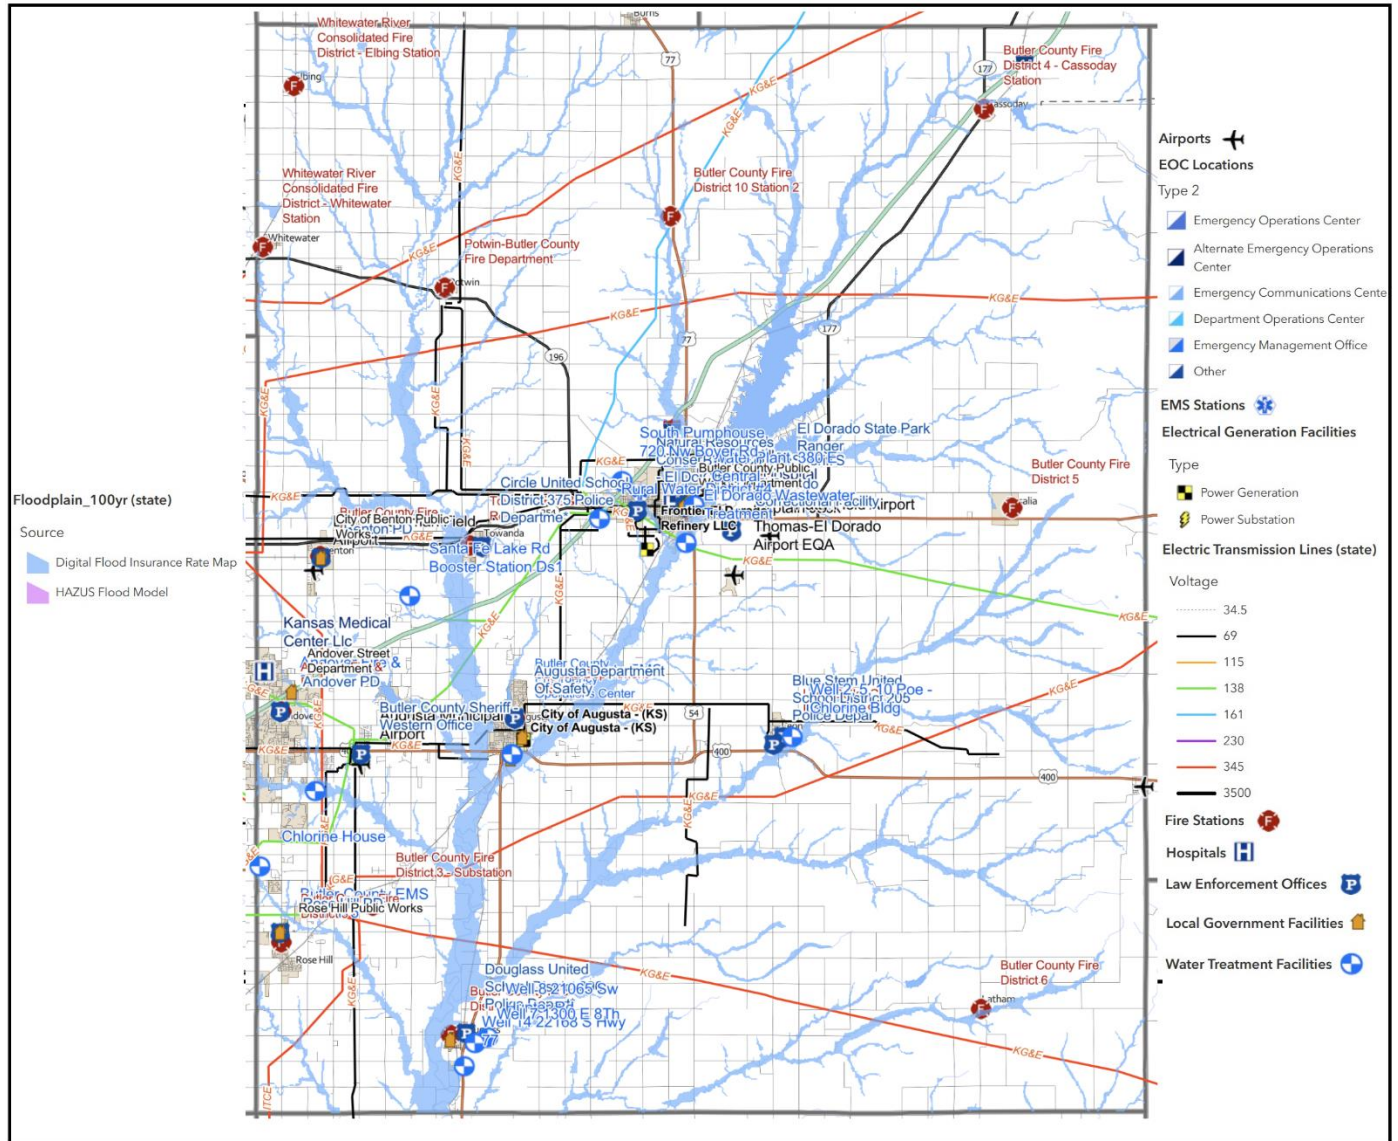

Floods can pose significant risks to local operations, as they can result in a wide range of immediate and long-term consequences including:

- **Emergency Response and Management:** Multiple counties and local jurisdictions may be mobilized to respond to floods. They would coordinate rescue operations, evacuations, and disaster response efforts to mitigate immediate risks to human life and property.

- **Infrastructure Damage and Maintenance:** Transportation and public works departments may need to assess and repair damage to roads, bridges, and other critical infrastructure affected by floodwaters and debris. This can strain resources and disrupt transportation networks.
- **Environmental Oversight and Regulation:** Health departments may be responsible for assessing the environmental impact of floods, monitoring water quality, and coordinating cleanup efforts. They may also be involved in addressing long-term environmental consequences.
- **Water Resource Management:** Water resource agencies may need to manage and allocate water resources differently in the aftermath of floods, especially if the flood affects water supplies, water quality, or flood control systems.
- **Public Health and Safety:** Public health departments may provide support for public health needs during and after a flood, managing emergency shelters and addressing potential health risks from contaminants or waterborne diseases.
- **Long-Term Recovery:** County emergency management agencies play a critical role in long-term recovery efforts, including securing federal disaster assistance, providing financial support to affected communities, and helping with the rebuilding and restoration of infrastructure.

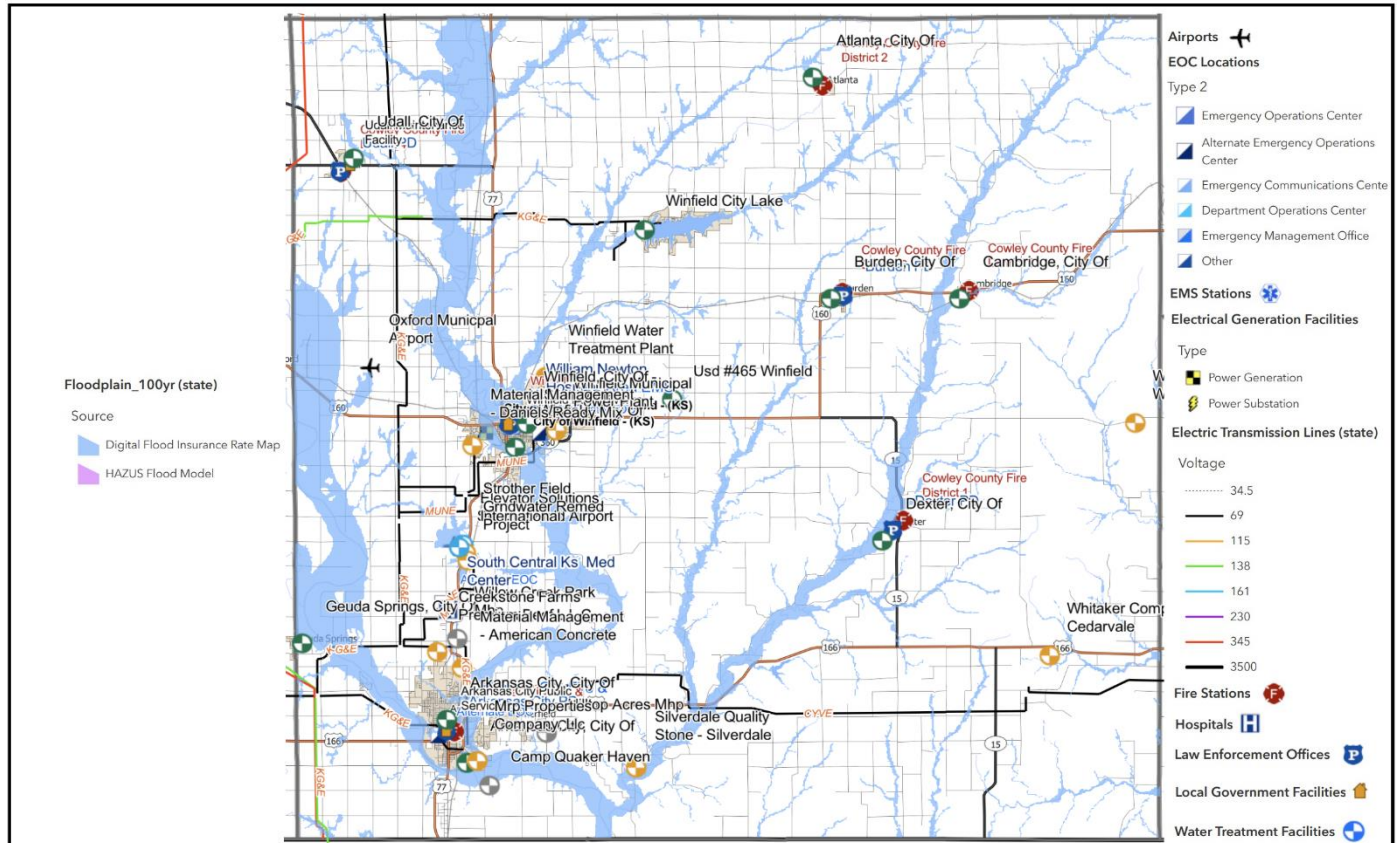

The following maps, generated using the State of Kansas EOPmapper system, detail the location of community lifelines and critical facilities in identified 100-year floodplains:

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating counties from flood:

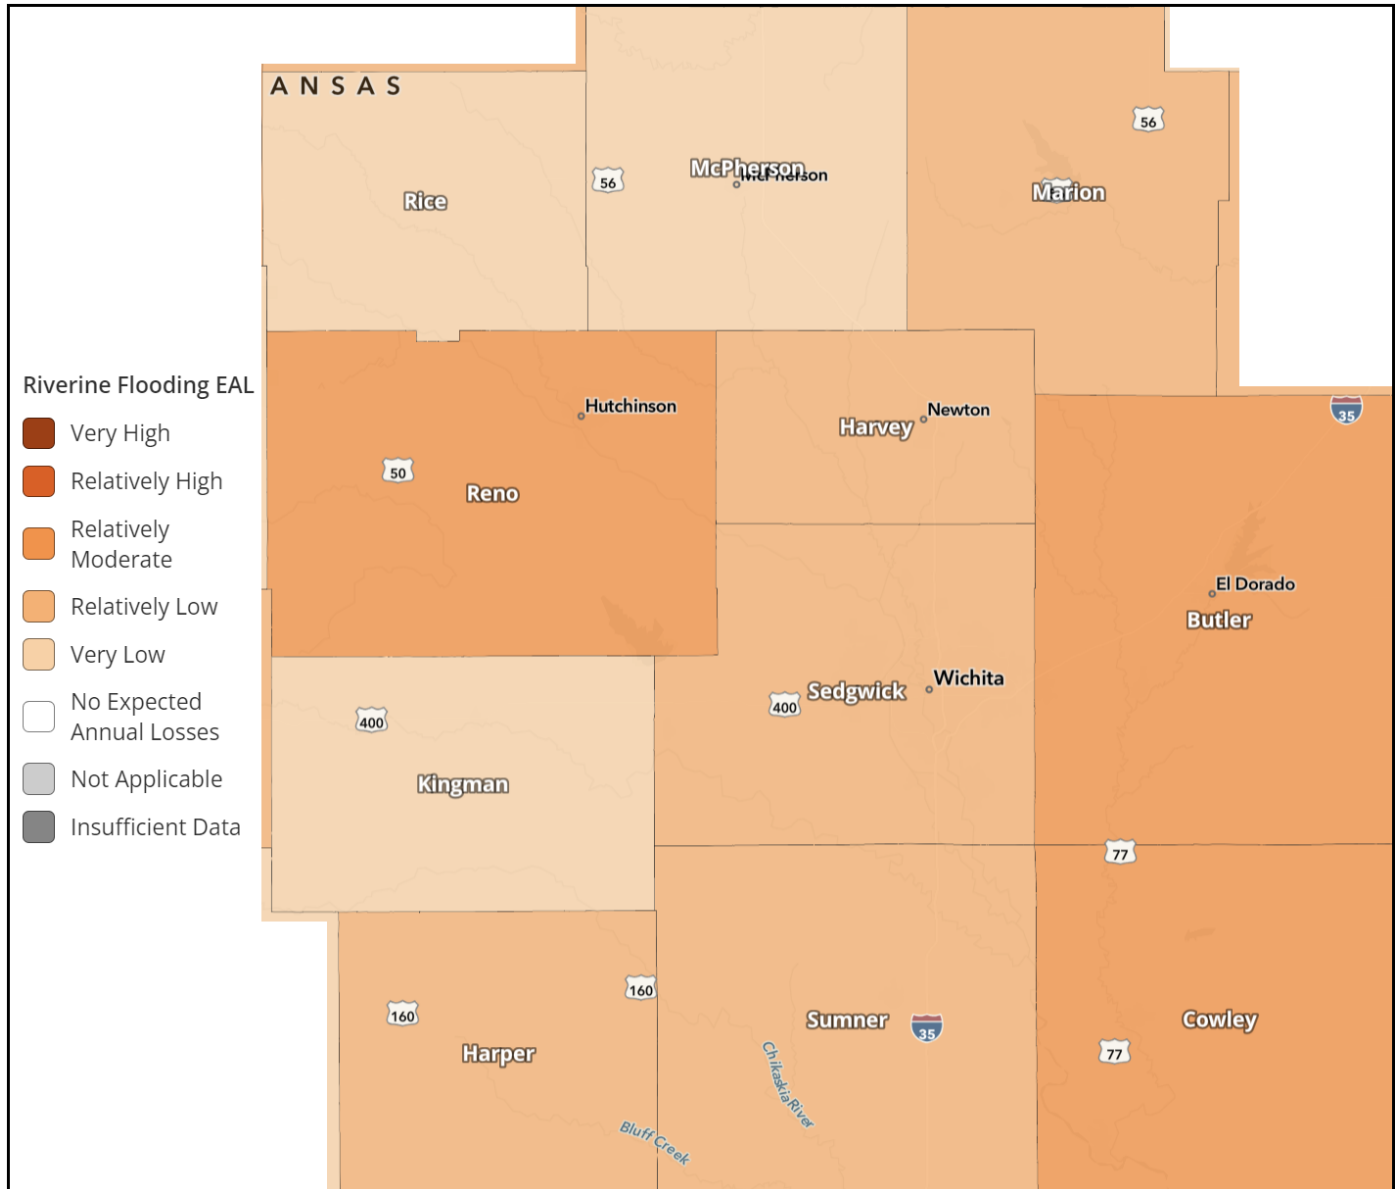

Map X: Kansas Region G FEMA NRI Flood Risk

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community’s risk. The following map indicates the EAL for floods for participating counties within Kansas Region G:

**Map X: Kansas Region G FEMA NRI Flood EAL**

Source: FEMA NRI

The following table indicates the FEMA NRI and EAL analysis for each participating Kansas Region G county for flood:

**Table X: Kansas Region G FEMA NRI and EAL for Flood by County**

County	Risk Index	EAL
Butler	Relatively Moderate	Relatively Moderate
Cowley	Relatively Moderate	Relatively Moderate
Harper	Relatively Low	Relatively Low
Harvey	Relatively Low	Relatively Low
Kingman	Very Low	Very Low
Marion	Relatively Low	Relatively Low
McPherson	Very Low	Very Low
Reno	Relatively Moderate	Relatively Moderate
Rice	Very Low	Very Low
Sedgwick	Relatively Low	Relatively Low
Sumner	Relatively Low	Relatively Low

**Consequence Analysis**

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Flood Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	Significant flooding events can lead to the damage and loss of homes, property, and businesses. Flash flooding and excessive rainfall may lead to dangerous conditions on roadways. Closures of medical facilities is a major public health concern if flooding damages those facilities. Water sources may become contaminated, and water or sewer systems may be disrupted. Vector-associated disease may increase.
Impact on Responders	Fire, police, and emergency responders may be called on to evacuate people from impacted areas, as well as close roads, attend to the injured, and direct traffic away from the flooded area and roads. First responders may face challenges with transportation and access to a location. Flash floods and mudslides due to heavy rainfall can also injure first responders, as well as delay response operations.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. Floods which create power outages, debris damage, and road closures are not uncommon. This threat may impact an agency's ability to maintain continuity of operations based on the incidents impact on power, communications and the potential to damage equipment and records within primary and alternate facilities.
Delivery of Services	Flooding can cause road and bridge closures, as well as disrupt transit services, impacting the ability to deliver goods and services. Exposure to flood waters may also damage or destroy physical goods such as food, clothing, and hygiene products.
Property, Facilities, and Infrastructure	Flooding can cause significant property destruction. Floods can disrupt normal daily activities due to the potential impact on schools, hospitals, and other public infrastructure. Transportation infrastructure can be damaged which could impact the freedom of movement or provision of utilities. Water sources can become contaminated. Water and sewer systems may be disrupted. Solid-waste collection and disposal may also be impacted, causing dangerous public health risks.
Impact on Environment	Rising waters from flooding impact the environment by spreading pollution, inundating water and wastewater treatment plants, and disrupting wildlife. Standing water following a flood event can facilitate the spread of vector-associated diseases.

**Table x: Flood Consequence Analysis**

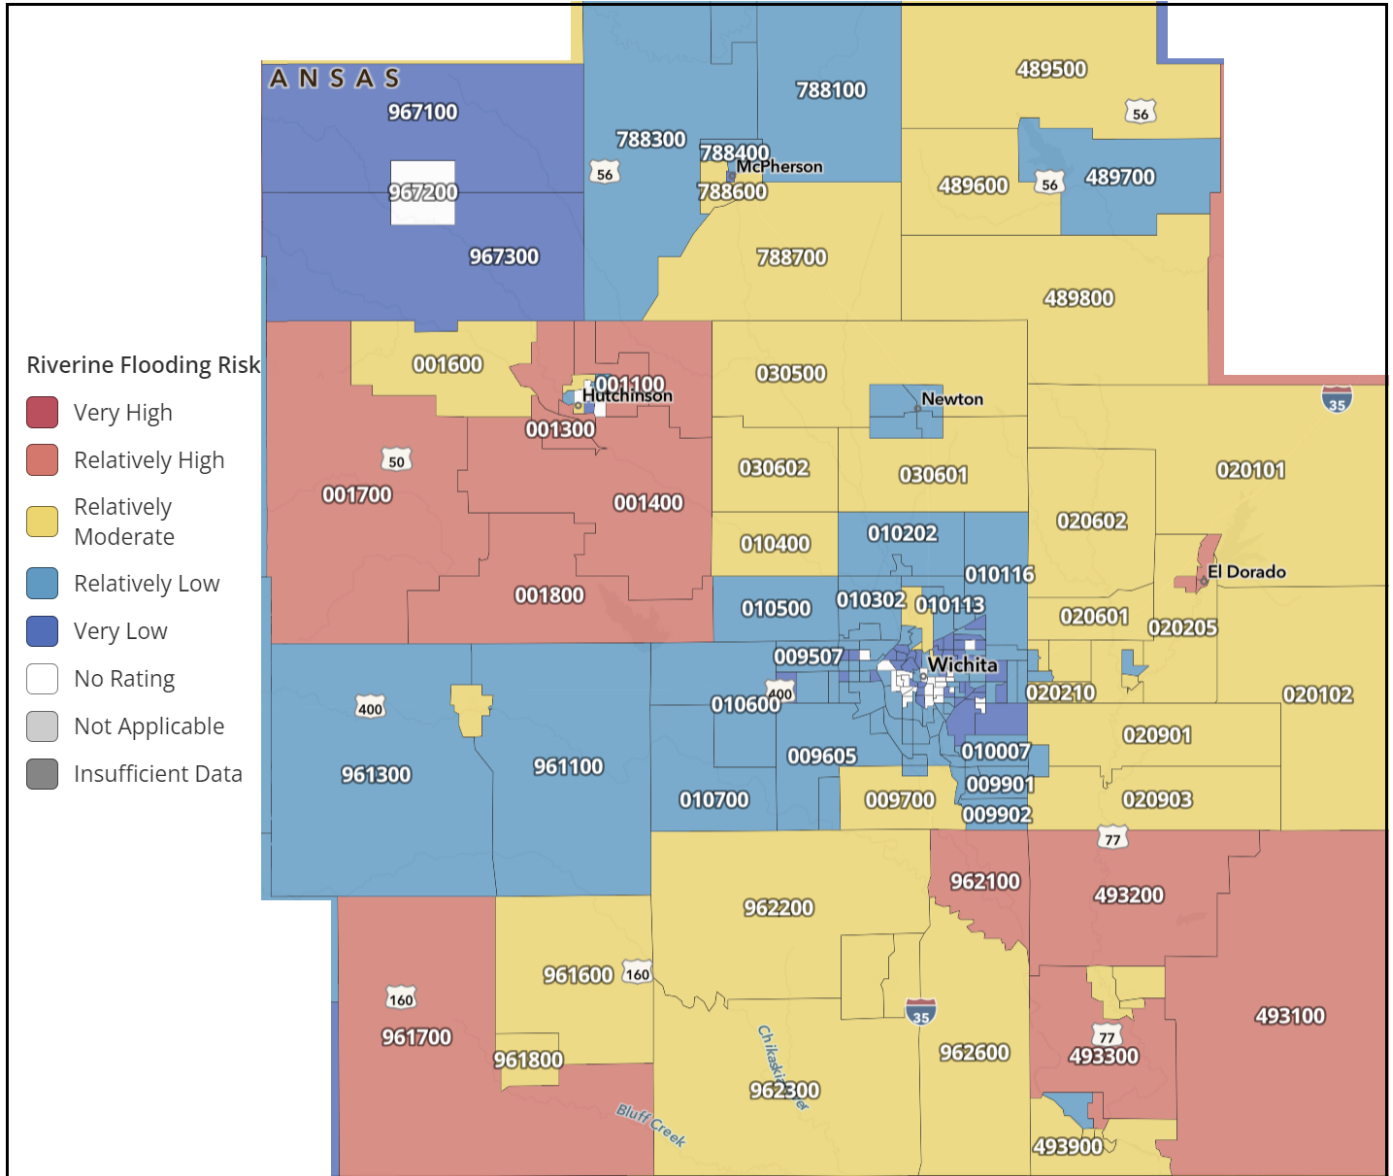

<b>Subject</b>	<b>Potential Impacts</b>
Economic Conditions	Significant and repeated flooding can lower property value throughout the state, which can have a deleterious effect on the tax base. Furthermore, flooding drains response resources, which can be costly during a large flooding event for disaster reimbursement
Public Confidence in Governance	Ineffective flooding response can decrease the public's confidence in the ability to respond and govern. Multi-level government response requires direct actions that must be immediate and effective to maintain public confidence. Efficiency in response and recovery operations is critical in keeping public confidence high.

#### **4.13.7 Jurisdictional Risk and Vulnerability**

To help understand the risk and vulnerability to earthquakes of participating jurisdictions mapping from the FEMA NRI was run on a census tract level. As the NRI does not generate mapping for individual jurisdictions, census tract analysis is the closest analogue available to understand individual jurisdiction conditions.

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating jurisdictions (as indicated by census tract) from floods:

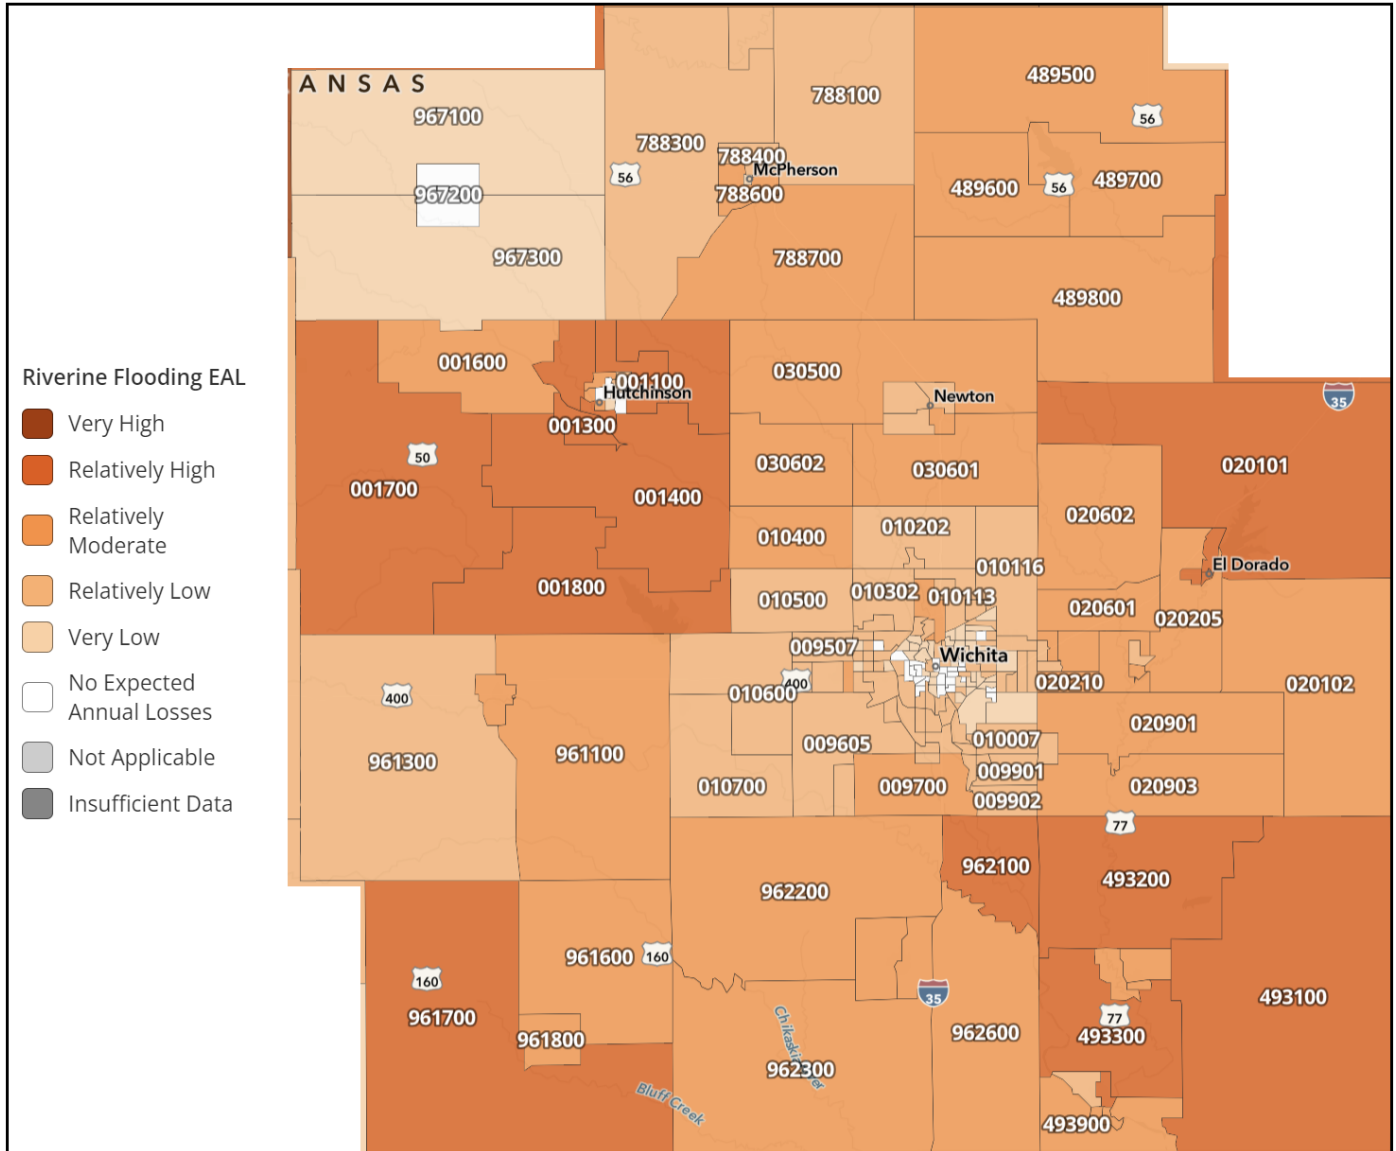

**Map X: FEMA NRI Jurisdictional Flood Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for floods for participating jurisdictions (as indicated by census tract) within Kansas Region G:

**Map X: FEMA NRI Jurisdictional Flood EAL**

Source: FEMA NRI

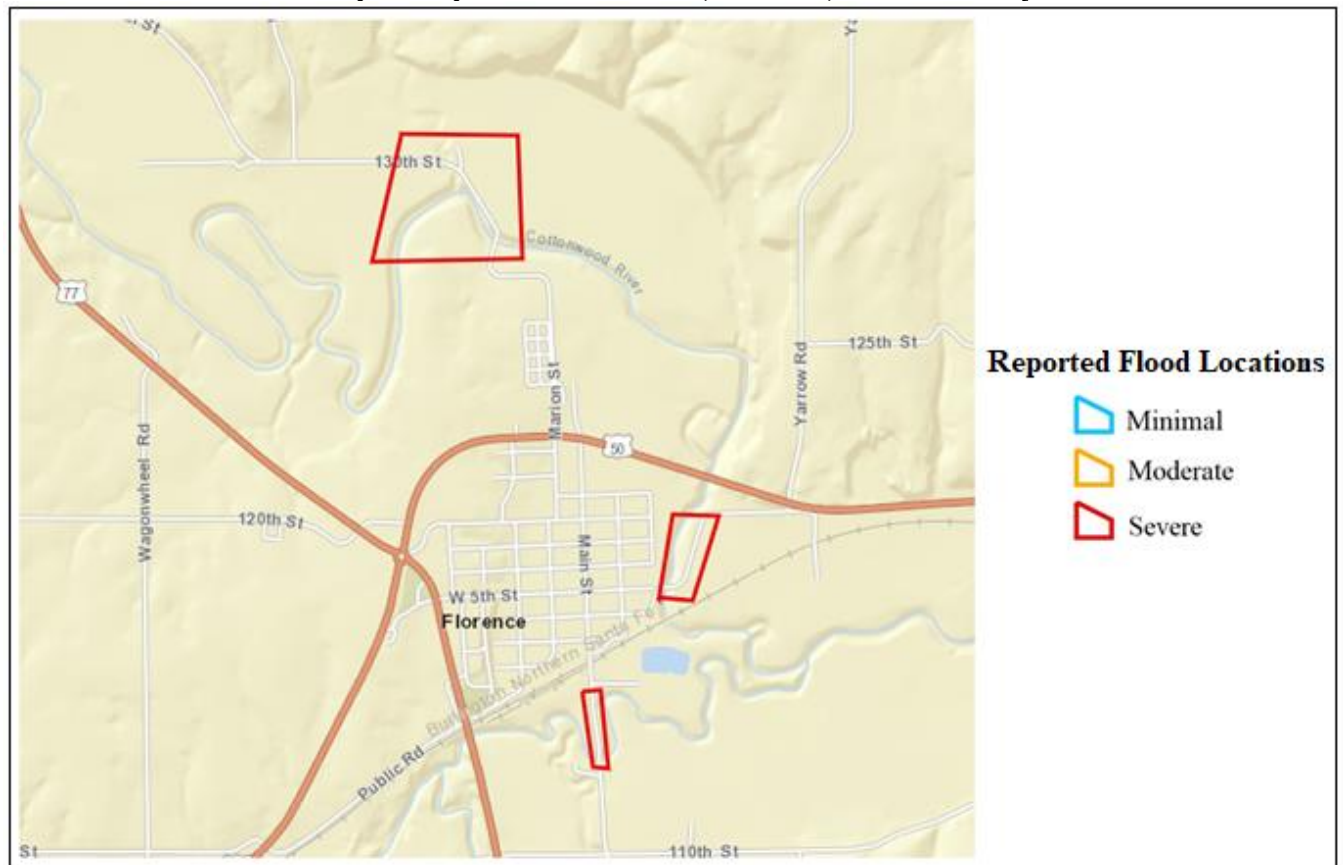

Many local jurisdictions are subject to areas of repeat flooding. In an effort to identify these areas the KDA, in conjunction with the USACE Silver Jackets, has created a mapping system under the Recurring Flood Identification Project. This system allows for the local mapping of known flood areas within regional jurisdictions. Three classifications of flooding areas are used, minimal moderate and severe. The following map indicates identified repeat flood areas within the region.

**Map X: Repeat Flood Location, Andover, Butler County**

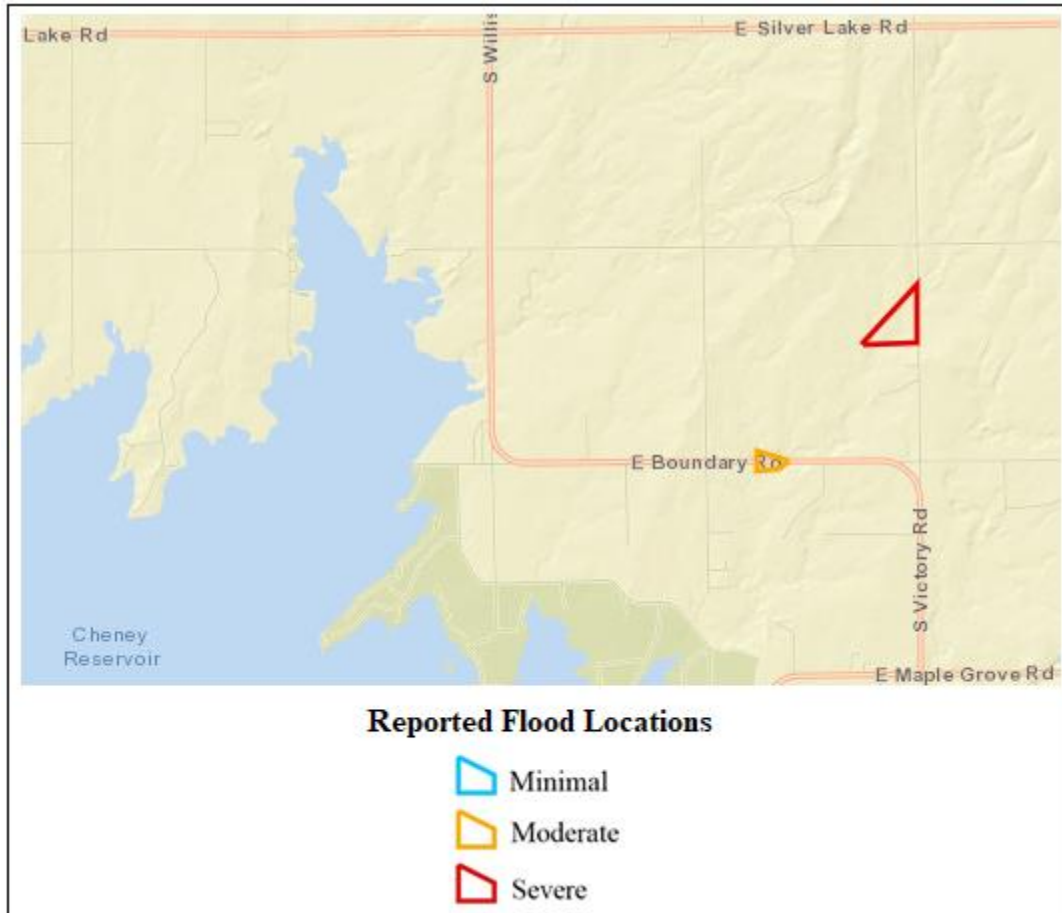

Source: USACE

**Map X: Repeat Flood Location, Florence, Marion County**

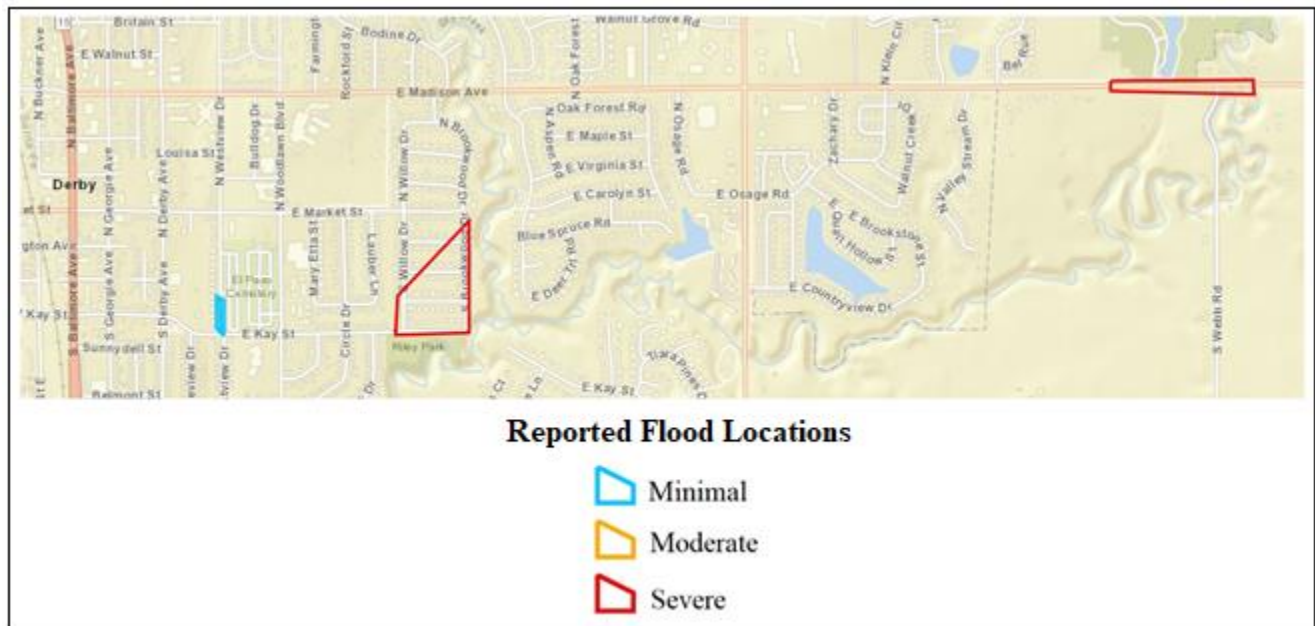

Source: USACE

**Map X: Repeat Flood Location, Reno County**

Source: USACE

**Map X: Repeat Flood Locations, Derby, Sedgwick County**

Source: USACE

**Map X: Repeat Flood Locations, Eastborough, Sedgwick County**

Source: USACE

In addition, information was solicited from participating jurisdictions on low water crossings and roads or areas of concern for flooding. The following tables details provided information.

**Table X: Marion County Low Water Crossings, Roads, and Areas of Concern, Flooding**

County	Road or Area	Location
Marion	20 <sup>th</sup>	Quail Creek – Sunflower
Marion	60 <sup>th</sup>	Limestone – Mustang
Marion	70 <sup>th</sup>	Chisholm Trail – Diamond
Marion	80 <sup>th</sup>	Diamond – Eagle
Marion	90 <sup>th</sup>	Falcon – Goldenrod
Marion	140 <sup>th</sup>	Upland – Hwy 77
Marion	160 <sup>th</sup>	Indigo – Jade
Marion	190 <sup>th</sup>	Quail Creek – Remington
Marion	250 <sup>th</sup>	Upland – Ulysses
Marion	260 <sup>th</sup>	Old Mill – Pawnee
Marion	290 <sup>th</sup>	Old Mill – Pawnee
Marion	330 <sup>th</sup>	Eagle – Falcon
Marion	Bison	300 <sup>th</sup> – 310 <sup>th</sup>
Marion	Bluestem	230 <sup>th</sup> – 235 <sup>th</sup>
Marion	Diamond	70 <sup>th</sup> – 80 <sup>th</sup>
Marion	Old Mill	150 <sup>th</sup> – 160 <sup>th</sup>
Marion	Kanza	150 <sup>th</sup> – 175 <sup>th</sup>
Marion	Lakeshore Drive	Inlet/Outlet
Marion	Nighthawk	110 <sup>th</sup> – 130 <sup>th</sup> and 170 <sup>th</sup> – 190 <sup>th</sup>
Marion	Quail Creek	170 <sup>th</sup> – 180 <sup>th</sup> and 290 <sup>th</sup> – 300 <sup>th</sup>
Marion	Remington	10 <sup>th</sup> – 20 <sup>th</sup> and 220 <sup>th</sup> – 240 <sup>th</sup>
Marion	Sunflower	160 <sup>th</sup> – 180 <sup>th</sup>
Marion	Timber	130 <sup>th</sup> – 140 <sup>th</sup> and 340 <sup>th</sup> – 350 <sup>th</sup>

Notes: NSFHA: No Special Flood Hazard Area - All Zone C

(L): Original FIRM by letter - All Zone A, C and X

(M): No elevation determined - All Zone A, C and X

The CRS is a voluntary incentive program that recognizes and encourages community floodplain management practices that exceed the minimum requirements of the NFIP. In CRS communities, flood insurance premium rates are discounted to reflect the reduced flood risk resulting from the community's efforts that address the three goals of the program:

- Reduce and avoid flood damage to insurable property
- Strengthen and support the insurance aspects of the National Flood Insurance Program
- Foster comprehensive floodplain management•

The following Region G jurisdictions are currently participating in the CRS:

**Table X: Kansas Region G CRS Communities**

<b>Jurisdiction</b>	<b>County</b>	<b>CRS Entry Date</b>	<b>Current Class</b>	<b>SFHA Discount</b>
Anthony	Harper	5/01/2017	8	10%

**4.13.9 FEMA Flood Policy and Loss Data**

Kansas Region G flood policy information was sourced from FEMA's Flood Insurance Data and Analytics. The number of flood insurance policies in effect may not include all structures at risk of flooding, and it likely that some properties are under-insured. The flood insurance purchase requirement is for flood insurance in the amount of federally backed mortgages, not the entire value of the structure. Additionally, contents coverage is not required. The following table shows the details of NFIP policy statistics for Kansas Region G:

**Table X: Kansas Region G NFIP Coverage**

<b>Jurisdiction</b>	<b>Number of Policies in Force</b>	<b>Total Coverage</b>
<b>Butler County</b>

#### 4.13.10 Repetitive Loss Structures

A high priority for Kansas Region G is the mitigation of, and/or the reduction of losses to, Repetitive Loss (RL) and Severe Repetitive Loss (SRL) structures. The NFIP defines a RL property as:

- Any insurable building for which two or more claims of more than \$1,000 were paid by the NFIP within any rolling 10-year period, since 1978. At least two of the claims must be more than 10 days apart.

The definition of severe repetitive loss as applied to this program was established in section 1361A of the National Flood Insurance Act, as amended, 42 U.S.C. 4102a. An SRL property is defined as a residential property that is covered under an NFIP flood insurance policy and:

- That has at least four NFIP claim payments (including building and contents) over \$5,000 each, and the cumulative amount of such claims payments exceeds \$20,000; or
- For which at least two separate claims payments (building payments only) have been made with the cumulative amount of the building portion of such claims exceeding the market value of the building.

For both of the above, at least two of the referenced claims must have occurred within any ten-year period and must be greater than ten days apart.

The following table details information concerning RL identified properties in Kansas Region G:

**Table X: Kansas Region G RL Properties**

# 4.14 Severe Thunderstorms

## 4.14.1 Hazard Description

Severe thunderstorms comprise the hazardous and damaging weather effects often found in violent storm fronts. They can occur together or separate, they are common and usually not hazardous, but on occasion they can pose a threat to life and property.

This plan defines severe thunderstorms as a combination of the following severe weather effects as defined by NOAA and the NWS:

- **Hail:** Precipitation in the form of irregular pellets or balls of ice more than 5 mm in diameter, falling from a cumulonimbus cloud.
- **Lightning:** A visible electrical discharge produced by a thunderstorm. The discharge may occur within or between clouds, between the cloud and air, between a cloud and the ground or between the ground and a cloud.
- **Thunderstorm Winds:** The same classification as high or strong winds but accompanies a thunderstorm. It is also referred to as a straight-line wind to differentiate from rotating or tornado associated wind. Additionally, these winds can rapidly create dust storms that severely impact visibility.

Severe thunderstorms have been so consistent throughout modern history that much of the vulnerability is mitigated. However, this section is not concerned with everyday wind, lightning in the sky, or mild precipitation. This section is concerned with common storm elements when they behave such that they pose a threat to property and life.

## 4.14.2 – Location and Extent

Severe thunderstorms can rapidly descend on an area, but in many cases are predictable. Most weather forecasts focus on more than just temperature but on quickly changing conditions that may lead to the onset of severe storms. All of Kansas Region G is susceptible to severe thunderstorms.

The NWS classifies thunderstorms, often the generator of hail, lightning and high winds, using the following categories.

- **Marginal:** Isolated severe thunderstorms, limited in duration and/or coverage and/or intensity
- **Slight:** Scattered severe storms possible, short-lived and/or not widespread, isolated intense storms possible
- **Enhanced:** Numerous severe storms possible, more persistent and/or widespread, a few intense
- **Moderate:** Widespread severe storms likely, long-lived, widespread and intense
- **High:** Widespread severe storms expected, long-lived, very widespread and particularly intense

In the United States, hail causes billions of dollars in damage to property each year. Vehicles, roofs of buildings and homes, and landscaping are most commonly damaged by hail. Hail has been known to cause injury and the occasional fatality to humans, often associated with traffic accidents.

Based on information provided by the Tornado and Storm Research Organization, the following table describes typical damage impacts of the various sizes of hail.

Table X: Tornado and Storm Research Organization Hail Damage Descriptions

Intensity Category	Diameter (inches)	Typical Damage Impacts
Hard Hail	0.2-0.4	No damage
Potentially Damaging	0.4-0.6	Slight general damage to plants, crops
Significant	0.6-0.8	Significant damage to crop and vegetation

**Table X: Tornado and Storm Research Organization Hail Damage Descriptions**

Intensity Category	Diameter (inches)	Typical Damage Impacts
Severe	0.8-1.2	Severe damage to crops, damage to glass and plastic, paint and wood scored
Severe	1.2-1.6	Widespread glass damage, vehicle bodywork damage
Destructive	1.6-2.0	Wholesale destruction of glass, damage to tiled roofs, significant risk of injuries
Destructive	2.0-2.4	Bodywork of grounded aircraft dented, brick walls pitted
Destructive	2.4-3.0	Severe roof damage, risk of serious injuries
Super Hailstorms	3.6-3.9	Extensive structural damage. Risk of severe or even fatal injuries to persons caught in the open
Super Hailstorms	4.0+	Extensive structural damage. Risk of severe or even fatal injuries to persons caught in the open

Source: Tornado and Storm Research Organization

A recent report by the Insurance Information Institute says lightning strikes caused \$1,300,000,000 in damage across the United States in 2021. There is currently no scale to indicate the severity of a lightning strike, but data from NOAA indicates that there approximately 25,000,000 cloud-to-ground lightning strikes per year in the United States.

To measure wind speed and its correlating potential for damage, experts use the Beaufort scale as shown below.

**Table 54: Beaufort Scale**

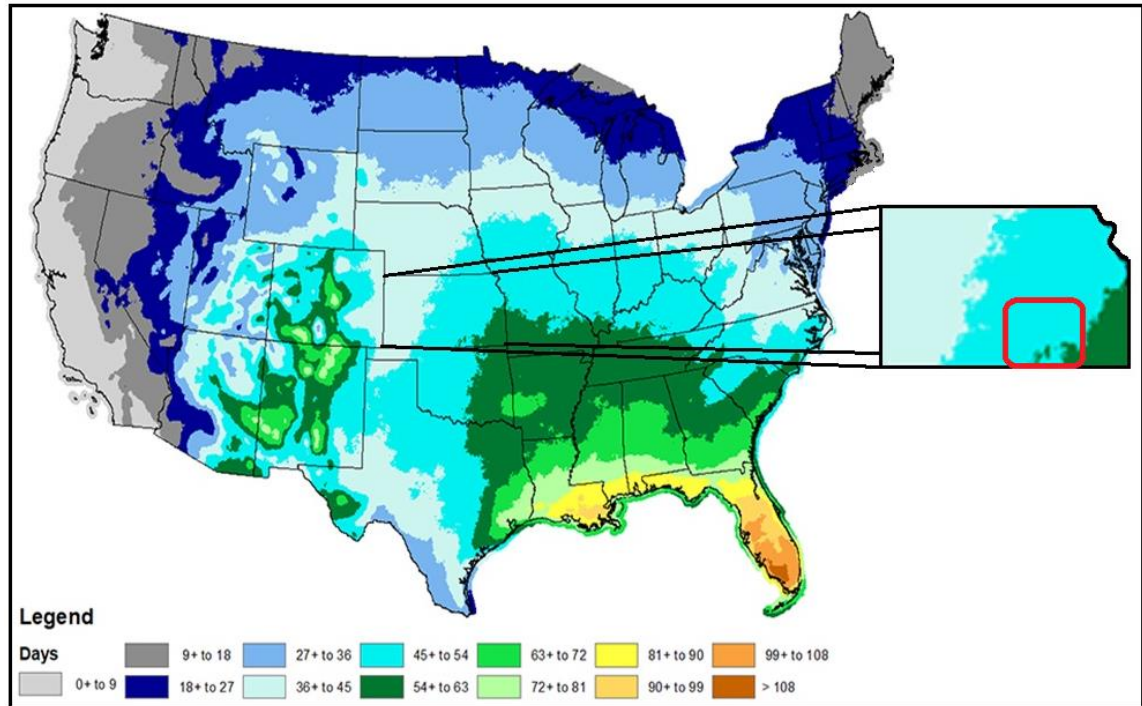

Beaufort Number	Wind Speed (mph)	Effects on Land
0	Under 1	Calm, smoke rises vertically
1	1-3	Smoke drift indicates wind direction, vanes do not move
2	4-7	Wind felt on face, leaves rustle, vanes begin to move
3	8-12	Leaves, small twigs in constant motion. Light flags extended.
4	13-18	Dust, leaves and loose paper raised up; small branches move
5	19-24	Small trees begin to sway
6	25-31	Large branches of trees in motion, whistling heard in wires
7	32-38	While trees in motion, resistance felt in walking against the wind
8	39-46	Twigs and small branches broken off trees
9	47-54	Slight structural damage occurs, slate blown from roofs
10	55-63	Seldom experienced on land, trees broken, structural damage occurs
11	64-72	Very rarely experienced on land, usually with widespread damage
12	73 or higher	Violence and destruction

Source: NOAA

The widespread and frequent nature of thunderstorms makes hail, lightning, and high wind a relatively common occurrence for Kansas Region G. The following map, from NOAA, indicates annual mean thunderstorm days from 1993 to 2018.

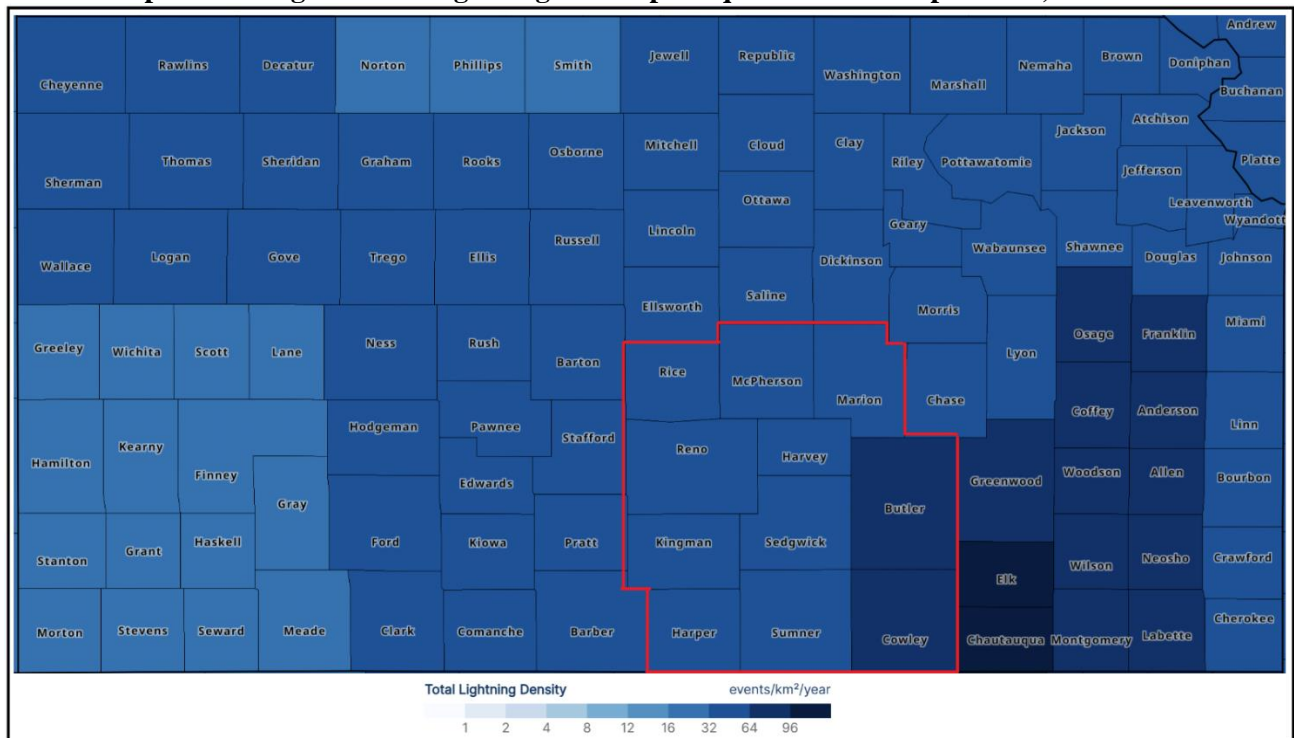

**Map X: Annual Mean Thunderstorm Days, 1993-2018**

Source: NOAA

The following map, from Vaisala, indicates the average annual light events per square kilometer per year for Kansas Region G.

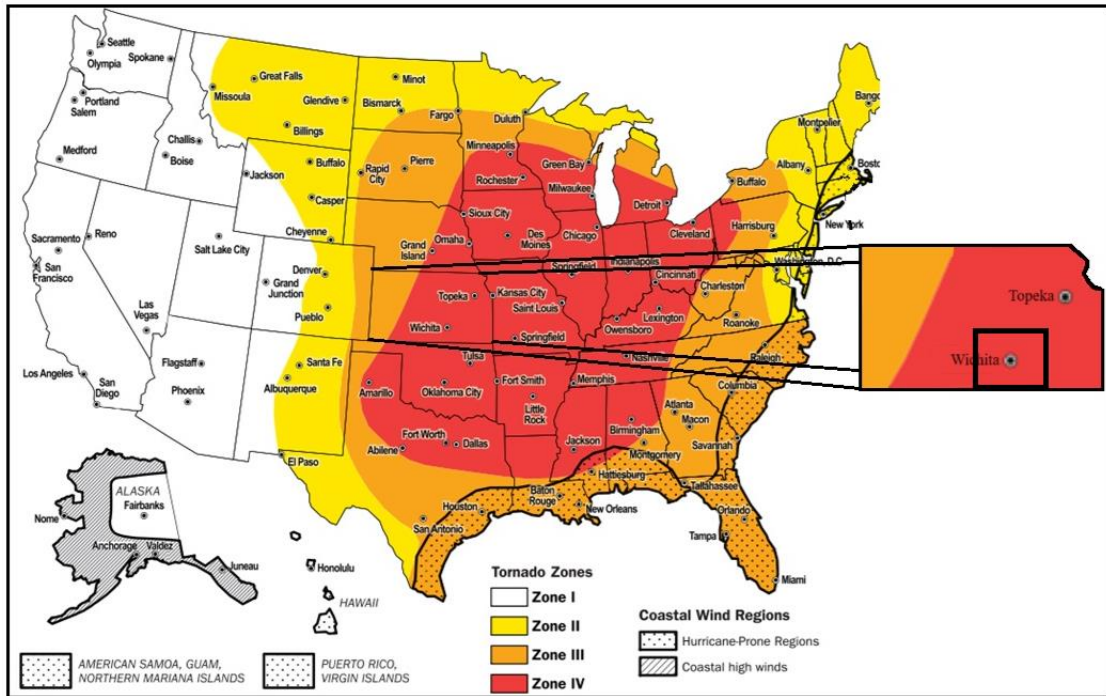

**Map 32: Average Annual Lightning Events per Square Kilometer per Year, 2016 - 2022**

Source: Vaisala

The following maps from FEMA indicate highest possible expected wind speeds for Kansas Region G.

**Map X: Wind Zones**

Source: FEMA

#### 4.14.3 Previous Occurrences

Historical events of significant magnitude or impact can result in a Presidential Disaster Declaration. The following table details Presidential Disaster Declarations related to severe storms.

**Table X: Kansas Region G Presidentially Declared Disasters**

Designation	Declaration Date	Incident Type	Counties	Assistance
DR-4640-KS	03/22/2022	Severe Storms and Straight-Line Winds	Sumner	\$12,159,785
DR-4499-KS	08/14/2019	Severe Storms, Straight-Line Winds, Flooding, Tornadoes, Landslides, and Mudslides	Butler, Cowley, Harper, Harvey, Kingman, Marion, McPherson, Reno, Rice, and Sumner	\$51,157,548
DR-4417-KS	03/20/2019	Severe Storms, Straight-Line Winds, and Flooding	Cowley, Kingman, Reno, and Sumner	\$3,509,374

In addition to the Presidentially Declared Disasters, the following table presents NCEI identified severe thunderstorm events and the resulting damage totals in Kansas Region G from 2009 to 2023:

**Table X: NCEI Kansas Region G Thunderstorm Events**

County	Event Type	Number of Days with Events	Property Damage	Deaths and Injuries
Butler	Hail	109	\$11,000,000	0
	Lightning	1	\$50,000	0
	Winds	115	31,427,000	5
Cowley	Hail	79	\$10,850	0
	Lightning	4	\$200,000	0
	Winds	80	\$2,080,000	2
	Hail	41	\$300,000	0

**Table X: NCEI Kansas Region G Thunderstorm Events**

County	Event Type	Number of Days with Events	Property Damage	Deaths and Injuries
Harper	Lightning	0	\$0	0
	Winds	36	\$116,750	0
Harvey	Hail	46	\$30,000	0
	Lightning	0	\$0	0
	Winds	49	\$892,500	0
Kingman	Hail	56	\$80,000	0
	Lightning	2	\$180,000	0
	Winds	57	\$506,500	2
Marion	Hail	54	\$70,500	0
	Lightning	2	\$8,000	0
	Winds	45	\$727,650	11
McPherson	Hail	63	\$800,000	0
	Lightning	0	\$0	0
	Winds	71	\$2,826,000	1
Reno	Hail	79	\$305,000	0
	Lightning	2	\$0	1
	Winds	86	\$2,120,000	6
Rice	Hail	52	\$886,000	0
	Lightning	0	\$0	0
	Winds	51	\$252,200	0
Sedgwick	Hail	114	\$164,578,200	20
	Lightning	11	\$430,000	3
	Winds	118	\$3,304,000	5
Sumner	Hail	68	\$160,000	0
	Lightning	0	\$0	0
	Winds	63	\$1,300,000	0

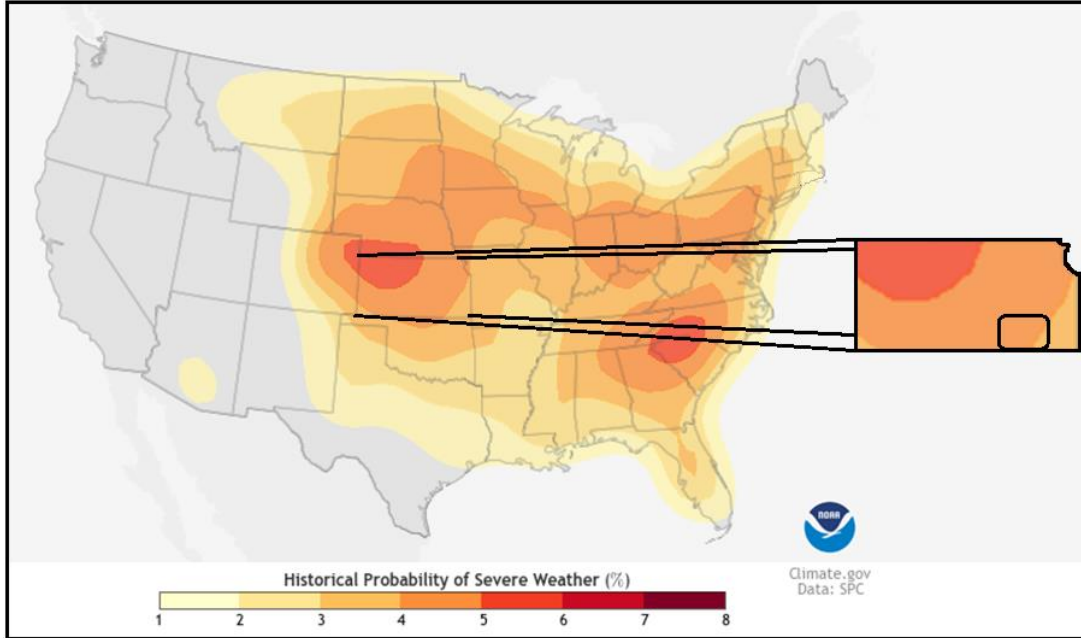

Source: NCEI

It is worth noting that damage estimates indicated by the NCEI are often artificially low. This underreporting is a result of the way the events are reported to the NCEI, often by the local and/or NWS office. When reporting an event oftentimes the NWS office does not have access to the actual damage assessment resulting from that event. As such, the report often details a very low amount or zero-dollar amount for damages. Additionally, deaths and injuries may be underreported as they may be a result of a concurrent event, such as a person driving unsafely during heavy rain and passing away.

#### 4.14.4 Probability of Future Events

Predicting the probability of severe thunderstorm occurrences is tremendously challenging due to the large number of factors involved and the random nature of formation. Data from NOAA indicates that Kansas Region G can expect between 27 - 45 thunderstorms per year. Additionally, the following map from NOAA provides a snapshot for the probability of a severe weather event on a summer day.

**Map X: Historic Probability of a Severe Weather Summer Event In Kansas Region G**

Source: NOAA

Based on historical occurrences, Kansas Region G will continue to experience severe thunderstorm events on an annual basis. The following tables, using data from the NCEI, indicate the yearly probability of a severe thunderstorm component event, the number of deaths or injuries, and estimated property damage for each county in Kansas Region G.

**Table X: Kansas Region G NCEI Hail Event Probability Summary**

County	Days with Event	Average Events per Year	Deaths / Injuries	Average Deaths / Injuries per Year	Property Damage	Average Property Damage per Year
Butler	109	7	0	0	\$11,000,000	\$733,333
Cowley	79	5	0	0	\$10,850	\$723
Harper	41	3	0	0	\$300,000	\$20,000
Harvey	46	3	0	0	\$30,000	\$2,000
Kingman	56	4	0	0	\$80,000	\$5,333
Marion	54	4	0	0	\$70,500	\$4,700
McPherson	63	4	0	0	\$800,000	\$53,333
Reno	79	5	0	0	\$305,000	\$20,333
Rice	52	3	0	0	\$886,000	\$59,067
Sedgwick	114	8	20	1	\$164,578,200	\$10,971,880
Sumner	68	5	0	0	\$160,000	\$10,667

Source: NCEI

**Table X: Kansas Region G NCEI Lightning Event Probability Summary**

County	Days with Event	Average Events per Year	Deaths / Injuries	Average Deaths / Injuries per Year	Property Damage	Average Property Damage per Year
Butler	1	0	0	0	\$50,000	\$3,333
Cowley	4	0	0	0	\$200,000	\$13,333
Harper	0	0	0	0	\$0	\$0

**Table X: Kansas Region G NCEI Lightning Event Probability Summary**

County	Days with Event	Average Events per Year	Deaths / Injuries	Average Deaths / Injuries per Year	Property Damage	Average Property Damage per Year
Harvey	0	0	0	0	\$0	\$0
Kingman	2	0	0	0	\$180,000	\$12,000
Marion	2	0	0	0	\$8,000	\$533
McPherson	0	0	0	0	\$0	\$0
Reno	2	0	1	<1	\$0	\$0
Rice	0	0	0	0	\$0	\$0
Sedgwick	11	1	3	<1	\$430,000	\$28,667
Sumner	0	0	0	0	\$0	\$0

Rice	51	3	0	0	\$252,200	\$16,813
Sedgwick	118	8	5	<1	\$3,304,000	\$220,267
Sumner	63	4	0	0	\$1,300,000	\$86,667

Source: NCEI

**4.14.5 Projected Changes in Location, Intensity, Frequency, and Duration**

Climate change can have several impacts on severe thunderstorms, although the precise details can vary depending on regional climate patterns and other factors. In general, it is believed that climate change can alter the timing and seasonality of severe thunderstorms. In some cases, this may mean more thunderstorms occurring earlier or later in the year.

Climate change can lead to increased temperatures and moisture levels in the atmosphere, which can provide favorable conditions for the development of severe thunderstorms. This can result in a higher frequency of severe thunderstorm events and an increase in their intensity. As a result of increased temperatures, warmer air can hold more moisture, leading to increased rainfall during severe thunderstorms. This can elevate the risk of flash flooding, particularly in areas prone to heavy precipitation. Changes in atmospheric circulation patterns associated with climate change can lead to stronger winds within thunderstorms. This can result in more powerful wind gusts, increasing the risk of wind damage and downed trees and power lines.

Climate change can influence the conditions necessary for hail formation within thunderstorms. Warmer temperatures at the surface and greater instability in the atmosphere can contribute to larger and more damaging hailstones. Additionally, changes in atmospheric conditions can affect the frequency and distribution of lightning strikes associated with thunderstorms. More lightning can increase the risk of wildfires in dry regions.

It is important to note that while there is evidence linking climate change to changes in weather patterns that can influence severe thunderstorms, predicting specific thunderstorm events remains challenging. Climate models provide

valuable insights into long-term trends, but individual thunderstorm events are influenced by a complex interplay of factors.

#### **4.14.6 Vulnerability and Impact**

Severe thunderstorms can have a wide range of effects on people, often posing significant risks to life, property, and general well-being. In the absence of proper shelter, hail, lightning, and high winds can cause serious injury. In general, if potentially exposed persons take shelter in a solid, well-constructed structure protection from these severe thunderstorm components would be provided. However, old or poorly constructed facilities may be more prone to damage, potentially increasing the impact on economically disadvantaged populations. Some of the potential effects of severe thunderstorms on people may include:

- **Death and Injury:** Thunderstorms produce lightning and strong winds driving debris. Both of these elements can cause injuries or fatalities.
- **Power Outages:** Lightning strikes, strong winds, and falling trees can lead to power outages, disrupting daily life, and potentially affecting essential services, such as medical equipment and refrigeration.
- **Mental Health Impact:** Severe thunderstorms can be frightening and stressful, leading to anxiety and post-traumatic stress disorder in some individuals. The emotional toll of property damage and loss can also be significant.
- **Displacement:** People may need to evacuate their homes or be temporarily displaced due to storm damage, requiring emergency shelter and support.
- **Economic Costs:** Severe thunderstorms result in economic costs, including repair and recovery expenses, insurance claims, and potential loss of income due to property damage or work disruptions.
- **Public Safety Response:** Severe thunderstorms can strain public safety resources, including emergency services, law enforcement, and medical facilities.

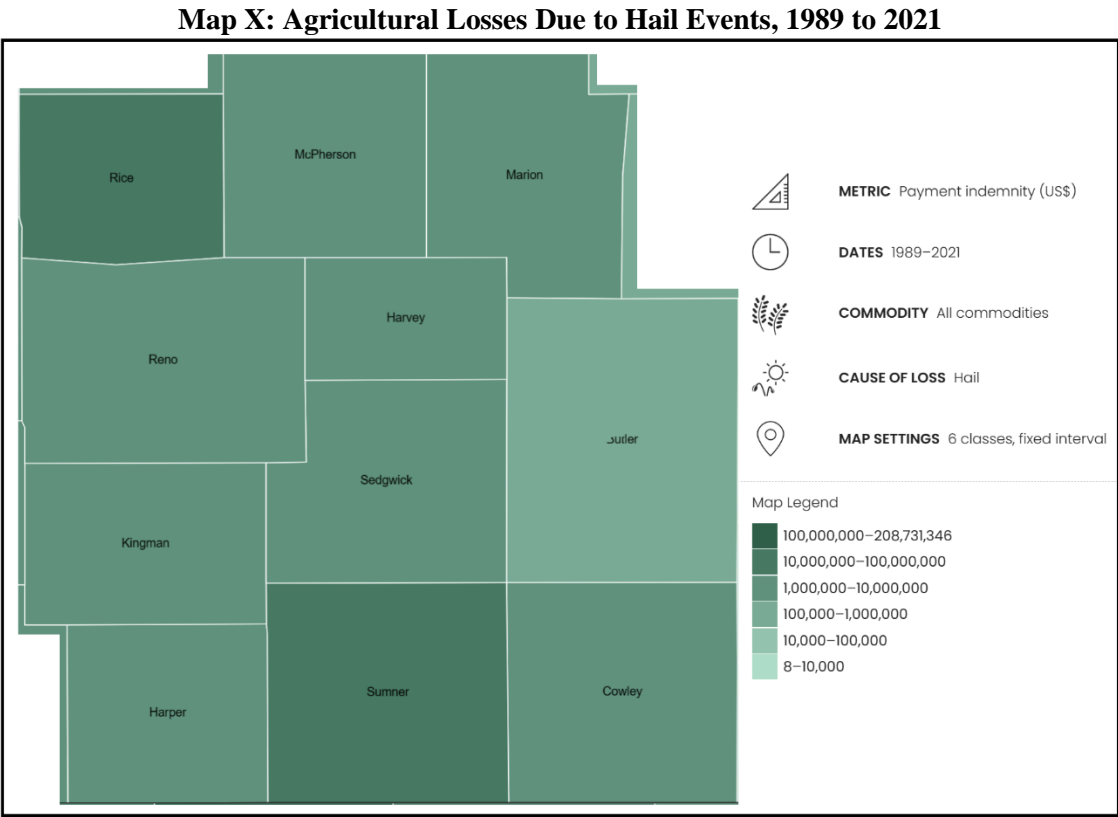

All facilities within Kansas Region G can be impacted by severe thunderstorms, including critical facilities. However, the location and construction of the facility will have a significant impact on the vulnerability. In general, older structures would be at higher risk of negative impacts. Some of the potential impacts include:

- **Electrical Infrastructure Damage:** Severe thunderstorms can damage electrical infrastructure, including power lines, transformers, and substations. This can result in widespread power outages, affecting homes, businesses, hospitals, and other critical facilities.
- **Communication Disruptions:** Thunderstorms can disrupt telecommunications infrastructure, including cell towers, data centers, and communication networks. This can impact emergency communication and coordination efforts.
- **Transportation Disruptions:** Heavy rain, strong winds, and flooding can damage roads, bridges, and transportation networks. This can lead to transportation disruptions, accidents, and delays, affecting the movement of goods and people.
- **Airport Closures:** Thunderstorms can force the closure of airports due to safety concerns, affecting air travel and cargo shipments.
- **Water and Wastewater Systems:** Severe storms can overwhelm water treatment plants and wastewater facilities, leading to contamination and water supply disruptions. Flooding can also damage water infrastructure.
- **Critical Facilities:** Hospitals, emergency response centers, and other critical facilities may be affected by power outages, flooding, and damage to infrastructure. This can impact the ability to provide essential services during and after the storm.
- **Energy Generation:** Thunderstorms can disrupt energy generation facilities, such as wind farms and solar installations, and damage conventional power plants. This can affect the availability of electricity.
- **Safety Risks:** Damage to infrastructure can pose safety risks to workers and the public. Fallen power lines, damaged buildings, and debris can be hazardous.

Severe thunderstorms can pose various risks to the environment. These risks can have both short-term and long-term impacts on natural ecosystems. Severe thunderstorms can produce heavy rainfall over a short period of time, leading to flash floods and riverine flooding. This can result in soil erosion, damage to aquatic habitats, and the displacement of aquatic organisms. Large hailstones can damage crops, vegetation, and natural habitats. Hail can strip leaves from trees and plants, reducing their ability to photosynthesize and grow. It can also damage wildlife habitats. Severe thunderstorms often produce strong straight-line winds. These winds can uproot trees, damage forests, and disrupt animal habitats. They can also scatter debris and cause structural damage to buildings, which can lead to further environmental issues if hazardous materials are released. Lightning is a common occurrence in thunderstorms and can spark wildfires. These wildfires can have significant ecological impacts, including habitat destruction, loss of wildlife, and changes in the local ecosystem.

Hail events can cause significant agricultural impacts. The following map from the United States Department of Agriculture details total agricultural losses, by county, due to hail events from 1989 to 2021:

Source: USDA

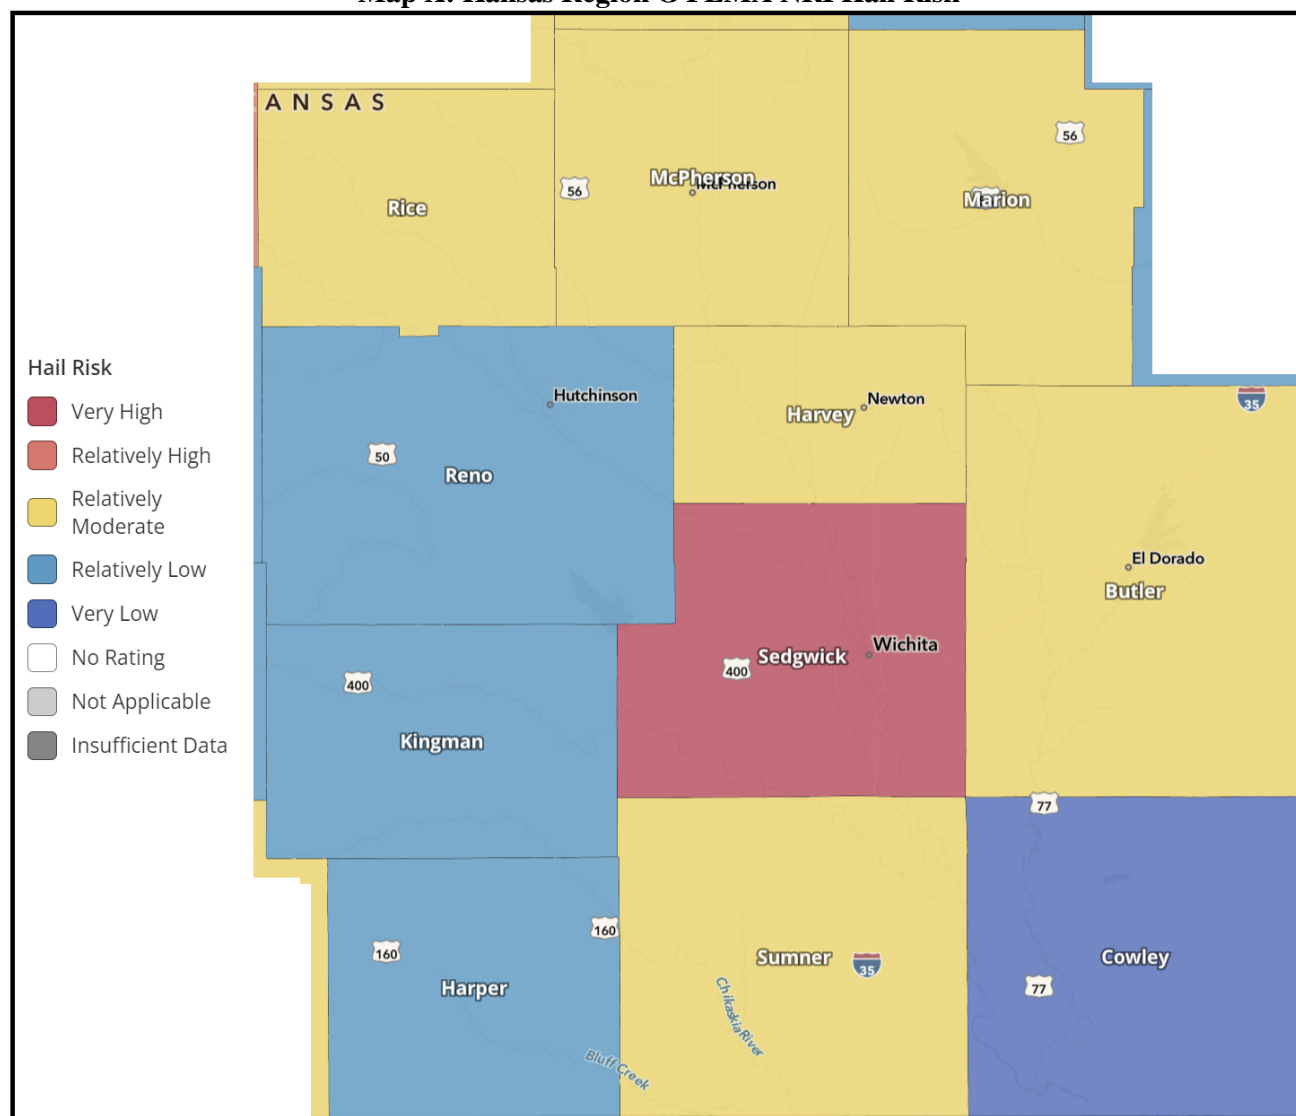

Severe thunderstorms can pose various risks to government operations and facilities. These risks can have significant economic and operational consequences, and can include:

- **Structural Damage:** High winds, hail, and tornadoes associated with severe thunderstorms can cause significant damage to government buildings and infrastructure. This can result in costly repairs and disruptions to government operations.
- **Power Outages:** Severe thunderstorms can lead to power outages by damaging electrical infrastructure such as power lines and substations. Government buildings may lose power, affecting critical operations and services.
- **Flooding:** Heavy rainfall during severe thunderstorms can lead to flooding, which can damage government buildings and disrupt operations. Flood damage may require extensive repairs and cleanup.

- **Communication Disruptions:** Lightning strikes can damage communication equipment, including telephone lines and computer systems. This can hinder communication between government agencies and the public.
- **Transportation Disruptions:** Severe thunderstorms can make roads impassable due to flooding or fallen trees. This can impact the ability of government employees to commute to work and can disrupt the delivery of goods and services.
- **Emergency Response:** Severe thunderstorms may require the activation of emergency response plans. This can strain resources and personnel, especially if the storms lead to widespread damage or evacuations.
- **Loss of Records and Data:** Flooding or equipment damage can result in the loss of important records and data stored in government buildings. This can have legal and operational implications.
- **Budgetary Impact:** The costs associated with repairing and restoring government buildings and infrastructure after severe thunderstorms can strain budgets.

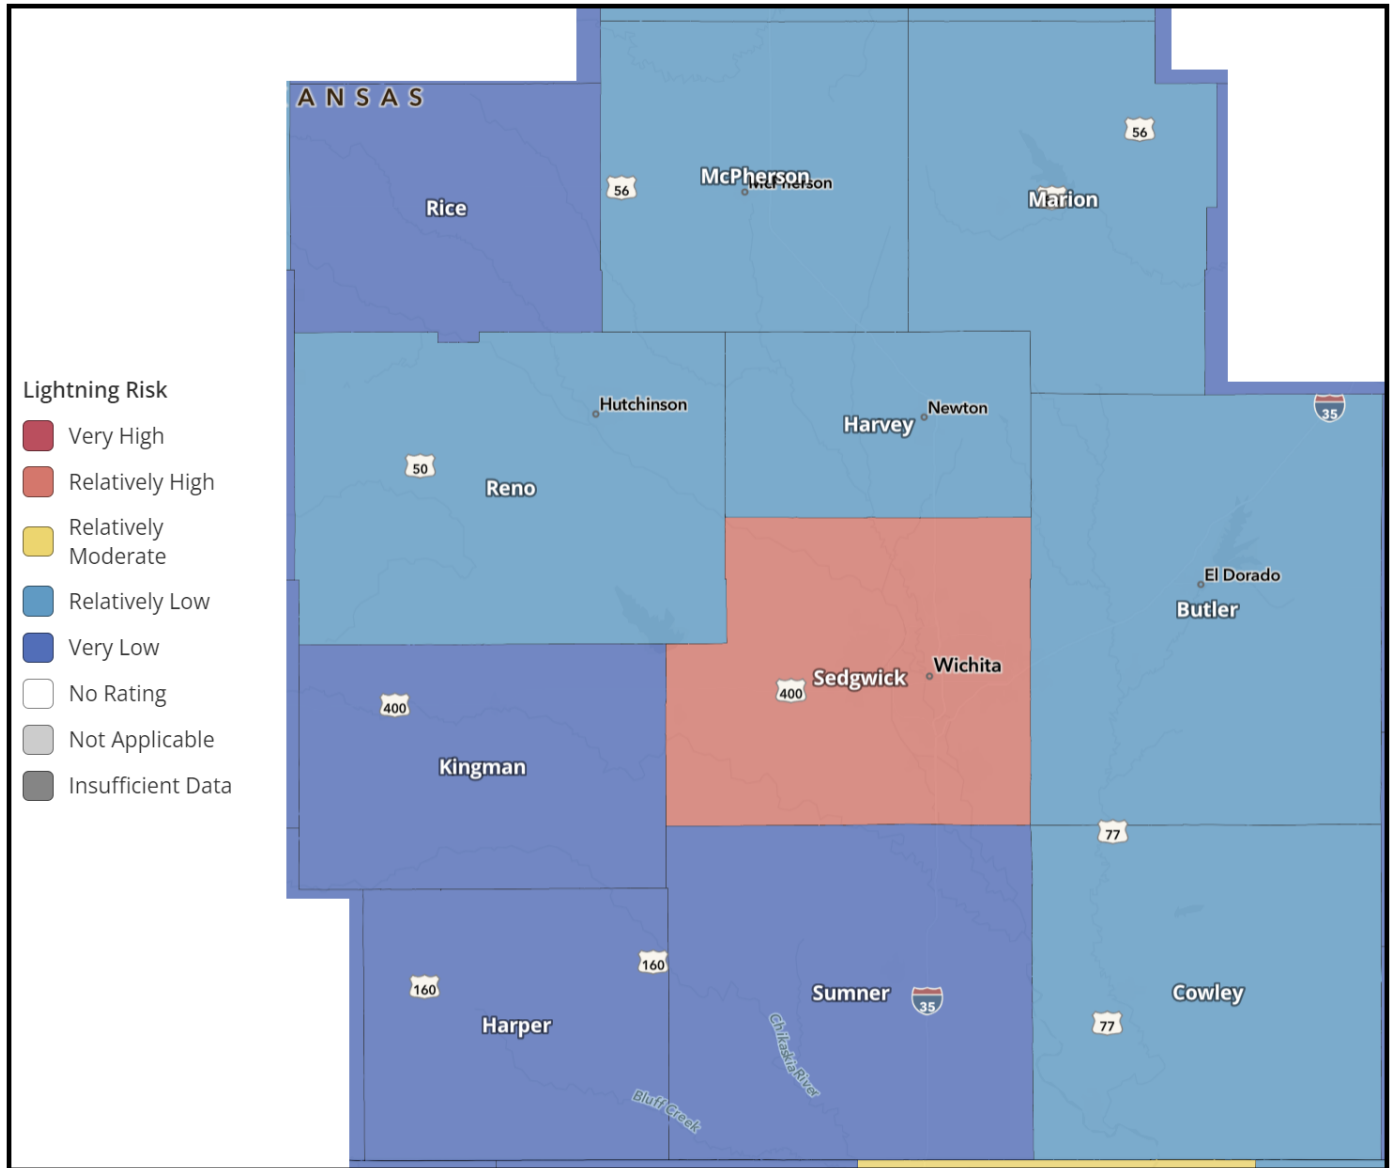

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating counties from the components of severe thunderstorms (hail, lightning, and strong winds):

**Map X: Kansas Region G FEMA NRI Hail Risk**

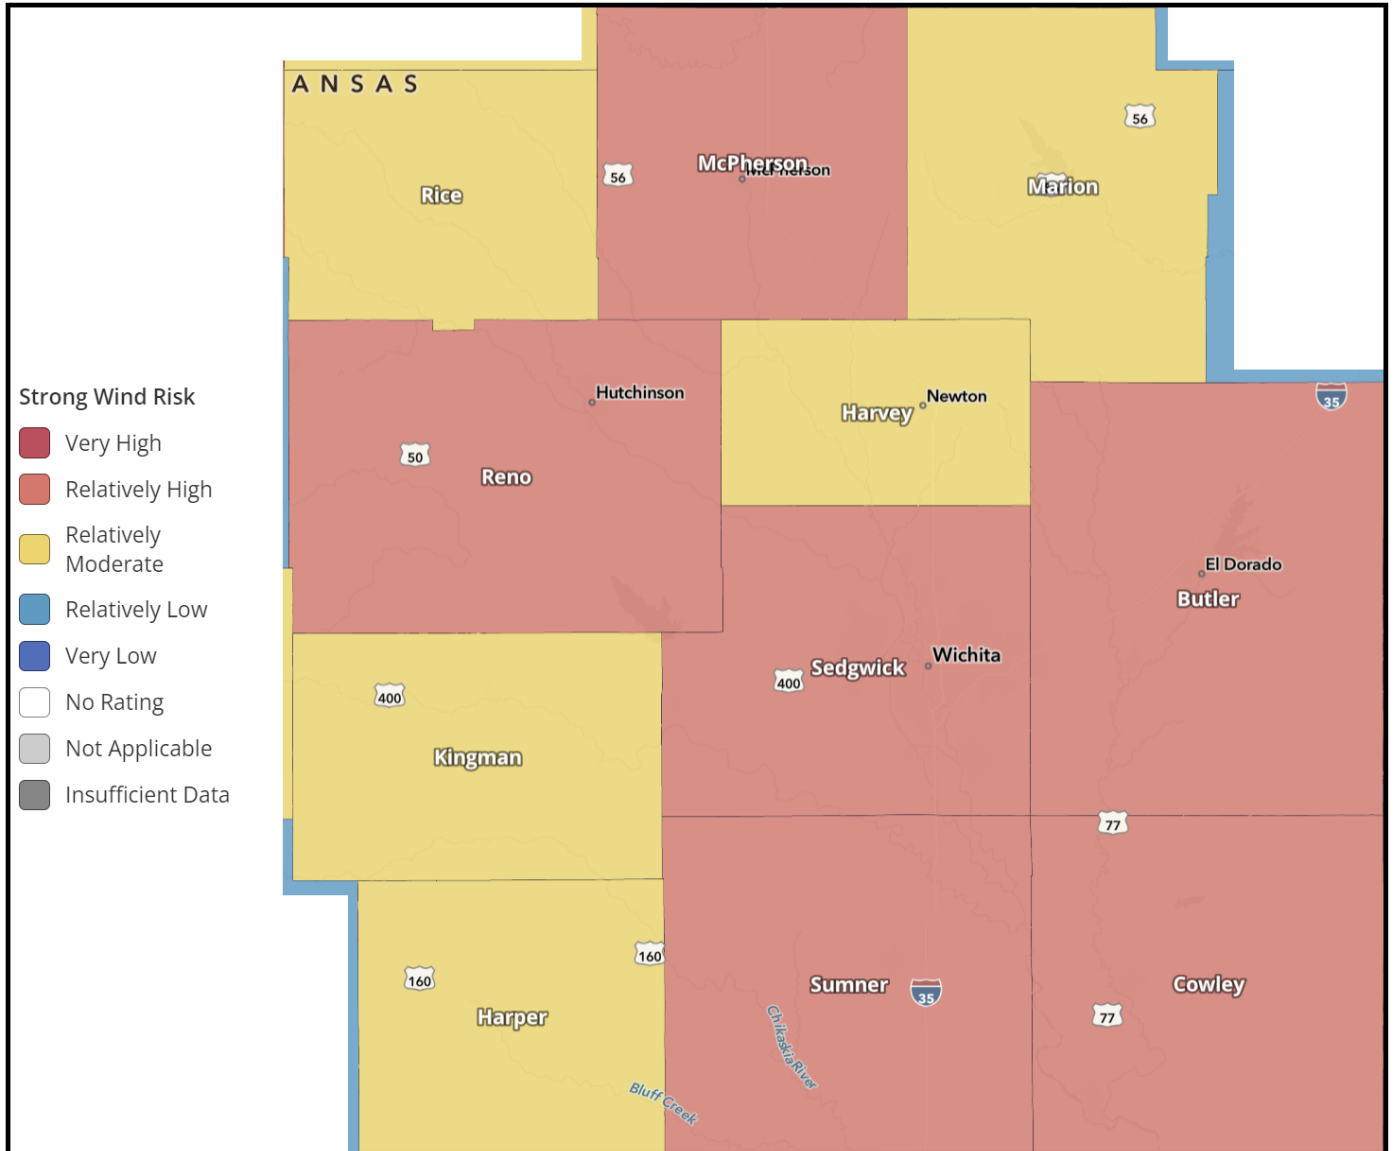

Source: FEMA NRI

**Map X: Kansas Region G FEMA NRI Lightning Risk**

Source: FEMA NRI

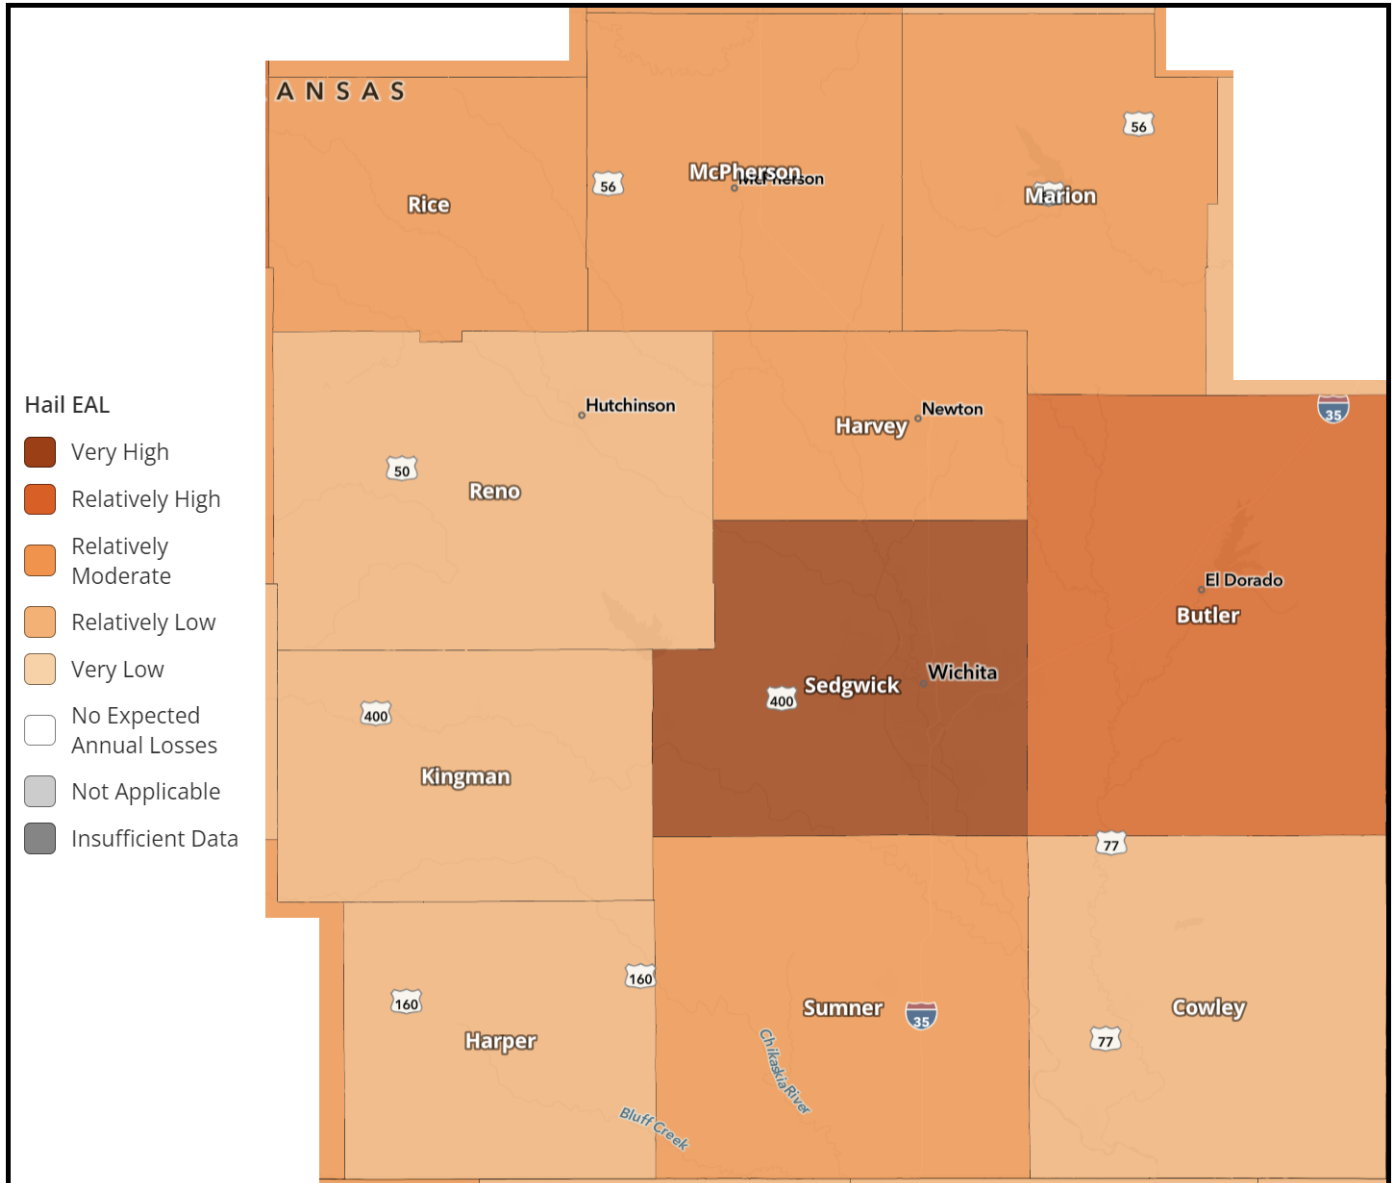

**Map X: Kansas Region G FEMA NRI Strong Wind Risk**

Source: FEMA NRI

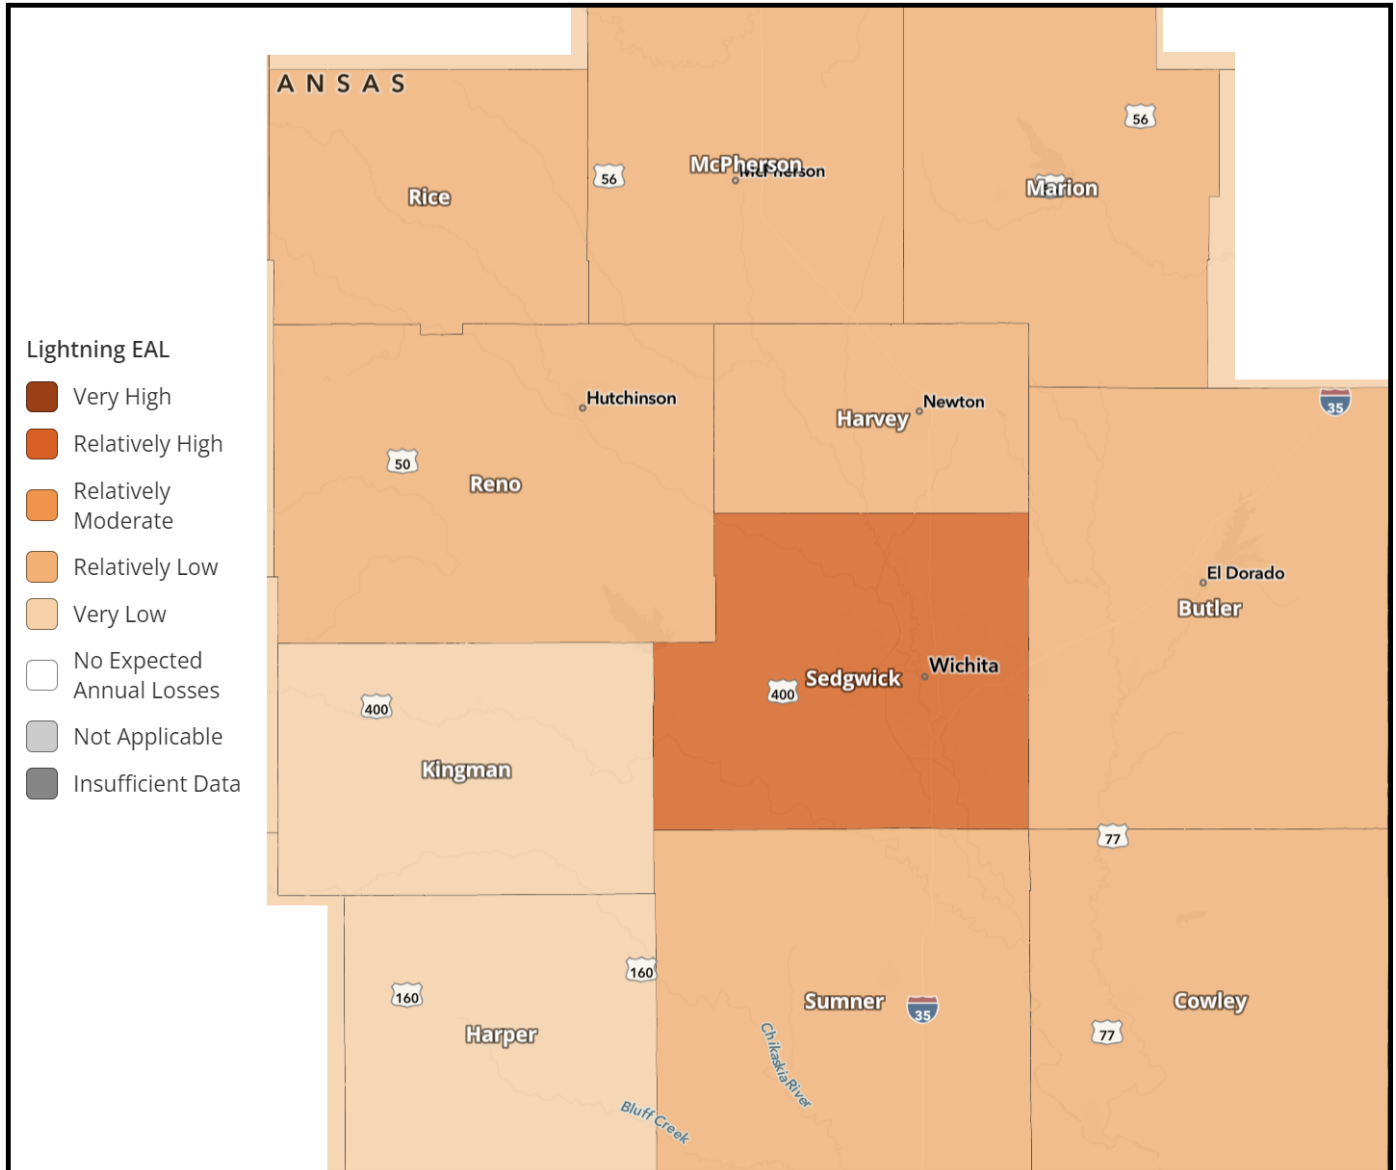

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for the components of severe thunderstorms (hail, lightning, and strong winds) for participating counties within Kansas Region G:

**Map X: Kansas Region G FEMA NRI Hail EAL**

Source: FEMA NRI

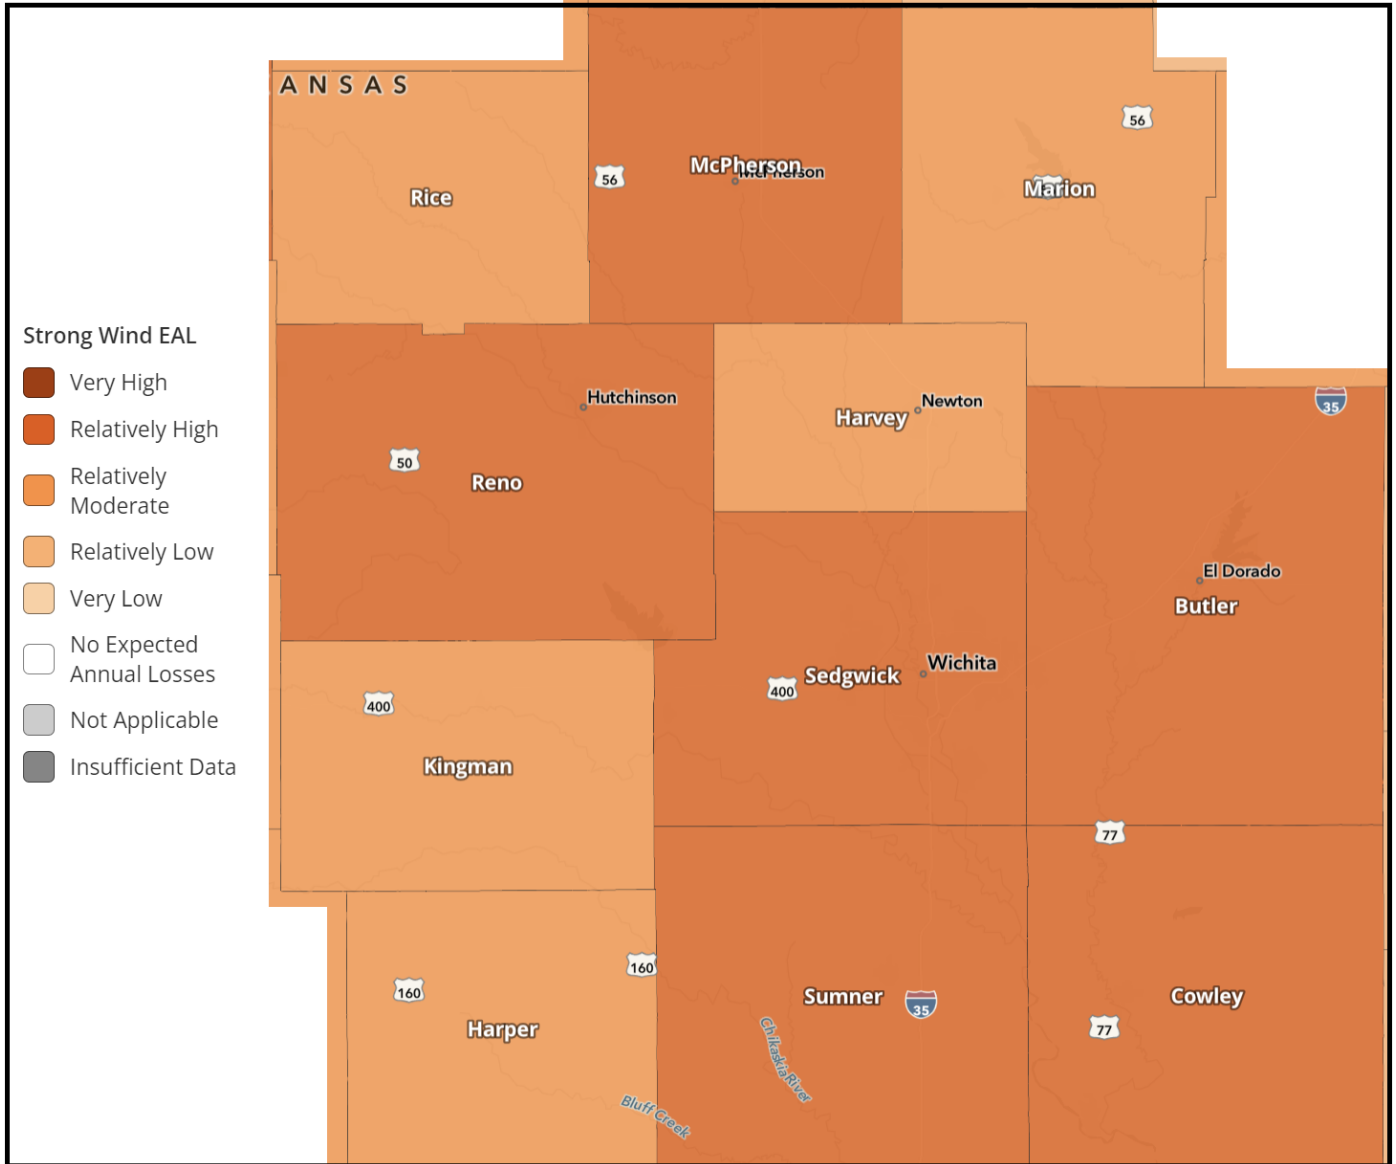

**Map X: Kansas Region G FEMA NRI Lightning EAL**

Source: FEMA NRI

**Map X: Kansas Region G FEMA NRI Strong Wind EAL**

Source: FEMA NRI

The following tables indicates the FEMA NRI and EAL analysis for each participating Kansas Region G county for extreme heat and extreme cold:

**Table X: Kansas Region G FEMA NRI and EAL for Hail by County**

County	Risk Index	EAL
Butler	Relatively Moderate	Relatively High
Cowley	Very Low	Very Low
Harper	Relatively Low	Very Low
Harvey	Relatively Moderate	Relatively Low
Kingman	Relatively Low	Very Low
Marion	Relatively Moderate	Relatively Low
McPherson	Relatively Moderate	Relatively Low
Reno	Relatively Low	Very Low
Rice	Relatively Moderate	Relatively Low
Sedgwick	Relatively High	Very High
Sumner	Relatively Moderate	Relatively Low

**Consequence Analysis**

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Severe Thunderstorm Consequence Analysis**

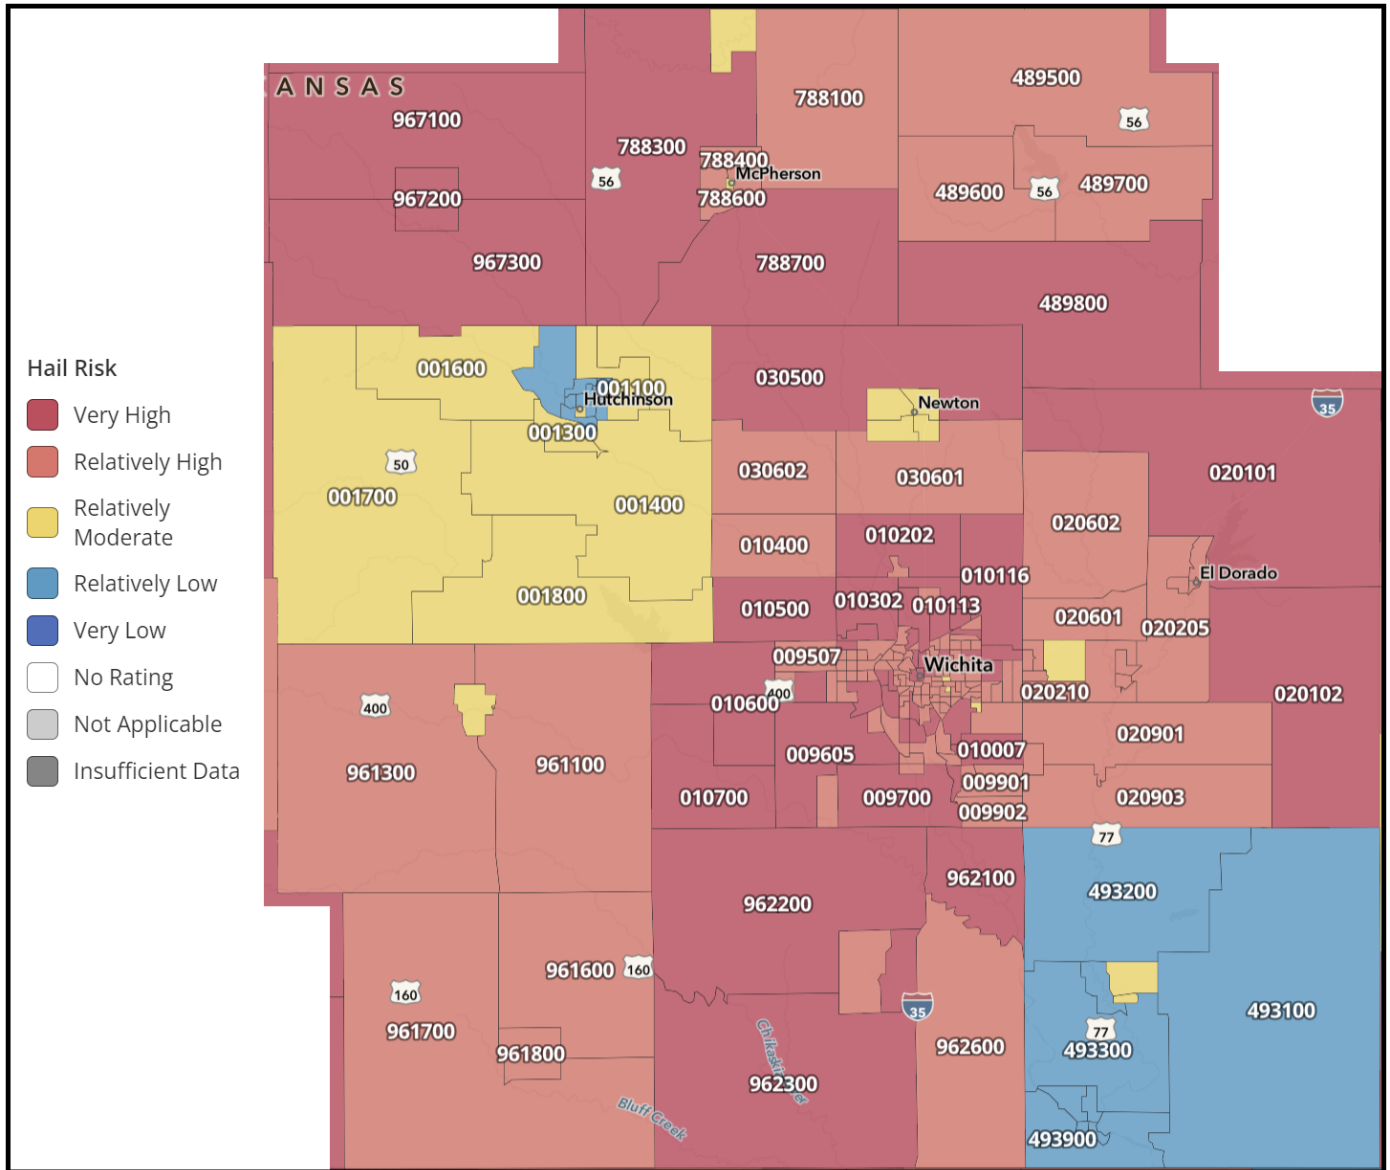

<b>Subject</b>	<b>Potential Impacts</b>
Impact on the Public	Thunderstorms can cause extensive property damage, loss of utility service, and injury to the public. Those most at-risk are low-income and homeless individuals without proper shelter.
Impact on Responders	First responders may be unable to access roadways due to flooding, trees, or debris. Exposure to lightning, flooding, and high winds may cause injuries to first responders. Vehicles and resources may be damaged, leading to impaired response activities. In addition, road conditions may become hazardous as a result of the by-products
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. Severe thunderstorms may impact an agency's ability to maintain continuity of operations due to power outages, flooding, and wind damage. If the activation of alternate facilities was required, travel may be difficult as well as computer/network access due to long-term power outages caused by thunderstorms.
Delivery of Services	Delivery of services may be impaired by flooding, obstruction, and damage to roadways and resources. The ability to deliver goods and services will be impacted locally, regionally, or statewide depending on the magnitude of the event. Goods, equipment, and vehicles may become damaged during transport.
Property, Facilities, and Infrastructure	Power lines and power generators are most at risk from thunderstorms and impacts could result in isolated power outages or full-scale blackouts. Building and vehicle damage can occur from hail and other debris created by thunderstorms. Properties and critical facilities also may face foundational and physical damage due to flooding, lightning strike, or excessive winds, delaying response and recovery operations.
Impact on Environment	Waste and debris from damage treatment infrastructure or hazardous materials facilities could contaminate sources of water and food. Debris can impact and contaminate wildlife and natural areas. Lightning strikes may also ignite fires, leading to destruction of agricultural crops, critical ecosystems, and natural habitats.
Economic Conditions	Flooding, high winds, lightning, and hail can stress state and local resources. Even if some of the costs can be recouped through federal reimbursements (federal disaster declaration), there is a fiscal impact on the local government.
Public Confidence in Governance	Ineffective thunderstorm response can decrease the public's confidence in the ability to respond and govern. Governmental response across local, state, regional, and federal levels require direct actions that must be immediate and effective to maintain public confidence.

#### 4.14.7 Jurisdictional Risk and Vulnerability

To help understand the risk and vulnerability to earthquakes of participating jurisdictions mapping from the FEMA NRI was run on a census tract level. As the NRI does not generate mapping for individual jurisdictions, census tract analysis is the closest analogue available to understand individual jurisdiction conditions.

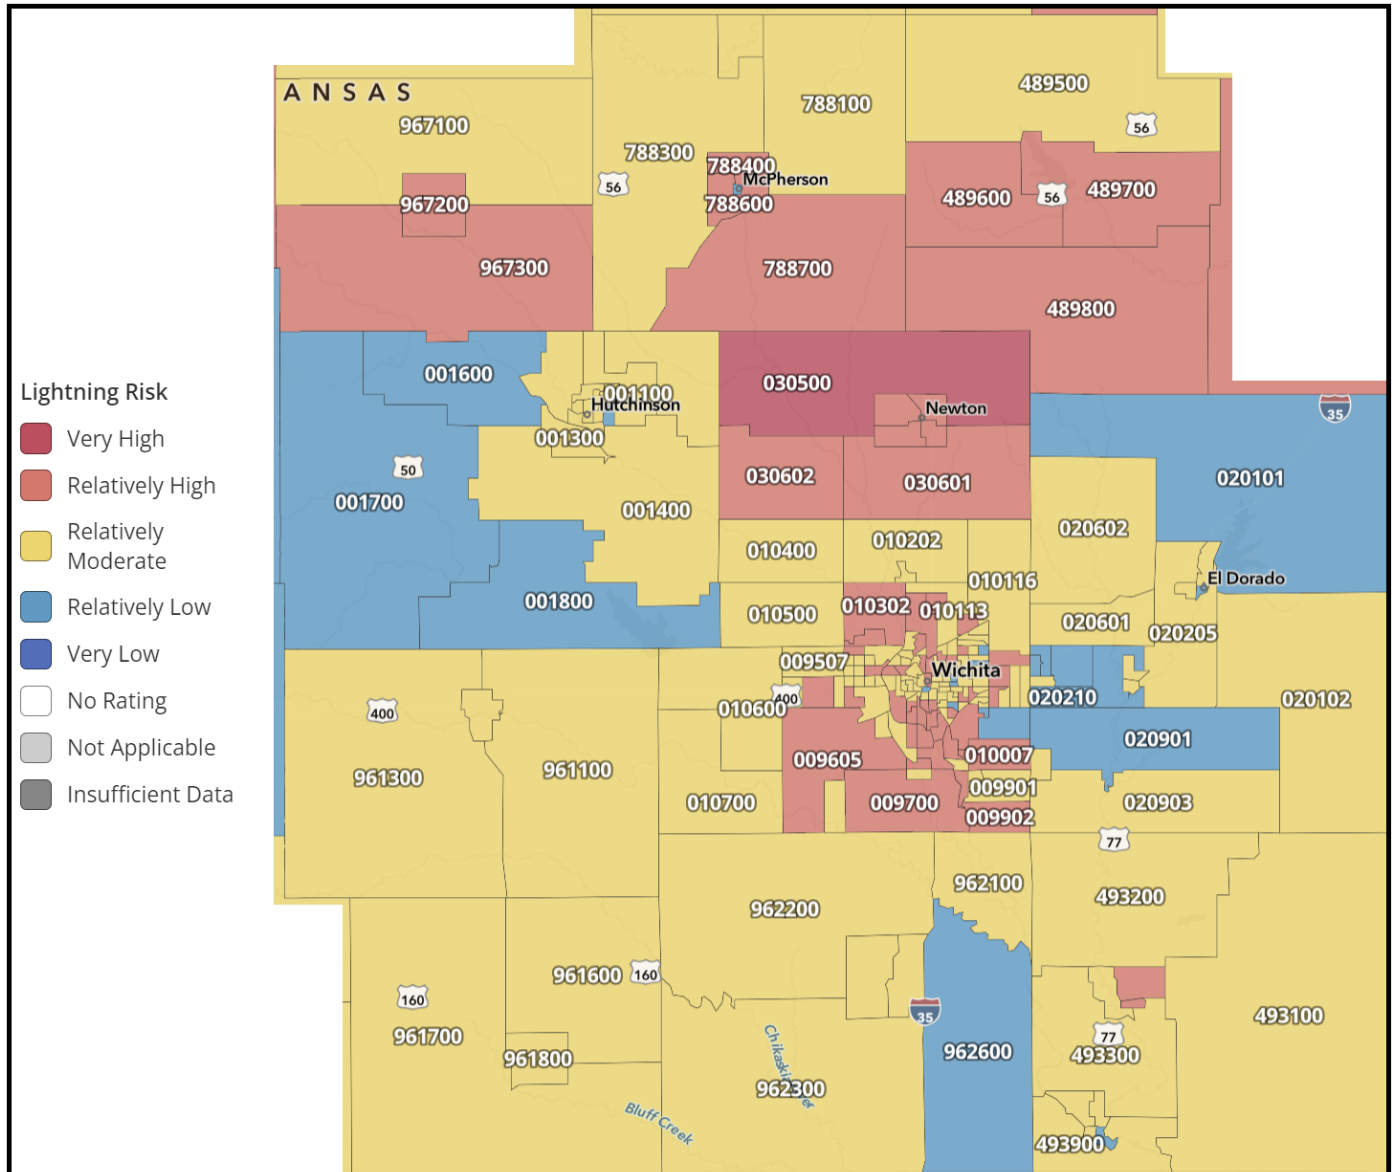

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating jurisdictions (as indicated by census tract) from the components of severe thunderstorms (hail, lightning, and strong winds):

**Map X: FEMA NRI Jurisdictional Hail Risk**

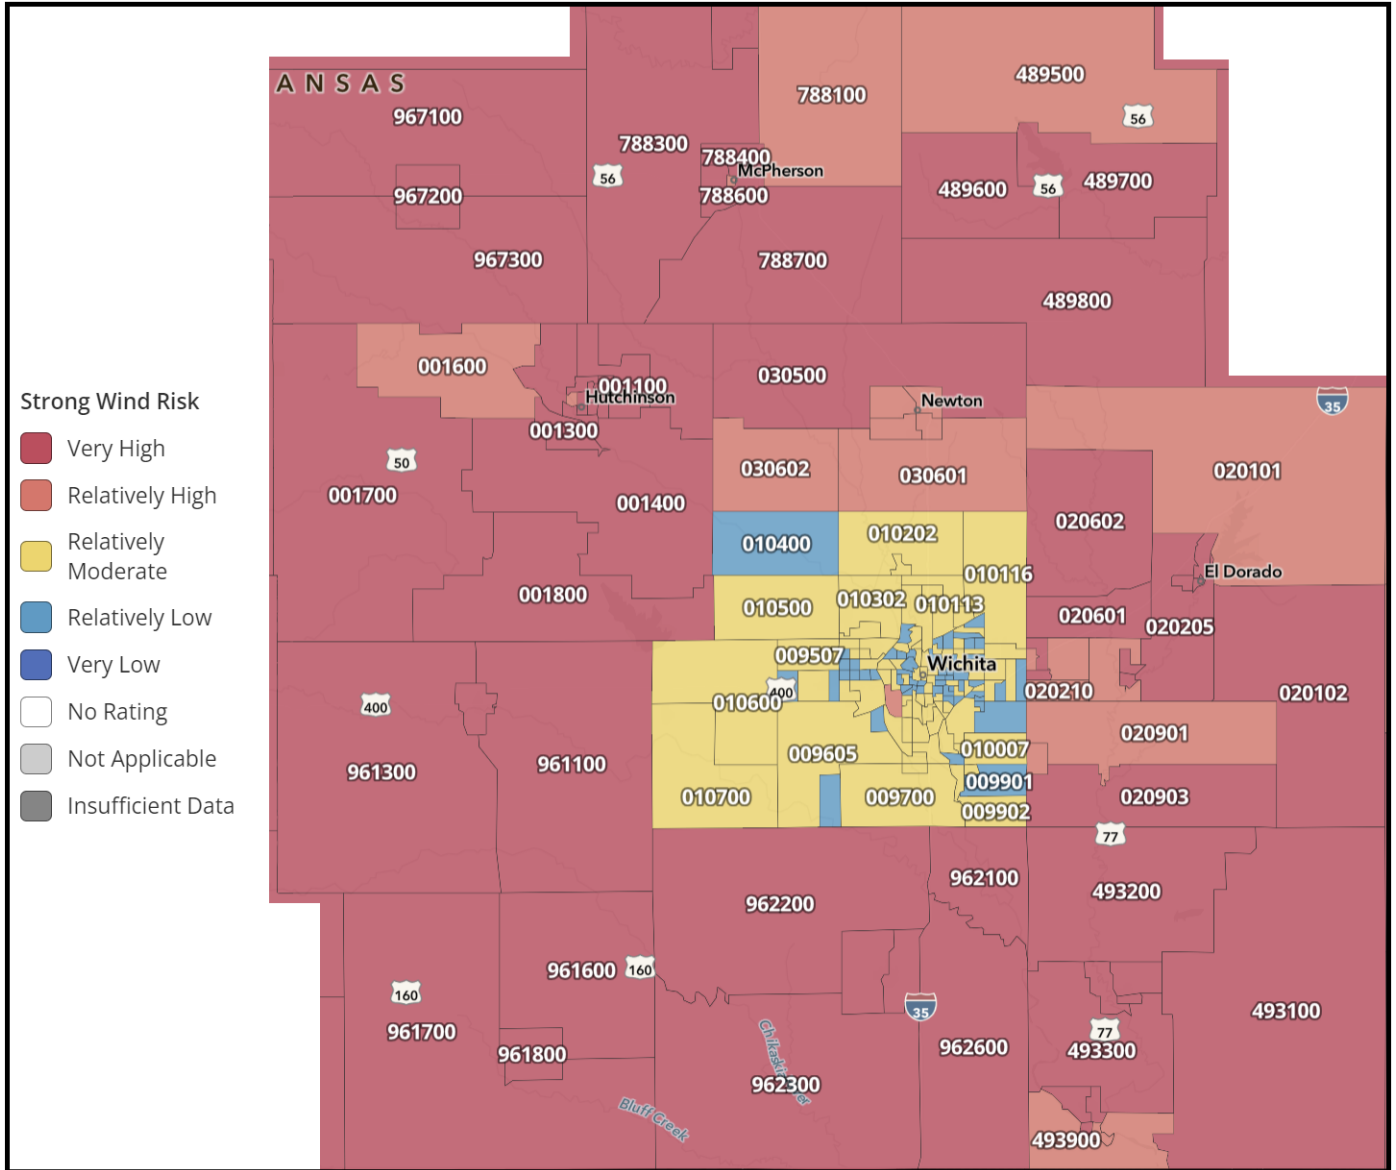

Source: FEMA NRI

**Map X: FEMA NRI Jurisdictional Lightning Risk**

Source: FEMA NRI

**Map X: FEMA NRI Jurisdictional Strong Wind Risk**

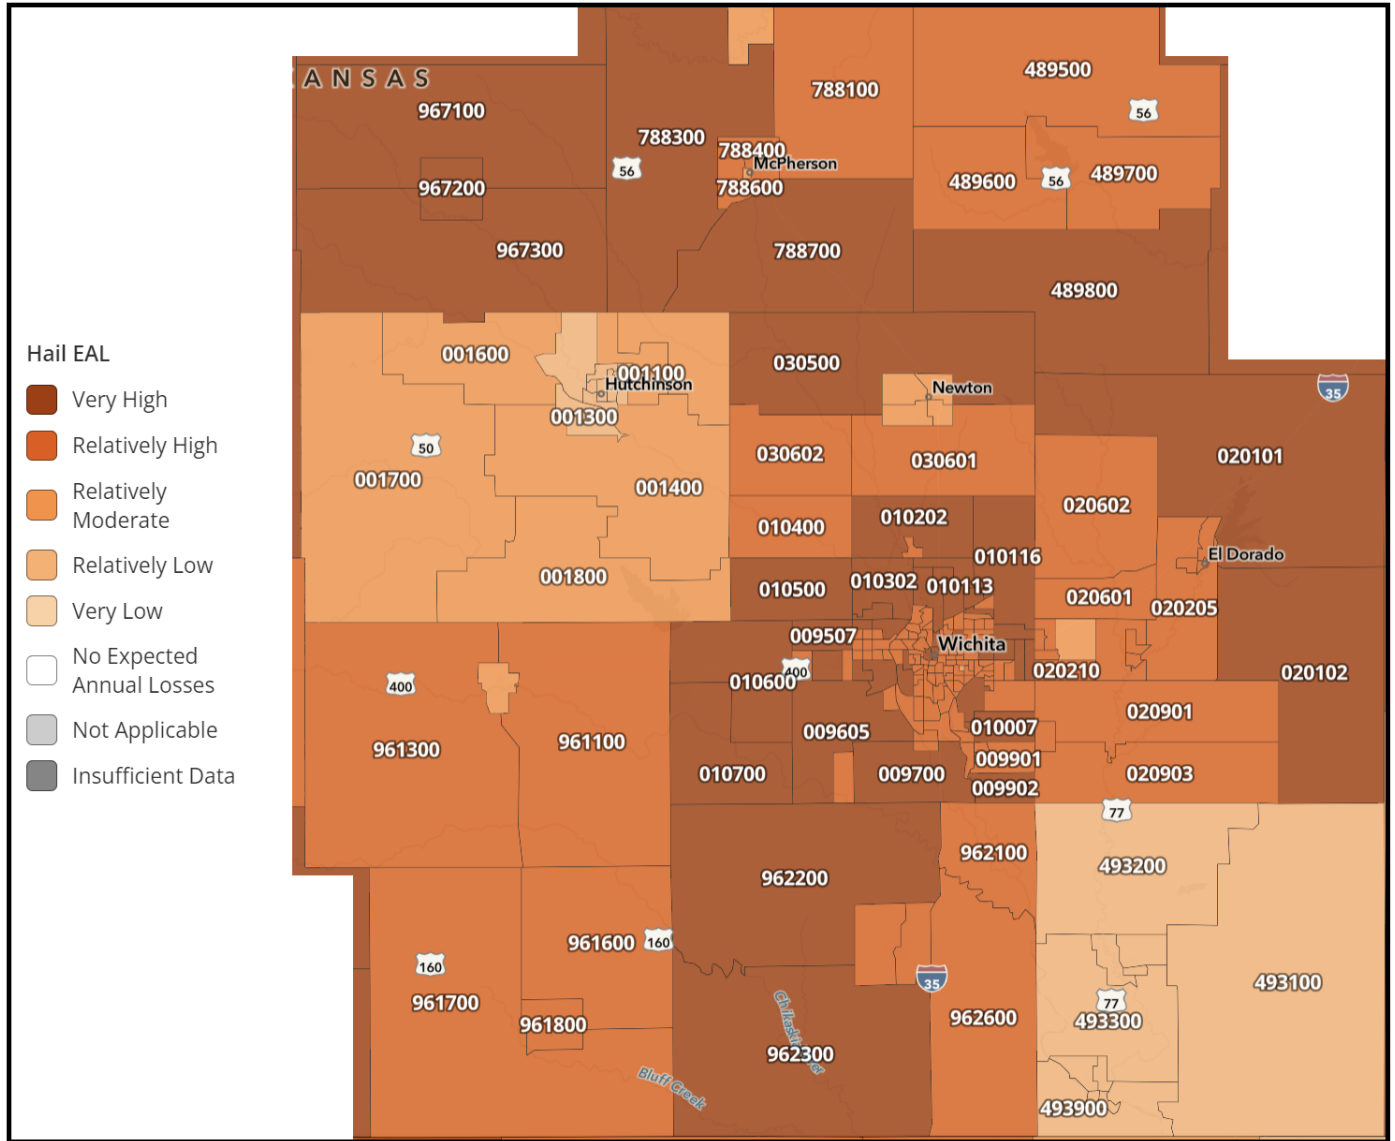

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for the components of severe thunderstorms (hail, lightning, and strong winds) for participating jurisdictions (as indicated by census tract) within Kansas Region G:

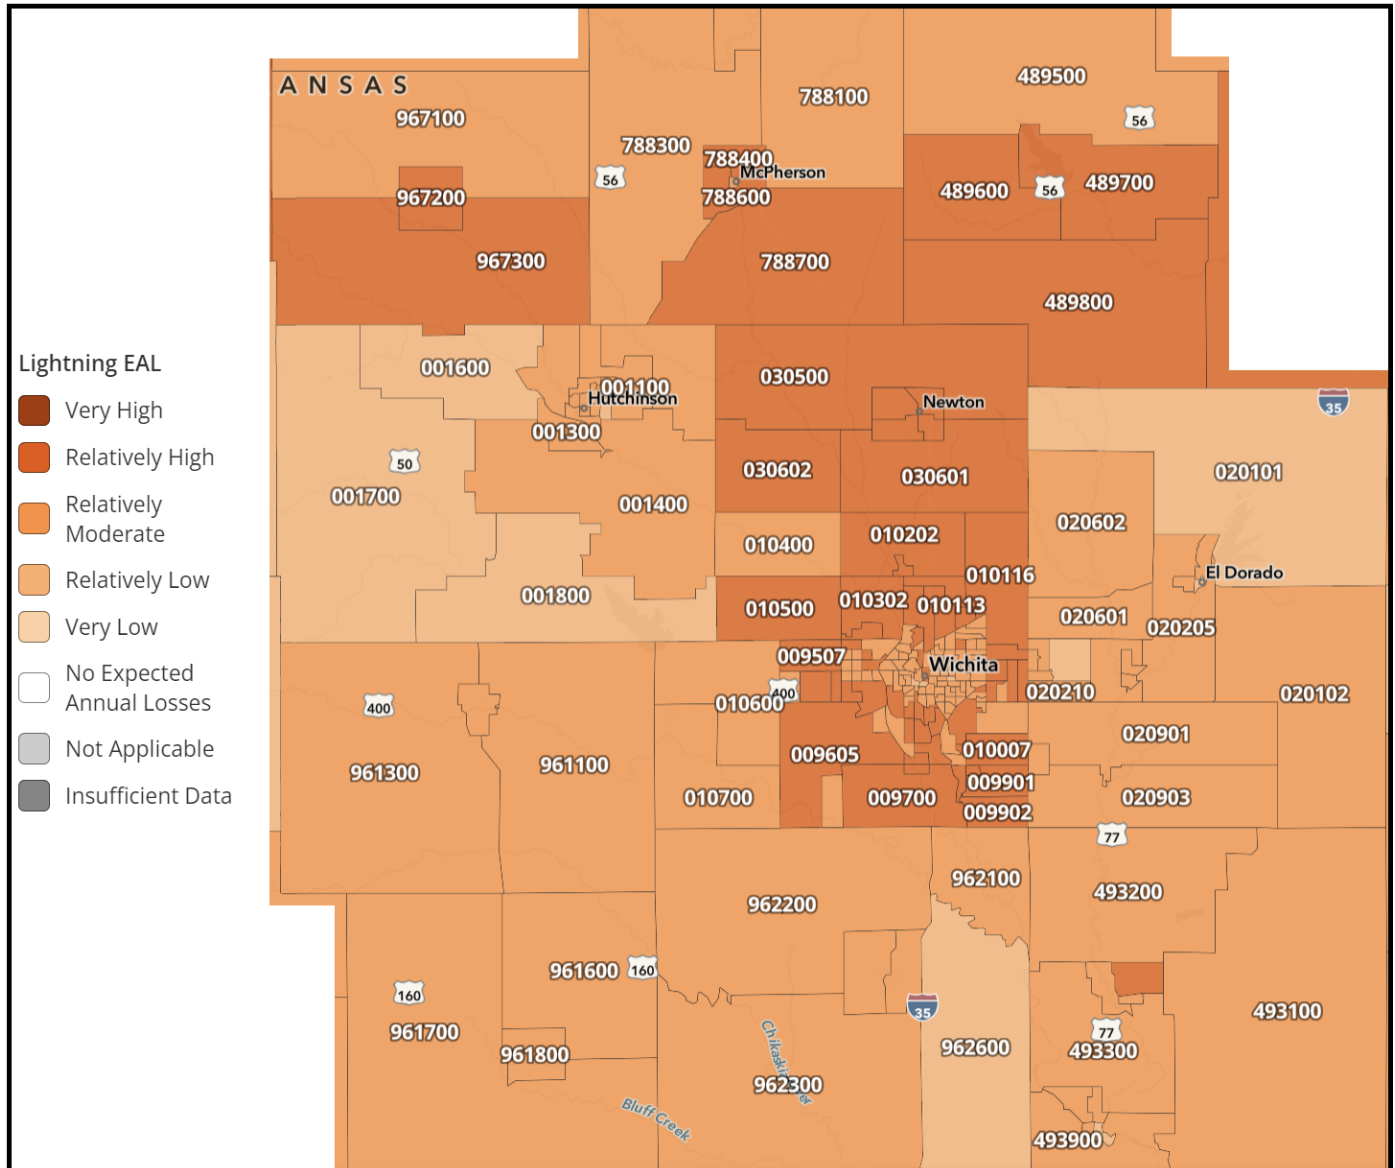

**Map X: FEMA NRI Jurisdictional Hail EAL**

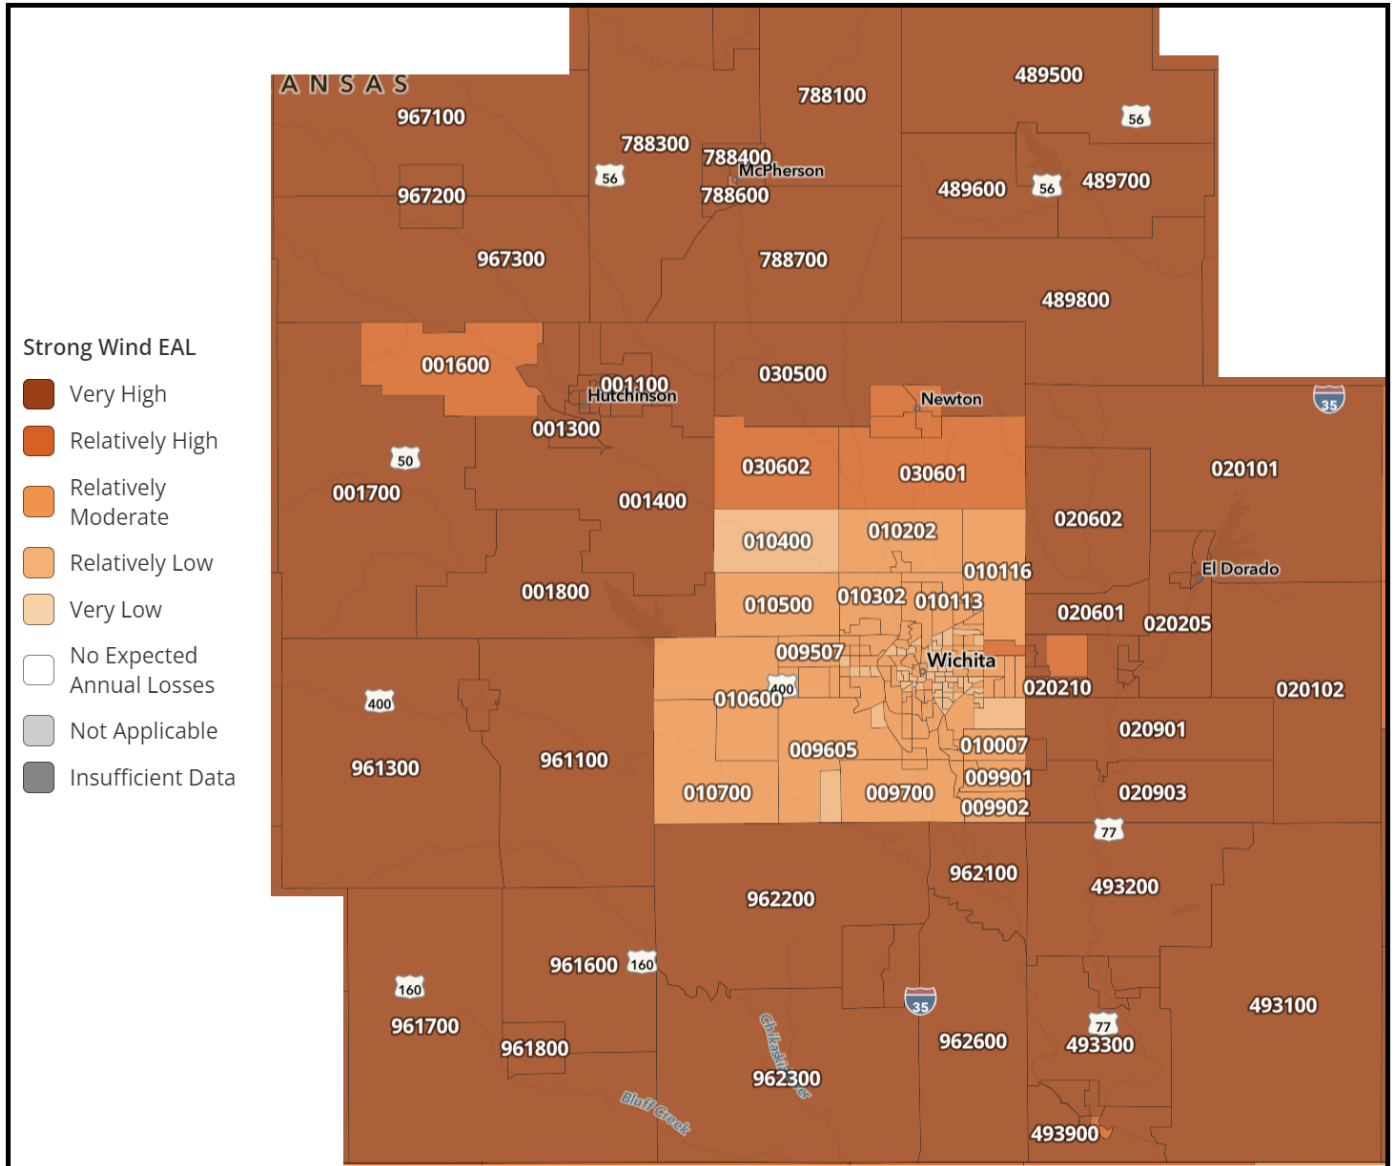

Source: FEMA NRI

**Map X: FEMA NRI Jurisdictional Lightning EAL**

Source: FEMA NRI

**Map X: FEMA NRI Jurisdictional Strong Wind EAL**

Source: FEMA NRI

## 4.15 Severe Winter Weather

### 4.15.1 Hazard Description

A winter storm encompasses multiple effects caused by winter weather. Included are strong winds, ice storms, heavy or prolonged snow, sleet, and extreme temperatures. Winter storms can be increasingly hazardous in areas and regions that only see winter storms intermittently.

This plan defines winter storms as a combination of the following winter weather effects as defined by NOAA and the NWS.

- **Ice Storm:** An ice storm is used to describe occasions when damaging accumulations of ice are expected during freezing rain situations. Significant accumulations of ice pull down trees and utility lines resulting in loss of power and communication, and make travel extremely dangerous. Significant ice accumulations are usually accumulations of ¼" or greater.
- **Heavy Snow:** This generally means snowfall accumulating to 4" or more in depth in 12 hours or less; or snowfall accumulating to 6" or more in depth in 24 hours or less.
- **Winter Storm:** Hazardous winter weather in the form of heavy snow, freezing rain, or heavy sleet. It may also include extremely low temperatures and increased wind.
- **Cold Wave/Extreme Cold:** As described by NWS, a cold wave is a rapid fall in temperature within a 24-hour period requiring substantially increased protection to agriculture, industry, commerce, and social activities. As evidenced by past incidents across the U.S., extreme cold can cause impact to human life and property.

### 4.15.2 – Location and Extent

Winter storms occur regularly throughout Kansas Region G. These events occur on a large geographic scale, often affecting multiple counties, regions, and states. Winter storms typically form with warning and are often anticipated. Like other large storm fronts, the severity of a storm is not as easily predicted and when it is, the window of notification is up to few hours to under an hour. Although meteorologists estimate the amount of snowfall a winter storm will drop, it is not known exactly how much snow will fall, whether or not it will form an ice storm, or how powerful the winds will be until the storm is already affecting a community. The following map from Kansas State University indicates that the average annual snowfall for Kansas Region G

Map X: Kansas Region G Normal Annual Snowfall

Source: NOAA

The Northeast Snowfall Impact Scale is a scale used to assess and rank the impact of snowfall events in the northeastern United States, but allows for an idea of intensity for Kansas Region G. It was developed by NOAA to provide a standardized way of measuring the societal and economic impacts of snowstorms. The scale takes into account factors such as snowfall amount, population density, and the area affected by the storm to determine its impact. The scale has five categories, each with its own associated impacts:

Table X: Snowfall Impact Scale		
Category	Description	Impacts
1	Notable	Light to moderate snowfall. Limited impacts on transportation and daily life. Typically localized to small areas.
2	Significant	Moderate to heavy snowfall. Widespread impacts on transportation, including delays and disruptions. Some school and business closures. Widespread power outages are rare.
3	Major	Heavy snowfall, often exceeding one foot or more. Significant transportation disruptions, including major highway closures. Widespread school and business closures. Power outages may occur, especially in areas with wet, heavy snow.
4	Crippling	Extreme snowfall, often exceeding two feet or more. Severe and prolonged transportation disruptions, including highway closures. Widespread school and business closures for an extended period. Widespread and prolonged power outages, especially in areas with ice accumulation.
5	Extreme	Exceptional snowfall, often exceeding three feet or more. Complete paralysis of transportation systems, including major highways and airports. Extended school and business closures. Widespread and prolonged power outages with significant damage to the electrical infrastructure.

Source: NOAA

The scale provides information for emergency management, public safety agencies, and the public to understand the potential impacts of a snowstorm and to prepare accordingly. It helps to quantify and communicate the severity of winter weather events, especially where snowfall can have a major impact on daily life and the economy.

Ice storms are characterized by the accumulation of freezing rain or freezing drizzle, which coats surfaces with a layer of ice. These storms can have significant impacts on transportation, infrastructure, and the environment. Ice storms occur when there's a layer of warm air above a layer of cold air near the surface. Precipitation falls as rain in the warm layer and then freezes upon contact with surfaces at or below freezing temperatures in the cold layer. The most common type of precipitation during an ice storm is freezing rain. This is rain that falls as a liquid but freezes upon contact with cold surfaces, forming a layer of ice.

The Sperry–Piltz Ice Accumulation Index is an ice accumulation and ice damage prediction index that, when combined with NWS data, predicts the projected footprint, total ice accumulation, and resulting potential damage from approaching ice storms.

**Figure X: Sperry–Piltz Ice Accumulation Index**

ICE DAMAGE INDEX	DAMAGE AND IMPACT DESCRIPTIONS
<b>0</b>	Minimal risk of damage to exposed utility systems; no alerts or advisories needed for crews, few outages.
<b>1</b>	Some isolated or localized utility interruptions are possible, typically lasting only a few hours. Roads and bridges may become slick and hazardous.
<b>2</b>	Scattered utility interruptions expected, typically lasting 12 to 24 hours. Roads and travel conditions may be extremely hazardous due to ice accumulation.
<b>3</b>	Numerous utility interruptions with some damage to main feeder lines and equipment expected. Tree limb damage is excessive. Outages lasting 1 – 5 days.
<b>4</b>	Prolonged & widespread utility interruptions with extensive damage to main distribution feeder lines & some high voltage transmission lines/structures. Outages lasting 5 – 10 days.
<b>5</b>	Catastrophic damage to entire exposed utility systems, including both distribution and transmission networks. Outages could last several weeks in some areas. Shelters needed.

Source: Sperry–Piltz Ice Accumulation Index

#### 4.15.3 Previous Occurrence

The following table presents NCEI identified ice storm and winter storm events and the resulting damage totals in Kansas Region G from 2009 to 2023. This data is presented regionally as these storms tend to cover large areas.

**Table X: NCEI Kansas Region G Winter Storm Events**

Region	Event Type	Number of Days with Events	Property Damage	Deaths and Injuries
Kansas Region G	Blizzard	4	\$2,620,000	0
	Ice Storm	5	\$5,600,000	0
	Winter Storm	31	\$12,829,000	0

Source: NCEI

It is worth noting that damage estimates indicated by the NCEI are often artificially low. This underreporting is a result of the way the events are reported to the NCEI, often by the local and/or NWS office. When reporting an event oftentimes the NWS office does not have access to the actual damage assessment resulting from that event. As such, the report often details a very low amount or zero-dollar amount for damages. Additionally, deaths and injuries may be underreported as they may be a result of a concurrent event, such as a person driving unsafely during heavy rain and passing away.

#### 4.15.4 Probability of Future Events

Predicting the probability of winter storm occurrences is tremendously challenging due to the large number of factors involved and the random nature of formation. Data from NOAA and the NWS indicate that Kansas Region G can expect an average annual snowfall of between two to 15 inches per year.

Based on historical occurrences, Kansas Region G will continue to experience severe winter storm events on an annual basis. The following table, using data from the NCEI, indicates the yearly probability of a severe winter storm event, the number of deaths or injuries, and estimated property damage for each county in Kansas Region G.

**Table X: Kansas Region G NCEI Severe Winter Storm Event Probability Summary**

Event Type	Days with Event	Average Events per Year	Deaths / Injuries	Average Deaths / Injuries per Year	Property Damage	Average Property Damage per Year
Blizzard	4	<1	0	0	\$2,620,000	\$174,667
Ice Storm	5	<1	0	0	\$5,600,000	\$373,333
Winter Storm	31	2	0	0	\$12,829,000	\$855,267

Source: NCEI

#### 4.15.5 Projected Changes in Location, Intensity, Frequency, and Duration

Climate change can lead to greater variability in precipitation patterns. In Kansas Region G, this may result in more erratic winter storms with periods of heavy snowfall followed by rain or freezing rain. These mixed precipitation events can make winter storms more challenging to predict and can lead to a greater risk of ice accumulation. Additionally, Kansas Region G may experience milder winters as average temperatures rise due to climate change. While this could lead to a decrease in the frequency of traditional snowstorms, it may also increase the likelihood of winter storms that produce mixed precipitation, including freezing rain and sleet. Warmer temperatures can lead to a higher snowfall threshold, meaning that storms that would have produced snow in the past may now bring more rain or a mix of precipitation types. This can affect the accumulation of snow in the state. Changes in atmospheric circulation patterns associated with climate change can influence the tracks of winter storms. This could lead to a shift in the amounts of heavy snowfall, ice, and other winter weather hazards in Kansas Region G.

#### 4.15.6 Vulnerability and Impact

All of Kansas Region G is vulnerable to winter and ice storms. Based on the non-geographic specific aspect of this hazard, i.e., no one area is at a greater risk, all of the planning area's structural inventory and population is vulnerable.

Extremely cold temperatures are a threat to anyone exposed to them. Extreme cold can cause frostbite and hypothermia. Bitterly cold temperatures can also burst water and create an excessive demand on providers to deliver energy for household heating. There are also fire dangers associated with home heating. Heavy snow and/or ice can paralyze communities. Roads can become hazardous which may cause accidents, disrupted flow of supplies, and challenges in the delivery of emergency and medical services. Additional impacts on people and the community may include:

- **Injuries and Fatalities:** Slippery sidewalks, roads, and driveways can lead to slip and fall accidents, vehicle crashes, and pedestrian injuries. Exposure to extreme cold temperatures can cause frostbite, hypothermia, and cold-related illnesses, which can be life-threatening.
- **Power Outages:** Heavy snow, ice, and freezing rain can bring down power lines and disrupt electricity supply. Power outages can lead to heating and lighting challenges, particularly in extreme cold conditions.
- **Transportation Disruptions:** Winter storms can make roads and highways treacherous, leading to travel delays, accidents, and stranded motorists. Public transportation services may be disrupted, affecting commuters and essential travel.
- **Stranded or Isolated Communities:** Severe winter weather can leave communities isolated and cut off from emergency services and supplies. Residents may need to shelter in place or rely on local resources until conditions improve.
- **Health Risks:** Exposure to extreme cold can lead to a range of health risks, including frostbite, hypothermia, and cold-related illnesses. Individuals with pre-existing health conditions may face exacerbated risks.
- **Increased Heating Costs:** Cold weather can result in higher heating costs, which can be a financial burden for many households. Low-income individuals and families may struggle to afford adequate heating.
- **Disruption of Essential Services:** Severe winter weather can disrupt essential services such as healthcare, emergency response, and utilities. Hospitals may face increased patient volumes due to weather-related injuries and illnesses.

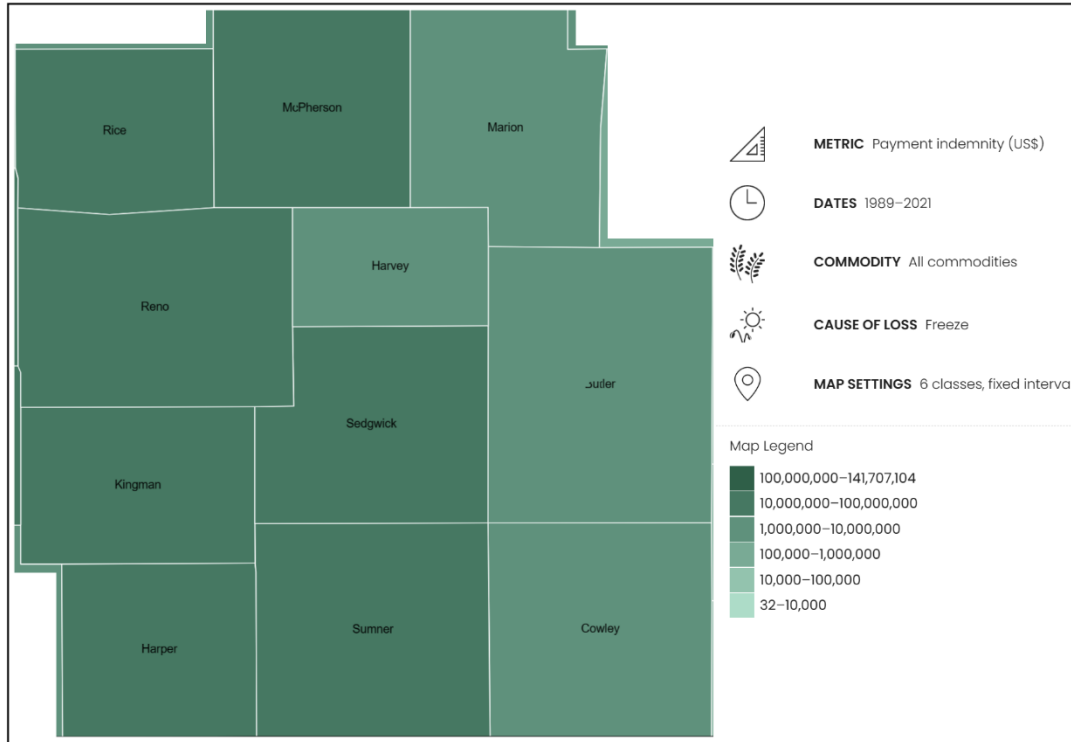

Severe winter storms can have significant and wide-ranging impacts on critical facilities and infrastructure. The extent of the impact depends on the severity of the storm, the preparedness of the facilities and infrastructure, and the effectiveness of response and recovery efforts, and may include:

- **Power Outages:** Severe winter storms can cause power outages by bringing down power lines, causing ice accumulation on electrical infrastructure, or overloading the electrical grid due to increased demand for heating. Critical facilities such as hospitals, emergency response centers, and data centers may rely on backup generators to maintain essential operations during outages.
- **Communication Disruptions:** Ice and freezing rain can damage communication infrastructure, including cell towers, telephone lines, and data centers, leading to disruptions in phone and internet services. This can hinder emergency communication and coordination, affecting critical response efforts.
- **Transportation Disruptions:** Snow and ice accumulation on roads, runways, and railways can disrupt transportation networks, leading to travel delays, accidents, and closures. Critical facilities may face challenges in receiving essential supplies and personnel during and after the storm.
- **Healthcare System Strain:** Hospitals and healthcare facilities may experience increased demand for medical services, including those related to slips and falls, traffic accidents, and cold exposure.
- **Water Supply Interruptions:** Freezing temperatures can cause water pipes to burst, leading to water supply interruptions and damage to water infrastructure. Critical facilities such as hospitals and emergency response centers rely on a continuous supply of clean water for various purposes, including patient care and firefighting.
- **Wastewater Systems:** Cold temperatures can affect wastewater treatment plants, leading to potential operational disruptions and contamination risks.
- **Fuel Supply Disruptions:** Snow and ice can disrupt fuel supply chains, leading to shortages of gasoline, diesel, and heating oil. Critical facilities may rely on fuel for backup power generators and heating systems.
- **Property Damage:** Severe winter storms can result in property damage, including roof collapses due to heavy snow accumulation, ice damming, and frozen pipes.

Winter storms can have various impacts on the environment, particularly in regions prone to cold and snowy winters. These impacts can affect ecosystems, wildlife, and natural resources and can include habitat disruption, reduction of food sources, changes in migration patterns, and damage to foliage (especially if a spring storm). Additionally, the use of salt and de-icing chemicals on roads and sidewalks can have negative environmental impacts. These chemicals can find their way into nearby water bodies, leading to water pollution and harm to aquatic ecosystems. Snowmelt can also introduce pollutants from roadways and urban areas into rivers and streams, leading to reduced water quality. Elevated sediment levels and changes in water temperature can also affect aquatic life.

Severe winter weather conditions can cause significant agricultural impacts. The following map from the United States Department of Agriculture details total agricultural losses, by county, due to freeze events from 1989 to 2021:

**Map X: Agricultural Losses Due to Freeze Events, 1989 to 2021**

Source: USDA

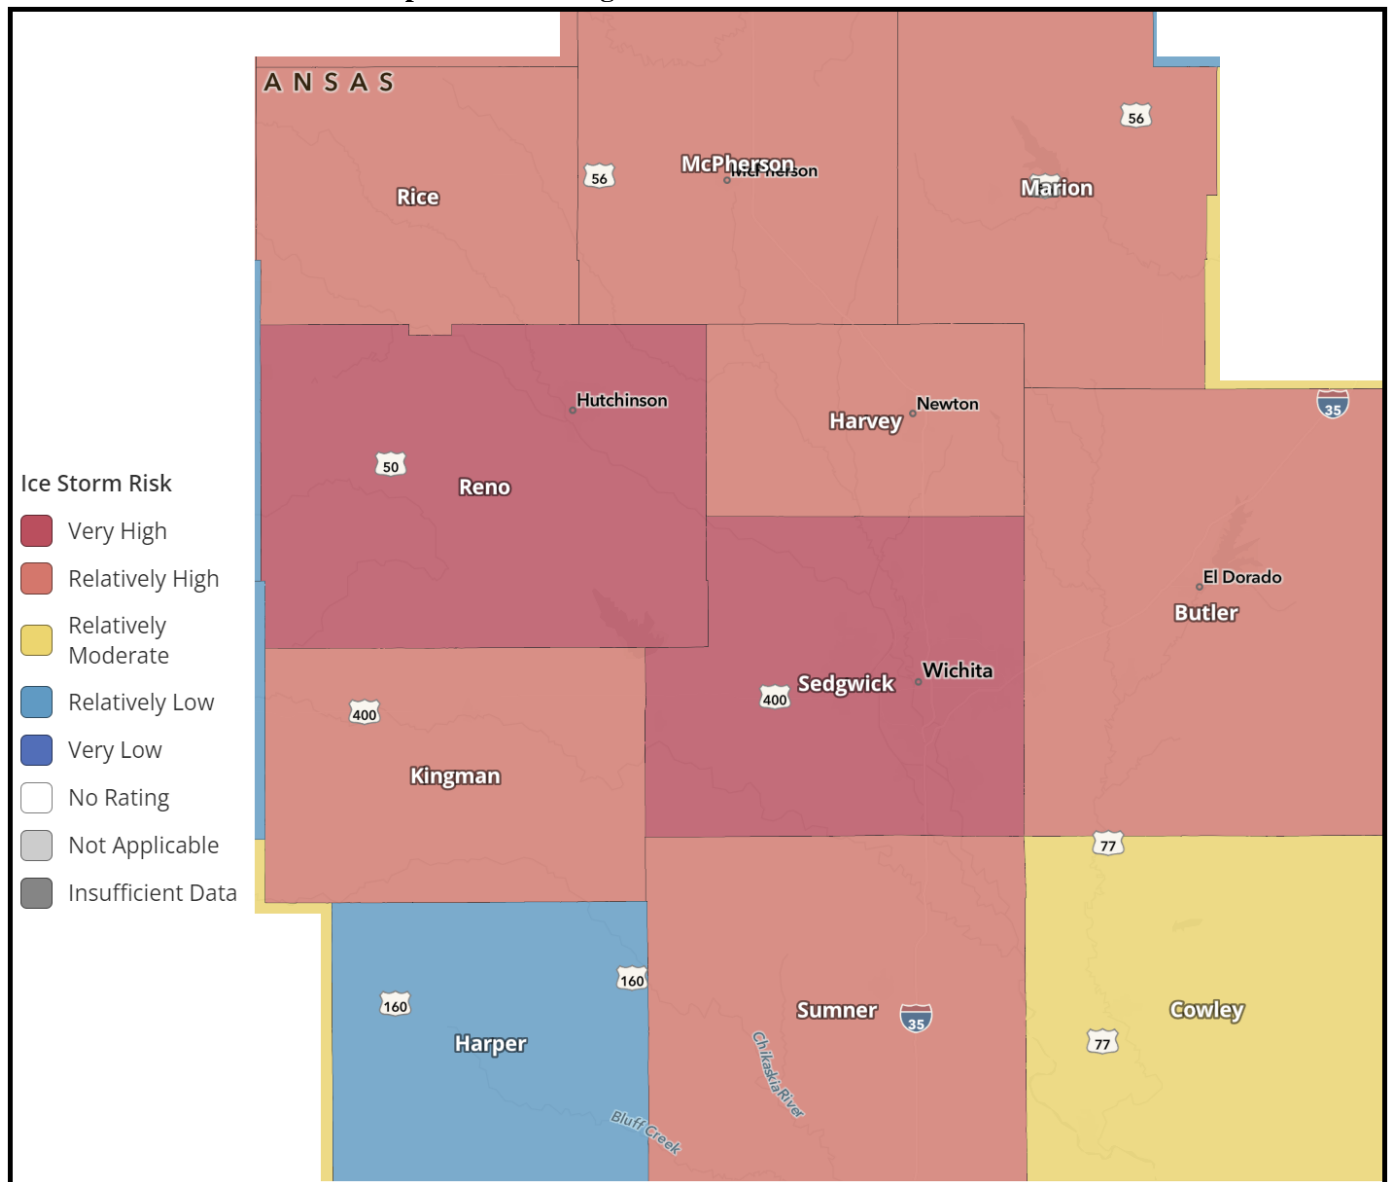

Severe winter weather can pose risks to local operations and facilities, and can disrupt government functions, damage critical infrastructure, and strain resources. Some of the risks to operations and facilities include:

- **Transportation Disruptions:** Snow and ice accumulation on roads and highways can hinder transportation, making it difficult for state agencies and personnel to travel and respond to emergencies. RIDOT must allocate resources to plow and salt roads, clear snow and ice, and repair potholes caused by freezing and thawing. These efforts are costly and resource intensive.
- **School Closures:** Winter storms often lead to school closures, which can affect state-run education programs and services. State agencies may need to coordinate with school districts to ensure the safety of students.
- **Emergency Response and Public Safety:** Winter storms can result in increased demands for emergency services, including responses to traffic accidents, medical emergencies, and stranded motorists. State and local agencies must allocate additional resources to address these needs.
- **Economic Impact:** Winter storms can result in economic losses due to reduced economic activity, transportation disruptions, property damage, and increased spending on emergency response and recovery efforts.
- **Emergency Shelter Operations:** Local jurisdictions may need to operate or coordinate emergency shelters during winter storms to provide shelter and resources to vulnerable populations, including those experiencing homelessness.
- **Resource Allocation:** State agencies must allocate resources, including personnel, equipment, and stockpiled supplies, to support emergency response efforts and maintain public services.
- **Communication Challenges:** Winter storms can disrupt communication networks, hindering the ability of state agencies to communicate internally and with the public. This can impact emergency notifications and coordination efforts.
- **Budgetary Impact:** The costs associated with snow removal, road maintenance, emergency response efforts, and infrastructure repair can strain state budgets.

- **Governance and Administrative Challenges:** Government offices and facilities may experience closures or reduced staffing during severe winter weather, affecting administrative functions, regulatory processes, and public services.

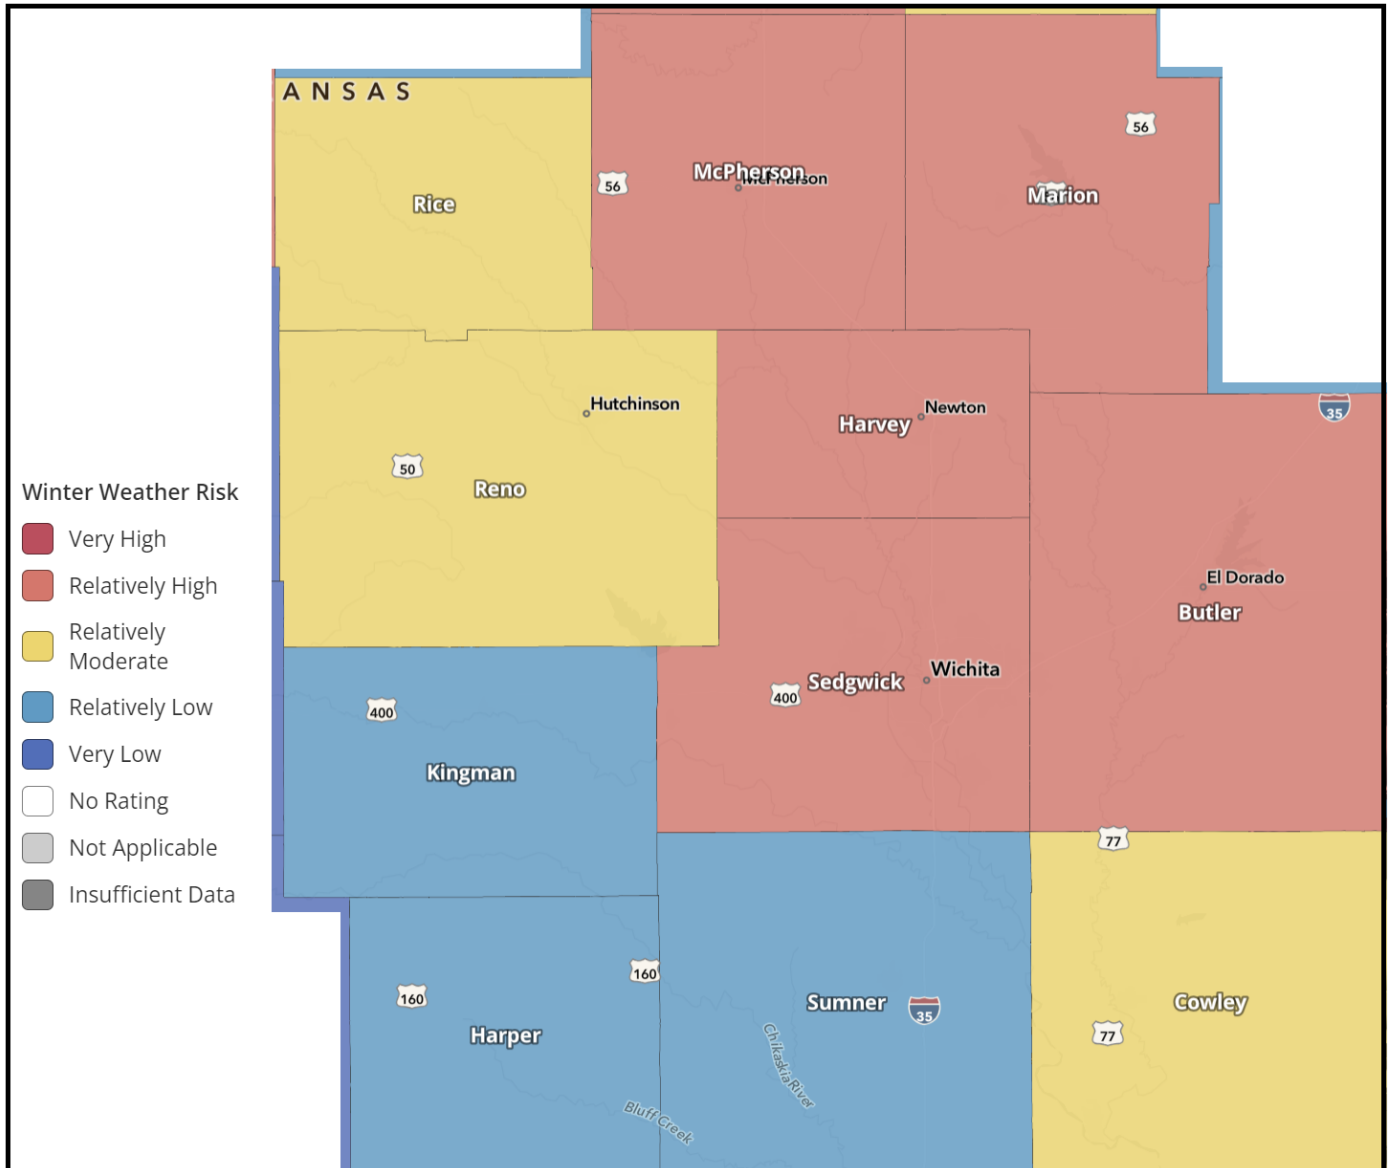

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating counties from ice storms and winter weather:

**Map X: Kansas Region G FEMA NRI Ice Storm Risk**

Source: FEMA NRI

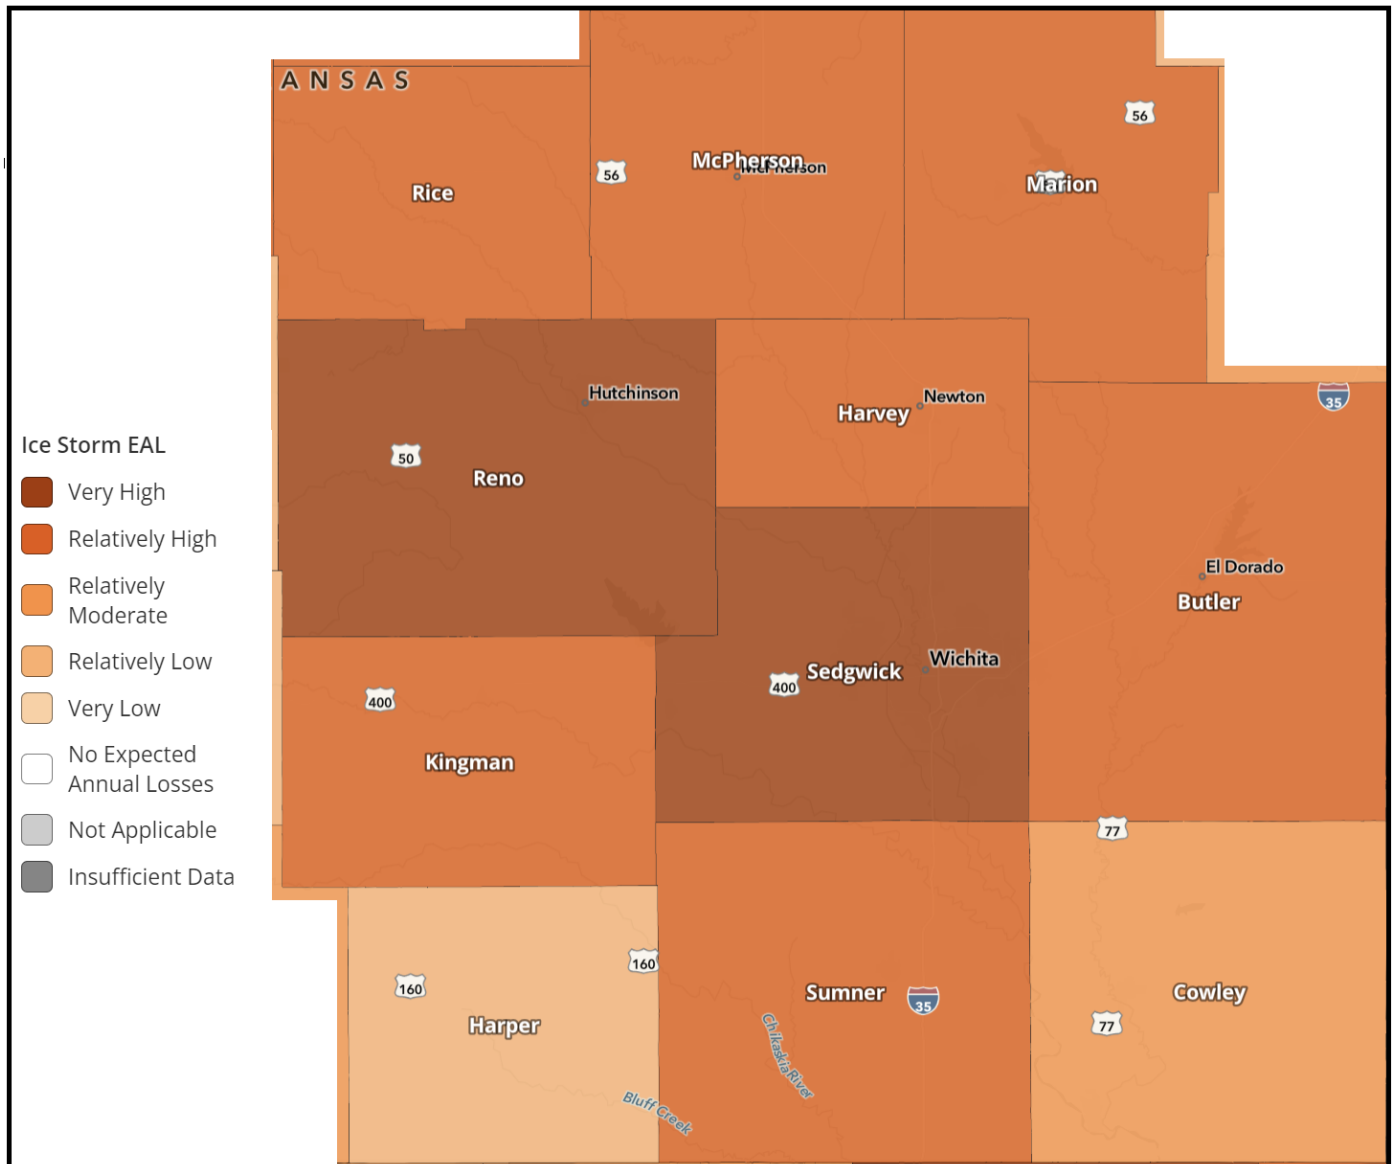

**Map X: Kansas Region G FEMA NRI Winter Weather Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for ice storms and winter weather for participating counties within Kansas Region G:

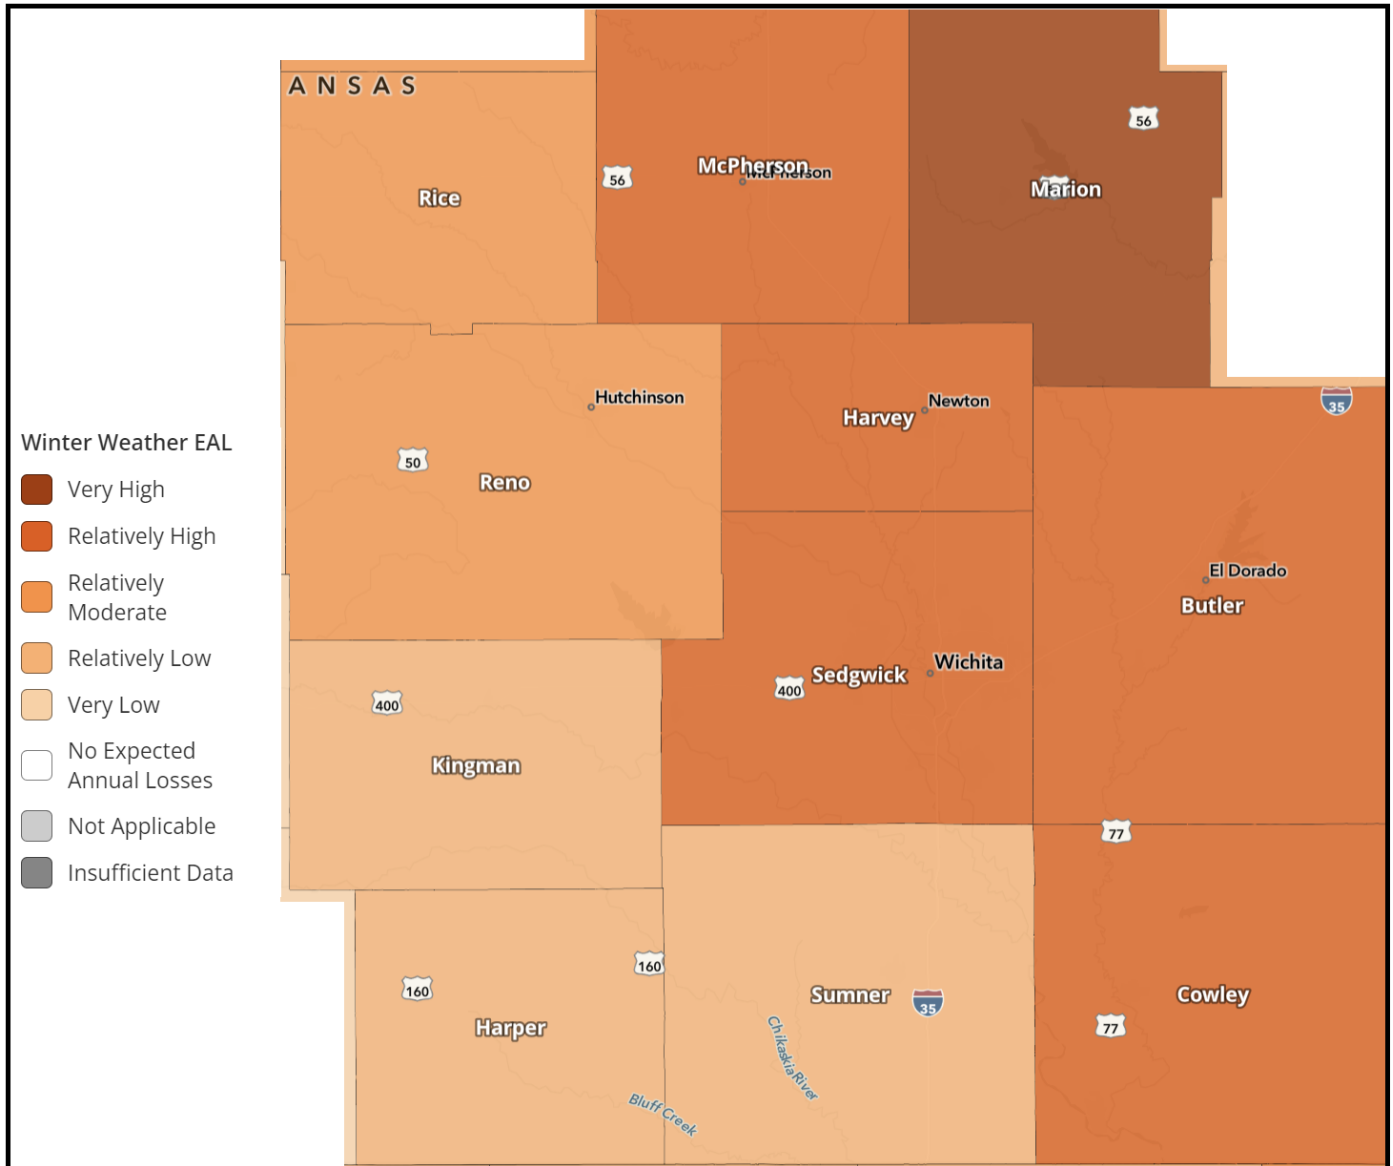

**Map X: Kansas Region G FEMA NRI Ice Storm EAL**

Source: FEMA NRI

**Map X: Kansas Region G FEMA NRI Winter Weather EAL**

Source: FEMA NRI

The following tables indicates the FEMA NRI and EAL analysis for each participating Kansas Region G county for extreme heat and extreme cold:

**Table X: Kansas Region G FEMA NRI and EAL for Ice Storm by County**

County	Risk Index	EAL
Butler	Relatively High	Relatively High
Cowley	Relatively Moderate	Relatively Low
Harper	Relatively Low	Very Low
Harvey	Relatively High	Relatively High
Kingman	Relatively High	Relatively High
Marion	Relatively High	Relatively High
McPherson	Relatively High	Relatively High
Reno	Very High	Very High
Rice	Relatively High	Relatively High
Sedgwick	Very High	Very High
Sumner	Relatively High	Relatively High

**Consequence Analysis**

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Severe Winter Weather Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	Freezing temperatures coupled with heavy snow accumulation can cause dangerous travel conditions, leading to accidents and road closures. Downed power lines can lead to a loss of electricity and heat, with the young and the elderly especially vulnerable. Extremely cold temperatures may lead to hypothermia and death.
Impact on Responders	Dangerous road conditions create a transportation challenge for first responders. First responders will need to control their own exposure to the elements for prolonged periods of time and will need to continuously seek heat and shelter to stay warm. Equipment may also be damaged or destroyed due to cold temperatures, heavy wind, ice, and heavy snow fall, which may lead to a decrease in response capabilities.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary. Severe winter weather may impact an agency's ability to maintain operations due to power outages and transportation difficulties. If the activation of alternate facilities was

**Table x: Severe Winter Weather Consequence Analysis**

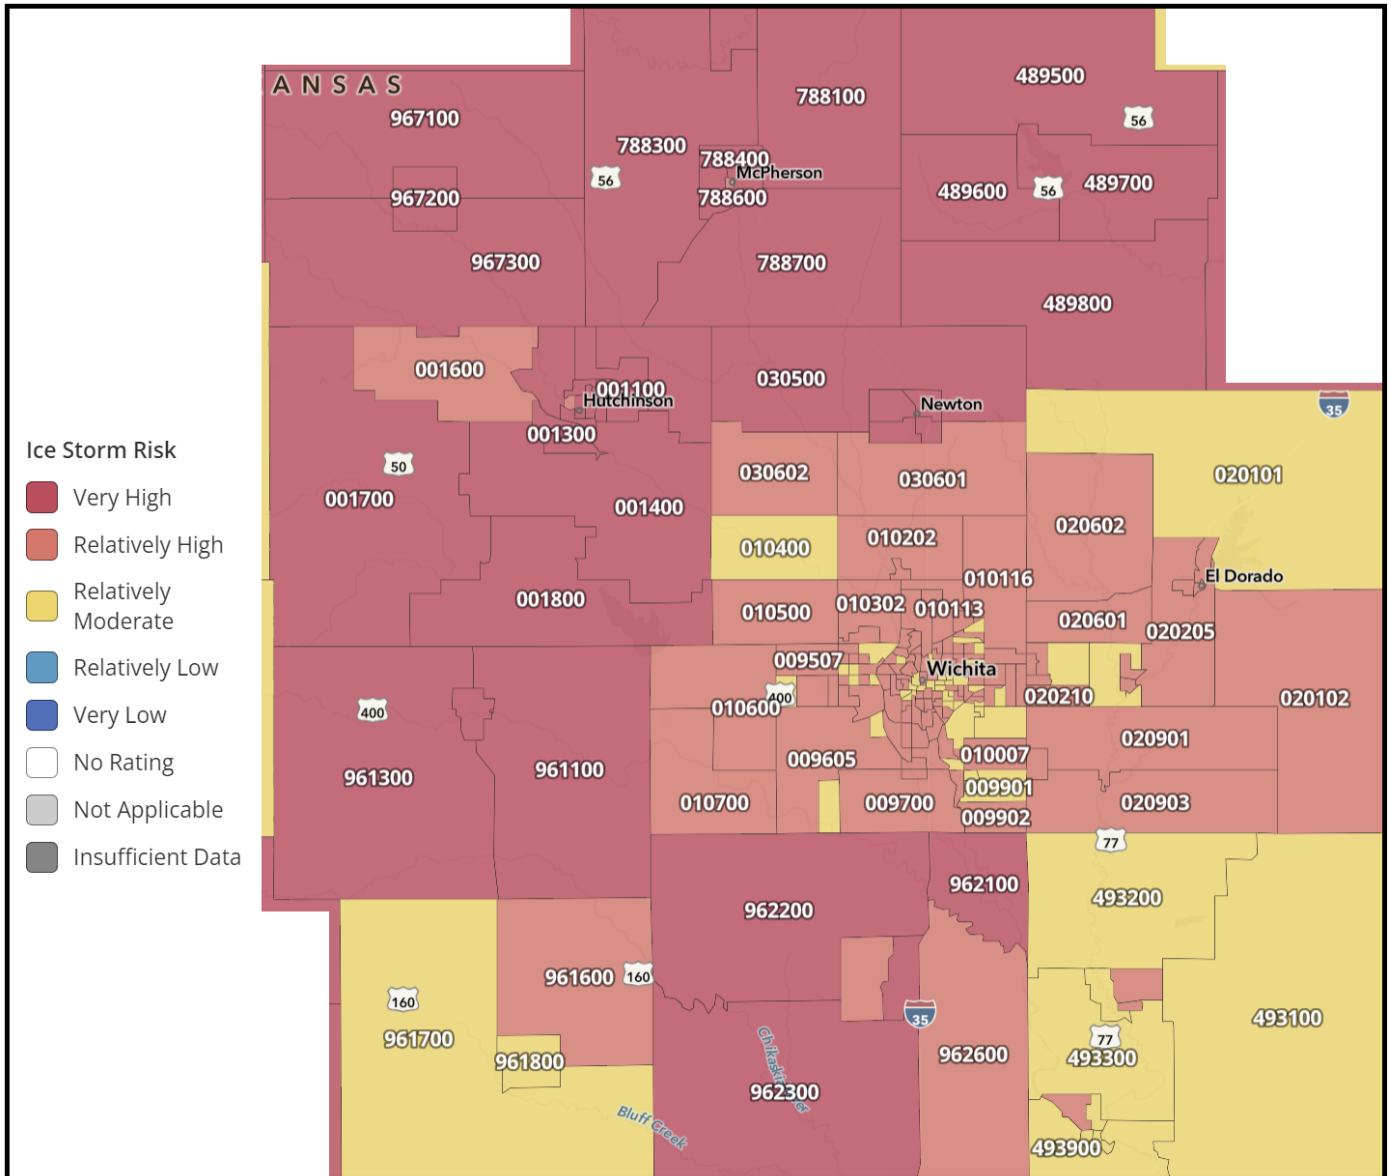

Subject	Potential Impacts
	required, travel may be difficult. Additionally, computer/network and other communication access may be impacted due to power outages.
Delivery of Services	The ability to deliver services can be impacted locally, regionally, or statewide depending on the severity of the severe winter weather event. Dangerous road conditions may lead to roadway and bridge closures, as well as transit service disruptions. Businesses and places of commerce may completely shut down, which leads to the disruption of goods and services.
Property, Facilities, and Infrastructure	Transportation, governmental operations, and communications may be heavily disrupted. Roads and bridges may be heavily impacted by severe winter weather, and may be completely obstructed by downed trees, powerlines, and snow accumulation. Snow and ice can impact access to homes and critical facilities such as hospitals, schools, and supermarkets. Power loss can lead to disruption of critical infrastructure and technology.
Impact on Environment	Heavy snow and ice accumulation can weigh down and damage vegetation, tree limbs, and power lines. Flooding may also occur after the rapid melting of a heavy snowfall, causing bodies of water to flood, damaging the surrounding areas. Exposure to extreme winter weather may result in animal death. Chemicals used to treat roadways may contaminate natural environments and water reservoirs if used in large quantities.
Economic Conditions	Severe winter weather poses a fiscal impact on the governments, even if some of those costs can be recouped through federal grant reimbursements. Local, county, and state resources may be drained by a severe winter weather event.
Public Confidence in Governance	The public's confidence in governance is affected by immediate local and state response through direct and effective actions. Efficiency in response and recovery operations is critical in keeping public confidence high.

#### 4.15.7 Jurisdictional Risk and Vulnerability

To help understand the risk and vulnerability to earthquakes of participating jurisdictions mapping from the FEMA NRI was run on a census tract level. As the NRI does not generate mapping for individual jurisdictions, census tract analysis is the closest analogue available to understand individual jurisdiction conditions.

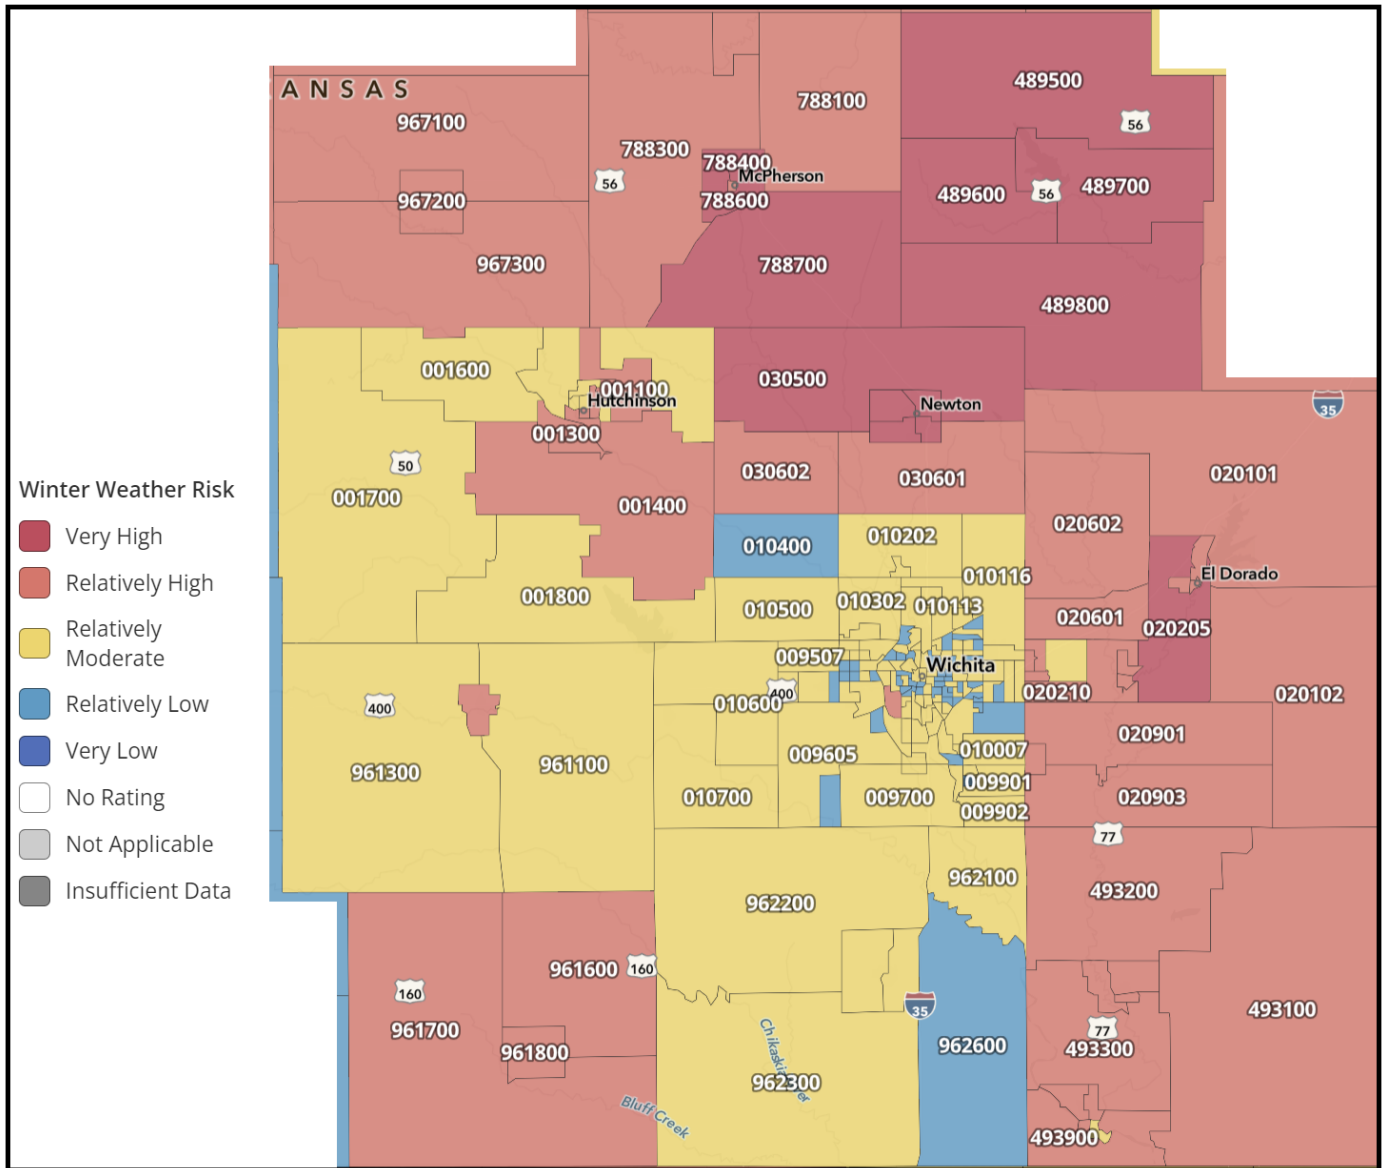

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating jurisdictions (as indicated by census tract) from ice storms and winter weather events:

**Map X: FEMA NRI Jurisdictional Ice Storm Risk**

Source: FEMA NRI

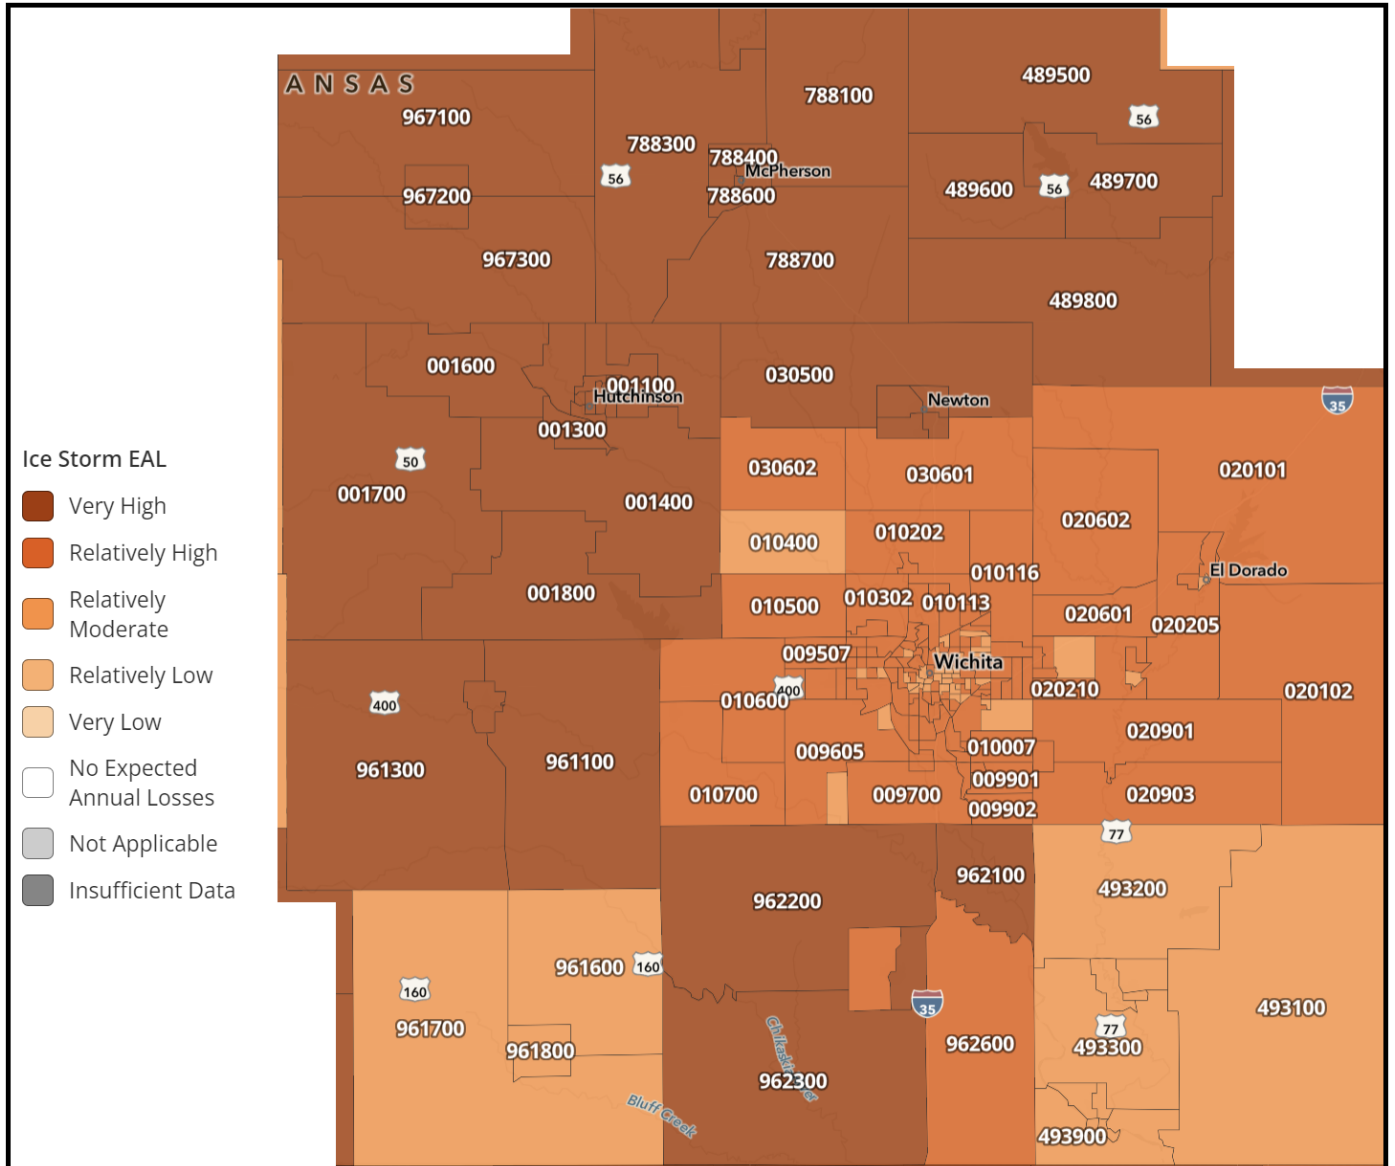

**Map X: FEMA NRI Jurisdictional Winter Weather Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for ice storms and winter weather for participating jurisdictions (as indicated by census tract) within Kansas Region G:

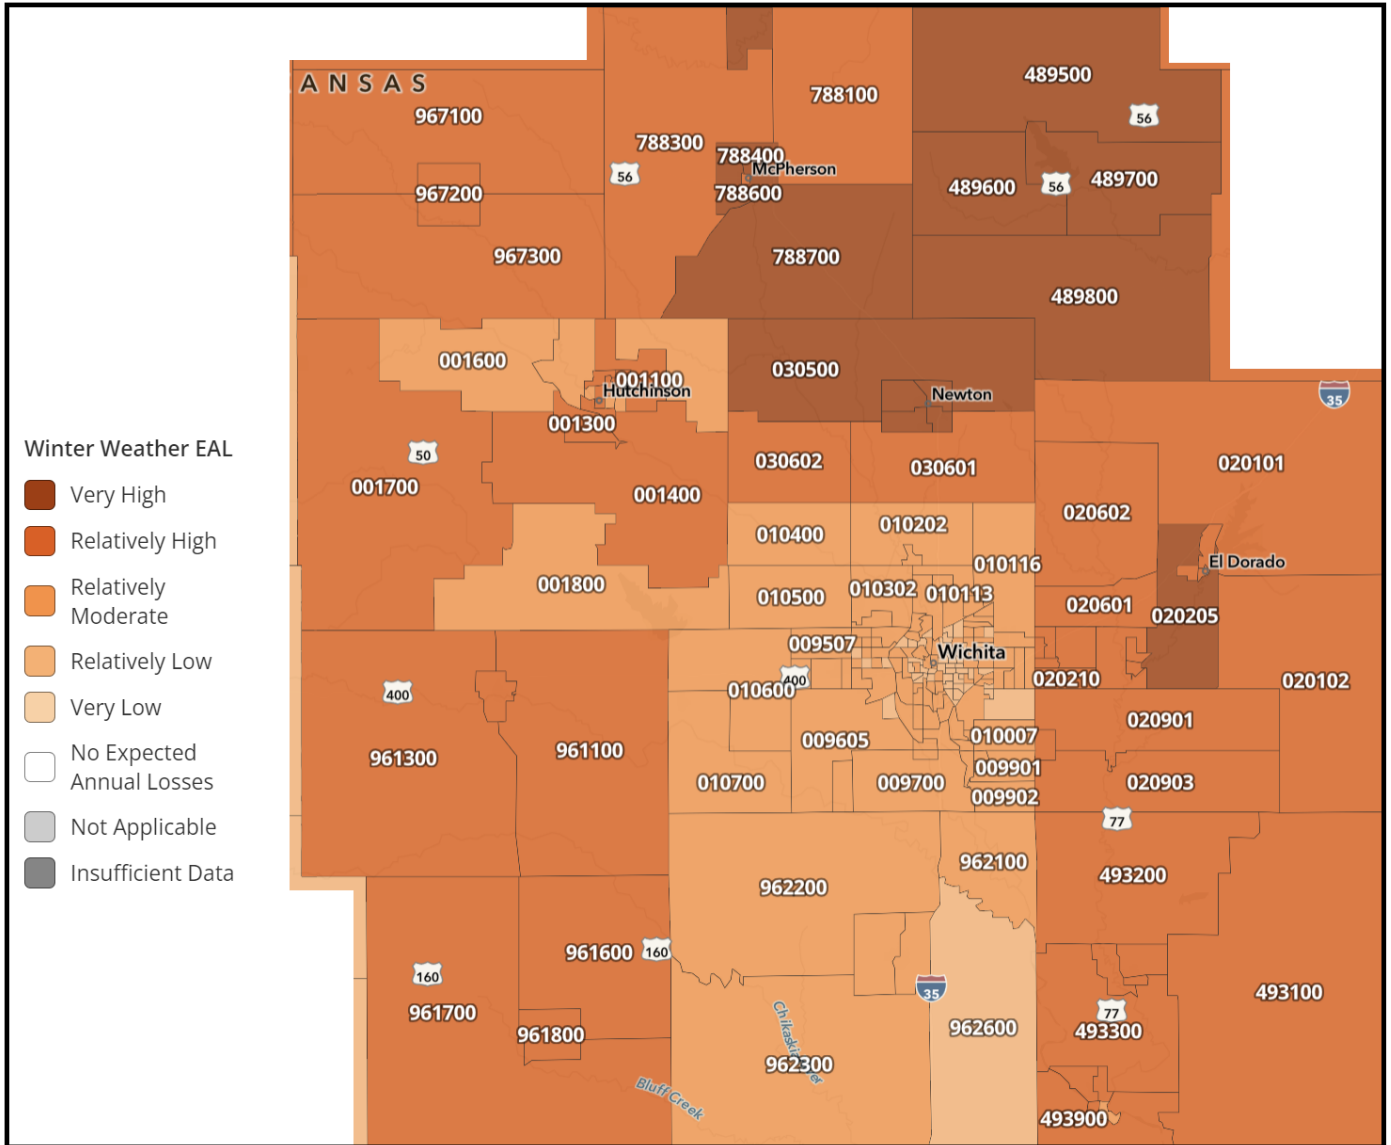

**Map X: FEMA NRI Jurisdictional Ice Storm EAL**

Source: FEMA NRI

**Map X: FEMA NRI Jurisdictional Winter Weather EAL**

Source: FEMA NRI

## 4.16 Tornadoes

### 4.16.1 Hazard Description

A tornado is a violent, dangerous, rotating column of air that is in contact with both the surface of the earth and a cumulonimbus cloud or, in rare cases, the base of a cumulus cloud. Tornadoes come in many shapes and sizes but are typically in the form of a visible condensation funnel, whose narrow end touches the earth and is often encircled by a cloud of debris and dust.

Tornadoes can cause several kinds of damage to buildings. Tornadoes have been known to lift and move objects weighing more than three tons, toss homes more than 300 feet from their foundations, and siphon millions of tons of water. However, less spectacular damage is much more common. Houses and other obstructions in the path of the wind cause the wind to change direction. This change in wind direction increases pressure on parts of the building. The combination of increased pressures and fluctuating wind speeds creates stress on the building that frequently causes connections between building components, roofing, siding, and windows to fail. Tornadoes can also generate a tremendous amount of flying debris. If wind speeds are high enough, airborne debris can be thrown at buildings with enough force to penetrate windows, roofs, and walls.

### 4.16.2 – Location and Extent

Tornadoes can strike anywhere in Kansas Region G. A tornado may arrive with a squall line or cold front and touch down quickly. Smaller tornadoes can strike without warning. Other times tornado watches and sirens will alert communities of high potential tornado producing weather or an already formed tornado and its likely path.

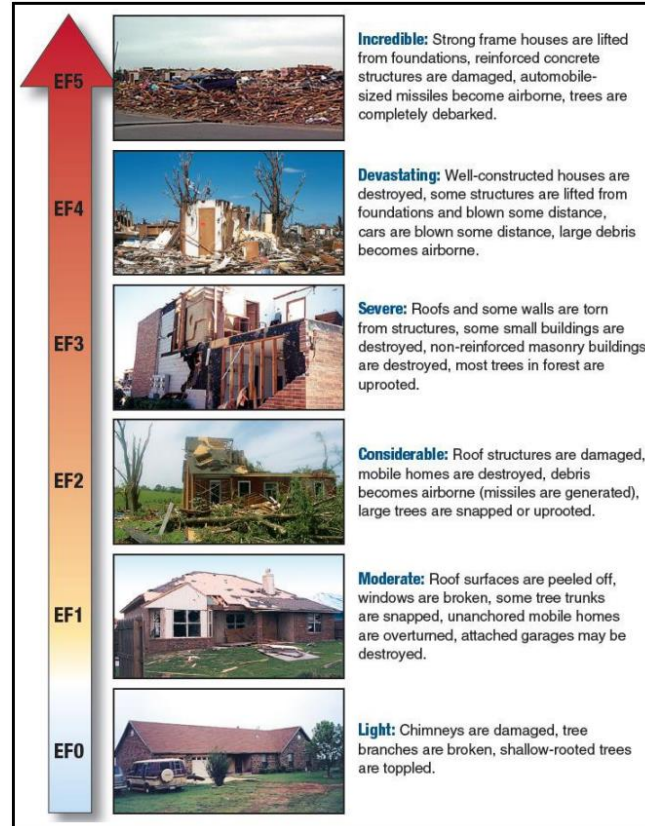

Since 2007, the United States uses the Enhanced Fujita (EF) Scale to categorize tornadoes. The scale correlates wind speed values per F level and provides a rubric for estimating damage.

**Table X: Enhanced Fujita Scale**

Scale	Wind Speed (mph)	Relative Frequency	Potential Damage
EF0	65-85	53.5%	Light. Peels surface off some roofs; some damage to gutters or siding; branches broken off trees; shallow-rooted trees pushed over. Confirmed tornadoes with no reported damage (i.e., those that remain in open fields) are always rated EF0.
EF1	86-110	31.6%	Moderate. Roofs severely stripped; mobile homes overturned or badly damaged; loss of exterior doors; windows and other glass broken.
EF2	111-135	10.7%	Considerable. Roofs torn off well-constructed houses; foundations of frame homes shifted; mobile homes complete destroyed; large trees snapped or uprooted; light object missiles generated; cars lifted off ground.
EF3	136-165	3.4%	Severe. Entire stores of well-constructed houses destroyed; severe damage to large buildings such as shopping malls; trains overturned; trees debarked; heavy cars lifted off the ground and thrown; structures with weak foundations blown away some distance.
EF4	166-200	0.7%	Devastating. Well-constructed houses and whole frame houses completely leveled; cars thrown, and small missiles generated.
EF5	>200	<0.1%	Explosive. Strong frame houses leveled off foundations and swept away; automobile-sized missiles fly through the air in excess of 300 ft.; steel reinforced concrete structure badly damaged; high rise buildings have significant structural deformation; incredible phenomena will occur.

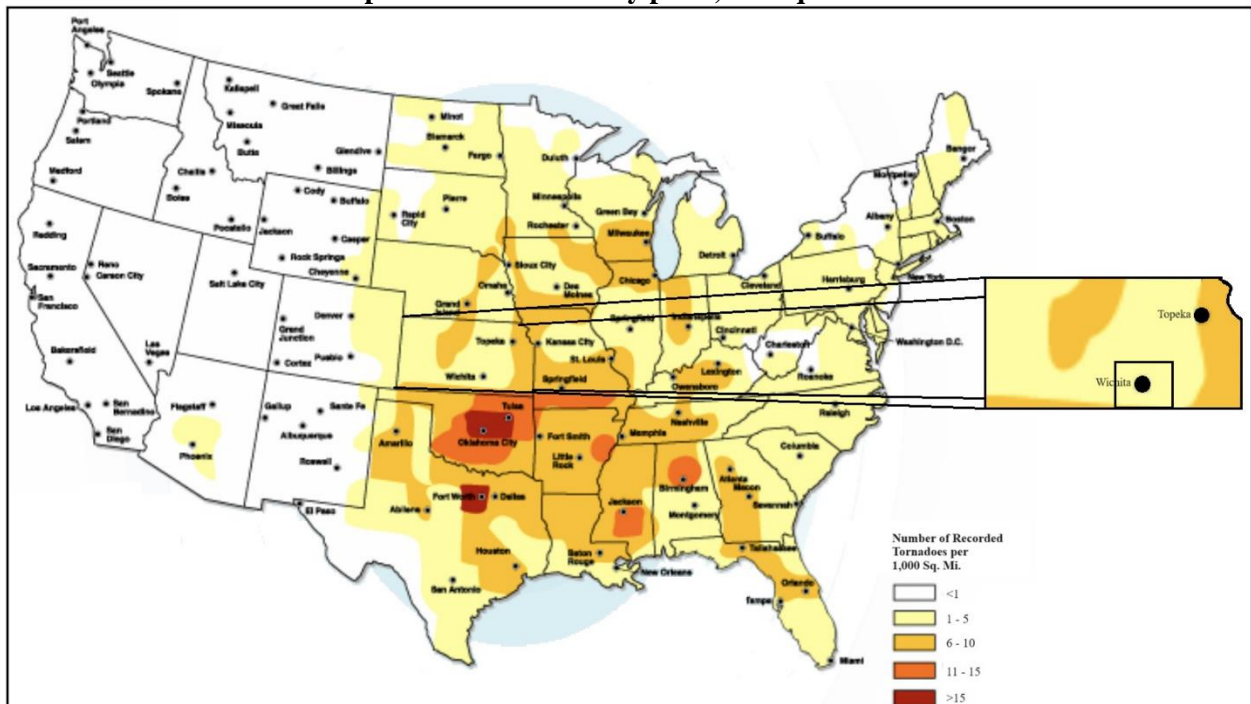

**Figure X: Enhanced Fujita Scale Damage Estimates**

Source: FEMA

The following map, from FEMA, indicates tornado activity per 1,000 square miles for Kansas Region.

**Map X: Tornado Activity per 1,000 Square Miles**

Source: FEMA

4.16.3 Previous Occurrences

Historical events of significant magnitude or impact can result in a Presidential Disaster Declaration. The following table details Presidential Disaster Declarations related to tornadoes.

Table X: Kansas Region G Presidentially Declared Disasters

Designation	Declaration Date	Incident Type	Counties	Assistance
DR-4499-KS	08/14/2019	Severe Storms, Straight-Line Winds, Flooding, Tornadoes, Landslides, and Mudslides	Butler, Cowley, Harper, Harvey, Kingman, Marion, McPherson, Reno, Rice, and Sumner	\$51,157,548

The following table presents NCEI identified tornado events and the resulting damage totals in Kansas Region G from 2009 to 2023.

Table X: Kansas Region G Tornado Events

County	Number of Events	Property Damage	Deaths or Injuries	Highest Rated Tornadoes	Number of EF2 or Greater Tornadoes
Butler	14	\$37,038,000	1	EF3	1
Cowley	15	\$420,000	0	EF2	1
Harper	6	\$0	0	EF3	1
Harvey	4	\$30,000	0	EF2	1
Kingman	10	\$125,000	0	EF3	2
Marion	5	\$100,000	0	EF1	0
McPherson	7	\$290,000	0	EF1	0
Reno	11	\$380,000	0	EF3	1
Rice	7	\$75,000	0	EF2	1
Sedgwick	10	\$505,235,000	43	EF3	4
Sumner	12	\$125,000	0	EF3	1

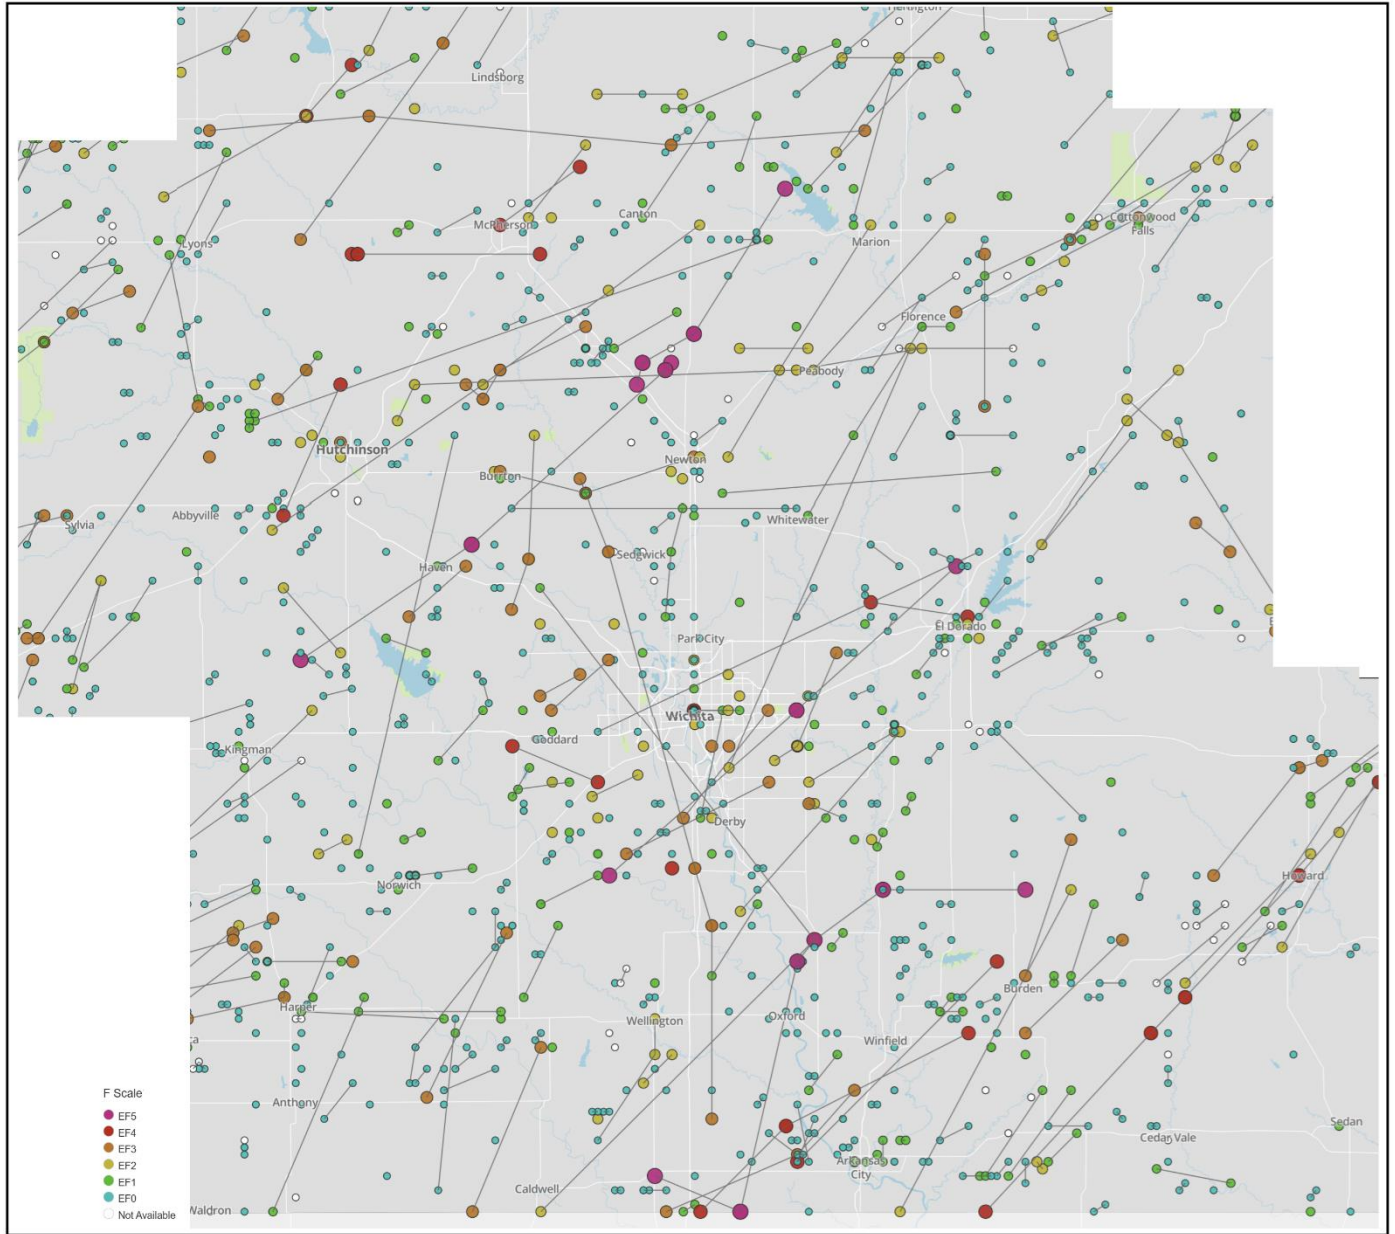

Source: NCEI

It is worth noting that damage estimates indicated by the NCEI are often artificially low. This underreporting is a result of the way the events are reported to the NCEI, often by the local and/or NWS office. When reporting an event oftentimes the NWS office does not have access to the actual damage assessment resulting from that event. As such, the report often details a very low amount or zero-dollar amount for damages. Additionally, deaths and injuries may be underreported as they may be a result of a concurrent event, such as a person driving unsafely during heavy rain and passing away.

NOAA has been tracking tornadoes in Kansas for decades. This following map, which contains data from 1950 to 2023, pinpoints where tornadoes have touched down and traces its path.

**Map X: Kansas Region G Tornado Paths**

Source: NOAA

#### 4.16.4 Probability of Future Events

Predicting the probability of tornado occurrences is tremendously challenging due to the large number of factors involved and the random nature of formation. Based on historical occurrences, Kansas Region G will continue to experience tornado events on an annual basis. The following tables, using data from the NCEI, indicate the yearly probability of a tornado event, the number of deaths or injuries, and estimated property damage for each county in Kansas Region G.

**Table X: Kansas Region G NCEI Tornado Event Probability Summary**

County	Days with Event	Average Events per Year	Deaths / Injuries	Average Deaths / Injuries per Year	Property Damage	Average Property Damage per Year
Butler	14	1	1	<1	\$37,038,000	\$2,469,200

**Table X: Kansas Region G NCEI Tornado Event Probability Summary**

County	Days with Event	Average Events per Year	Deaths / Injuries	Average Deaths / Injuries per Year	Property Damage	Average Property Damage per Year
Cowley	15	1	0	0	\$420,000	\$28,000
Harper	6	<1	0	0	\$0	\$0
Harvey	4	<1	0	0	\$30,000	\$2,000
Kingman	10	1	0	0	\$125,000	\$8,333
Marion	5	<1	0	0	\$100,000	\$6,667
McPherson	7	<1	0	0	\$290,000	\$19,333
Reno	11	1	0	0	\$380,000	\$25,333
Rice	7	<1	0	0	\$75,000	\$5,000
Sedgwick	10	1	43	3	\$505,235,000	\$33,682,333
Sumner	12	1	0	0	\$125,000	\$8,333

Source: NCEI

#### 4.16.5 Projected Changes in Location, Intensity, Frequency, and Duration

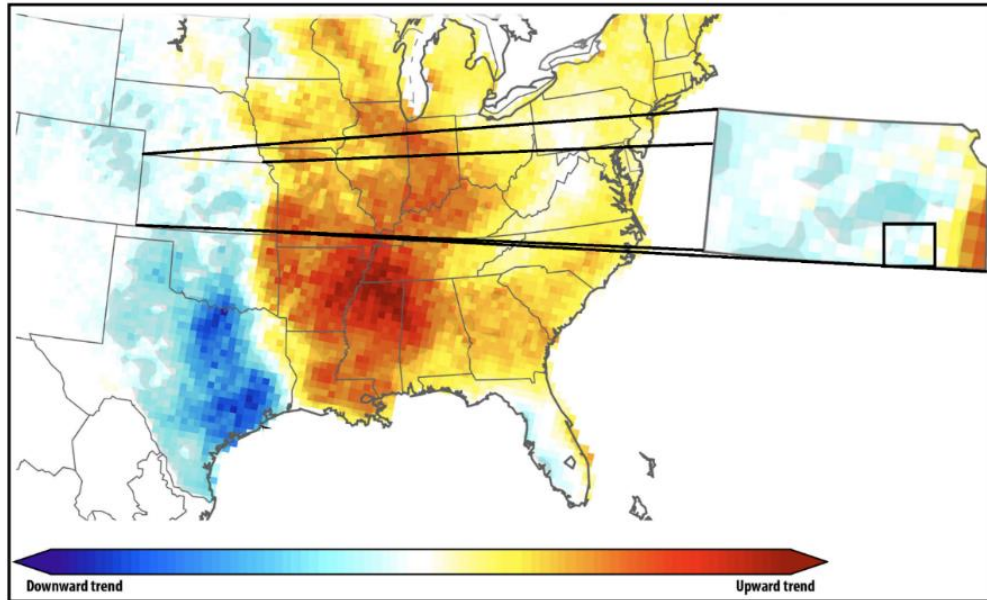

The relationship between climate change and tornadoes is complex, and while there is ongoing research in this area, it is not fully understood. Tornadoes are small-scale, short-lived weather phenomena that can be influenced by a variety of atmospheric factors, including temperature, humidity, wind patterns, and atmospheric instability. Climate change can influence some of these factors, which may, in turn, affect tornado activity. Tornadoes typically form when warm, moist air near the surface clashes with cooler, drier air aloft, creating atmospheric instability. Climate change can alter temperature and humidity patterns, potentially affecting the conditions necessary for tornado formation. Additionally, climate change can lead to more extreme and variable weather patterns. While this may not necessarily increase the overall number of tornadoes, it could lead to more unpredictable and severe tornado events when they do occur. Some research suggests that climate change could lead to longer tornado seasons, with tornadoes occurring outside of their typical timeframes.

It's important to emphasize that while there may be some links between climate change and tornado activity, these links are not fully understood, and it is difficult to attribute specific tornado events to climate change. Tornadoes are influenced by a complex interplay of factors, and any changes in tornado patterns may vary by region.

Research conducted by the National Severe Storms Lab looked at Significant Tornado Parameters to help determine future tornado probability. Significant Tornado Parameters are a measurement of the major parameters of tornado conditions, including wind speed and direction, wind at differing altitudes, unstable air patterns, and humidity. The following map, generated by Northern Illinois University and compiled from Significant Tornado Parameter data, indicates that Kansas Region G may see a decreasing number of tornadoes.

**Map X: Tornado Frequency Trends**

Source: Northern Illinois University

#### **4.16.6 Vulnerability and Impact**

While difficult to quantify, as the impacts of future tornadoes will be determined by many factors, the impacts of a tornado may be widespread. An EF4 or EF5 tornado has the potential to level facilities. A lesser magnitude tornado can rip off roofs and walls while launching airborne missiles born from debris. In the absence of proper shelter tornadoes can cause serious injury. In general, if potentially exposed persons take shelter in a solid, well-constructed shelter protection from tornadoes would be provided. However, old or poorly constructed facilities may be more prone to damage, potentially increasing the impact on economically disadvantaged populations.

Tornadoes can have significant and often devastating impacts on people and communities. These impacts can vary depending on the tornado's intensity, size, path, and may include:

- **Injuries and Fatalities:** Tornadoes can cause a wide range of injuries, from minor cuts and bruises to severe trauma. Flying debris, structural damage, and the force of the wind can lead to injuries or fatalities among those directly affected by the tornado. Prompt medical care is essential to treat injuries effectively and save lives.
- **Mental Health Effects:** Tornadoes can be extremely traumatic events, causing psychological distress and emotional trauma for survivors. Individuals may experience post-traumatic stress disorder, anxiety, depression, and grief. Mental health support and counseling services are often needed to help survivors cope with these emotional challenges.
- **Displacement:** People may need to evacuate their homes or be temporarily displaced due to tornado damage, requiring emergency shelter and support.

After a tornado, health risks may arise due to contaminated water, debris, and unsafe conditions. Inadequate sanitation and exposure to harsh weather can exacerbate health issues. Children, the elderly, and individuals with disabilities or limited mobility may face additional challenges in evacuating to safety and accessing needed resources.

Tornadoes can have significant and wide-ranging impacts on facilities, critical facilities, and critical infrastructure. These risks can have significant economic and operational consequences, and can include:

- **Critical Facility Damage:** Hospitals and healthcare facilities may be damaged or rendered inoperable during tornadoes, affecting the ability to provide medical care during a disaster. Fire stations, police stations, and emergency operation centers may be damaged or destroyed, impacting the ability of first responders to

coordinate disaster response efforts. Damage to emergency shelters and housing facilities can disrupt services which are critical for providing temporary shelter to displaced individuals and families.

- **Infrastructure Damage:** High winds and blowing debris can cause considerable damage to infrastructure. This can result in costly repairs and disruptions to daily lives for an extended period.
- **Power Outages:** Tornadoes can cause power outages by bringing down power lines and damaging electrical infrastructure. Critical facilities such as hospitals, emergency response centers, and data centers may rely on backup generators to maintain essential operations during outages.
- **Communication Disruptions:** Tornadoes can damage communication infrastructure, including cell towers, telephone lines, and data centers, leading to disruptions in phone and internet services. This can hinder emergency communication and coordination, affecting critical response efforts.
- **Transportation Disruptions:** Debris and fallen trees on roads, runways, and railways can disrupt transportation networks, leading to travel delays, accidents, and closures. Critical facilities may face challenges in receiving essential supplies and personnel during and after the storm.
- **Healthcare System Strain:** Hospitals and healthcare facilities may experience increased demand for medical services due to storm-related injuries and illnesses.
- **Water and Wastewater System Interruptions:** Tornadoes can damage water treatment plants, pumping stations, and water distribution systems. This can lead to a loss of clean drinking water and sanitation services, posing health risks to affected communities. Damage to wastewater treatment facilities and sewer systems can result in the release of untreated sewage, creating environmental hazards and public health concerns.
- **Fuel Supply Disruptions:** Tornadoes disrupt fuel supply chains, leading to shortages of gasoline, diesel, and heating oil. Critical facilities may rely on fuel for backup power generators and heating systems.
- **Property Damage:** Tornadoes can result in property damage, up to and including complete structural collapse.

Tornadoes can have significant impacts on the environment. These impacts are often destructive and can affect ecosystems, wildlife, natural resources, and even the local climate. Tornadoes can disrupt natural habitats by uprooting or damaging trees, destroying vegetation, and altering landscapes. This can affect the habitat suitability for wildlife and plant species. Tornadoes can harm or displace wildlife, resulting in injury or death. Nesting birds, burrowing mammals, and other species can be particularly vulnerable. As tornadoes can transport plant seeds, insects, and other organisms over long distances, in the aftermath it is possible for invasive species to take root in new areas, especially those impacted by wildfires caused by downed utility lines.

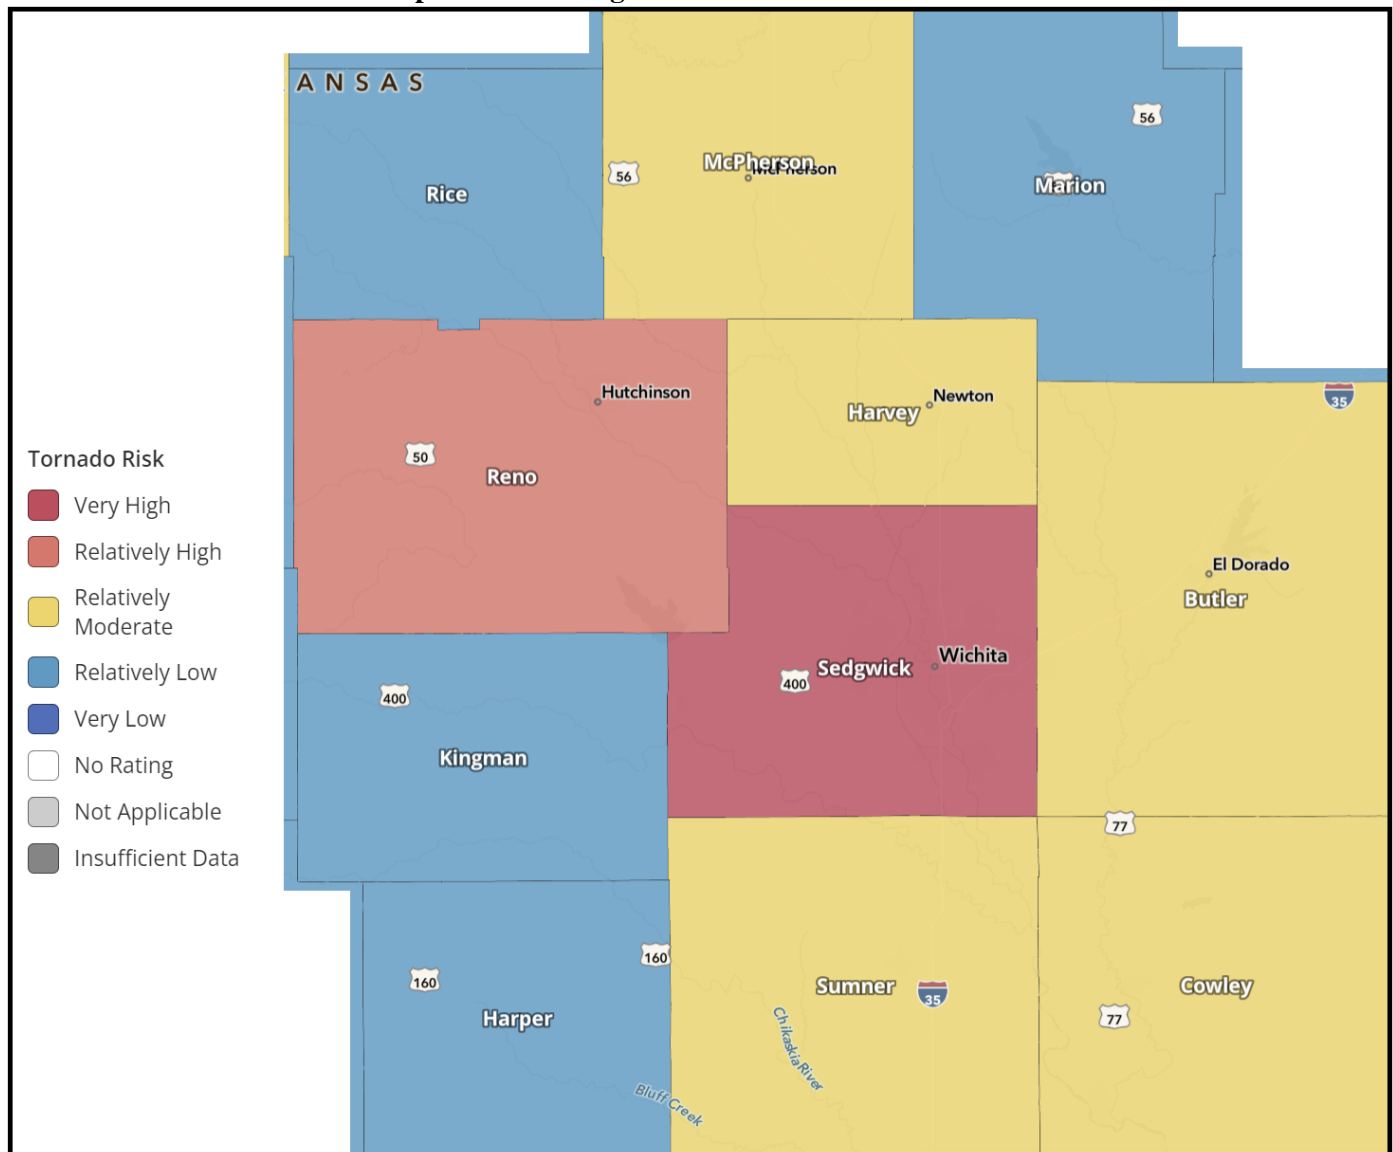

Tornadoes can have significant and wide-ranging impacts on local operations and facilities. When tornadoes strike, they can disrupt government functions, damage critical infrastructure, and strain resources. Some of the key impacts of tornadoes on operations and facilities may include:

- **Emergency Response and Public Safety:** Tornadoes can lead to a surge in emergency calls for services related to accidents, injuries, and damaged structures. State agencies involved in emergency response must mobilize additional resources to handle these demands.
- **Emergency Operations Centers:** Tornadoes often require the activation of state Emergency Operations Centers to coordinate emergency response efforts. These centers serve as hubs for communication, resource allocation, and decision-making during disasters.
- **Emergency Shelters and Services:** Tornadoes may require the establishment of emergency shelters and services for displaced residents. State agencies must coordinate the setup and operation of these facilities.
- **Education Disruption:** Tornadoes can lead to school closures, affecting state-run education programs and services. State agencies may need to coordinate with school districts to ensure the safety of students.
- **Budgetary Impact:** The costs associated with emergency response efforts, disaster recovery, and infrastructure repair can strain state budgets.

- **Communication Challenges:** Tornadoes can disrupt communication networks, hindering the ability of government agencies to communicate internally and with the public. This can impact emergency notifications and coordination efforts.
- **Administrative and Governance Challenges:** Government offices and facilities may experience closures or reduced staffing during tornadoes, affecting administrative functions, regulatory processes, and public services.
- **Economic Impact:** The destruction of infrastructure and businesses can have significant economic consequences for the state and local communities, including job losses and reduced economic activity.
- **Public Services:** Tornadoes can disrupt the delivery of public services, including transportation, utilities, and social services, affecting the well-being of residents.

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating counties from tornadoes:

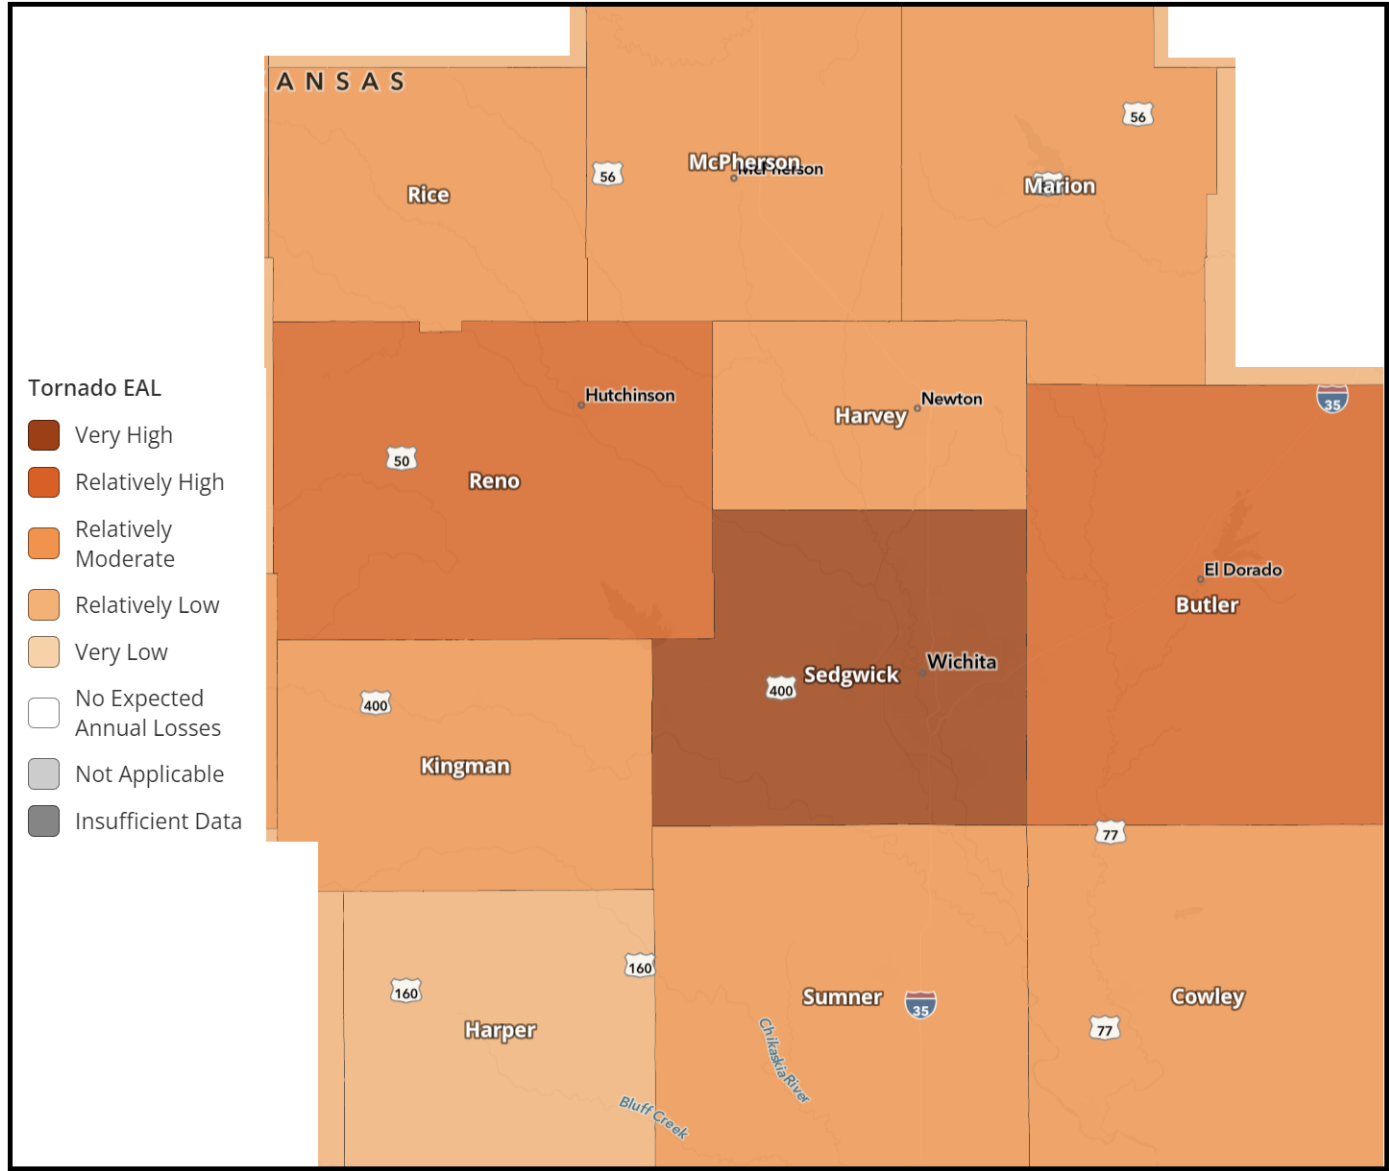

**Map X: Kansas Region G FEMA NRI Tornado Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community’s risk. The following map indicates the EAL for tornadoes for participating counties within Kansas Region G:

Map X: Kansas Region G FEMA NRI Tornado EAL

Source: FEMA NRI

The following table indicates the FEMA NRI and EAL analysis for each participating Kansas Region G county for tornado:

**Table X: Kansas Region G FEMA NRI and EAL for Tornadoes by County**

County	Risk Index	EAL
Butler	Relatively Moderate	Relatively High
Cowley	Relatively Moderate	Relatively Moderate
Harper	Relatively Low	Relatively Low
Harvey	Relatively Moderate	Relatively Low
Kingman	Relatively Low	Relatively Moderate
Marion	Relatively Low	Relatively Moderate
McPherson	Relatively Moderate	Relatively Moderate
Reno	Relatively High	Relatively High
Rice	Relatively Low	Relatively Moderate
Sedgwick	Very High	Very High
Sumner	Relatively Moderate	Relatively Moderate

### Consequence Analysis

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Tornado Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	High wind speeds can cause automobiles to become airborne, destroy homes, and turn debris into projectiles, which may cause injury or death. An increased demand for medical treatment for traumatic injuries caused by the tornado would be anticipated. Significant portions of the population may be displaced by the destruction and those individuals may not have access to personal documents or medical records.
Impact on Responders	First responders may be injured as the tornado passes, resulting in employee absenteeism that impacts the overall capacity to respond to the event. The deposit of debris on major roadways, the location of the event, and/or damage to equipment or facilities may increase the response times. Exposed wires or hazardous materials may cause injury to first responders during search and rescue operations.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. Tornadoes may impact an agency's ability to maintain continuity of operations due to power or communications infrastructure impacts. If the activation of alternate facilities was required, travel may be difficult due to reduced transportation options, power outages, or damage to facilities.
Delivery of Services	Delivery of services may be impacted by dangerous conditions or disruption to transportation systems, causing food, water, and resource systems to be delayed or halted. Waterway infrastructure may be damaged or malfunction, stopping barge and ship traffic. Goods may be damaged, destroyed, or carried off by high winds.
Property, Facilities, and Infrastructure	Damages from lower intensity tornadoes can range from chimney damage to uprooted shallow trees. A significant tornado (EF-2) would cause damage to roofs on frame houses, complete destruction of mobile homes and large trees and utility lines snapping. A devastating tornado (EF-4) would result in well-constructed houses being leveled, weak foundations blown away, and cars thrown away. Communications or power infrastructure may be damaged or destroyed.
Impact on Environment	Tornadoes may cause significant damage to the environment by exposing hazardous materials, causing contamination of water or food sources, or uprooting vegetation.

**Table x: Tornado Consequence Analysis**

<b>Subject</b>	<b>Potential Impacts</b>
	Animals may be injured by flying debris or being lifted by the tornado. Agricultural crops may be lost due to contamination or being uprooted.
Economic Conditions	Tornadoes pose a fiscal impact on the local governments, even if some of those costs can be recouped through federal grant reimbursements. Fiscal resources may be drained by the occurrence of a tornado.
Public Confidence in Governance	The public's confidence in governance is affected by immediate local and state response through direct and effective actions. Efficiency in response and recovery operations is critical in keeping public confidence high.

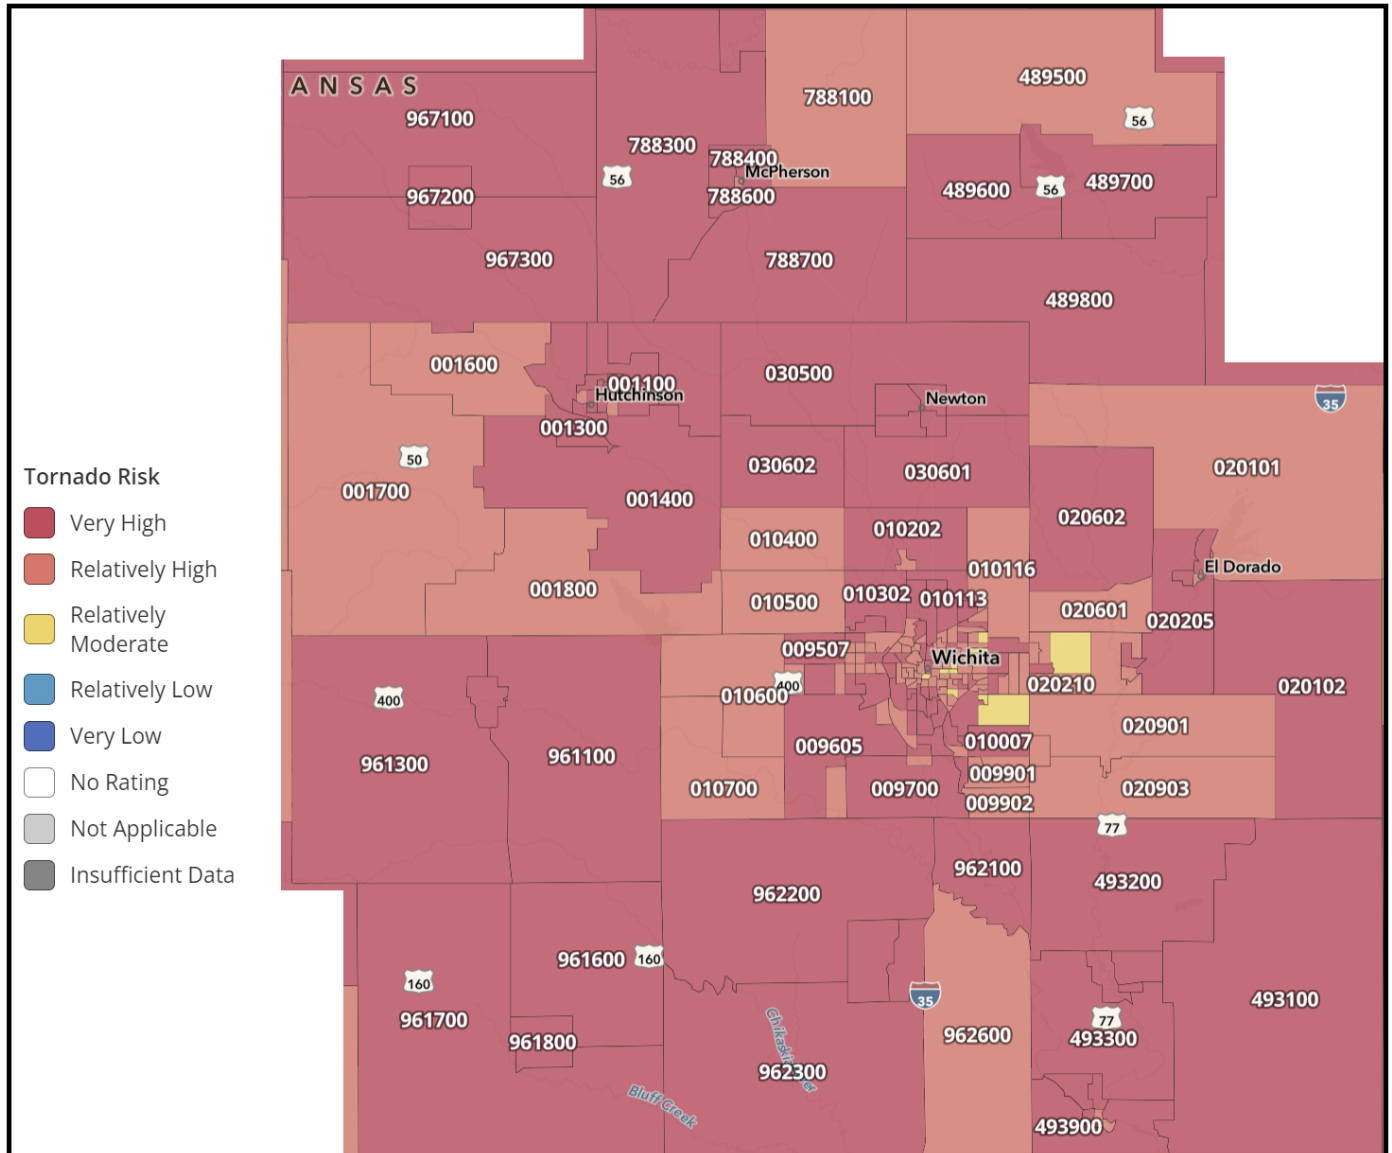

#### **4.16.7 Jurisdictional Risk and Vulnerability**

To help understand the risk and vulnerability to earthquakes of participating jurisdictions mapping from the FEMA NRI was run on a census tract level. As the NRI does not generate mapping for individual jurisdictions, census tract analysis is the closest analogue available to understand individual jurisdiction conditions.

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating jurisdictions (as indicated by census tract) from tornadoes:

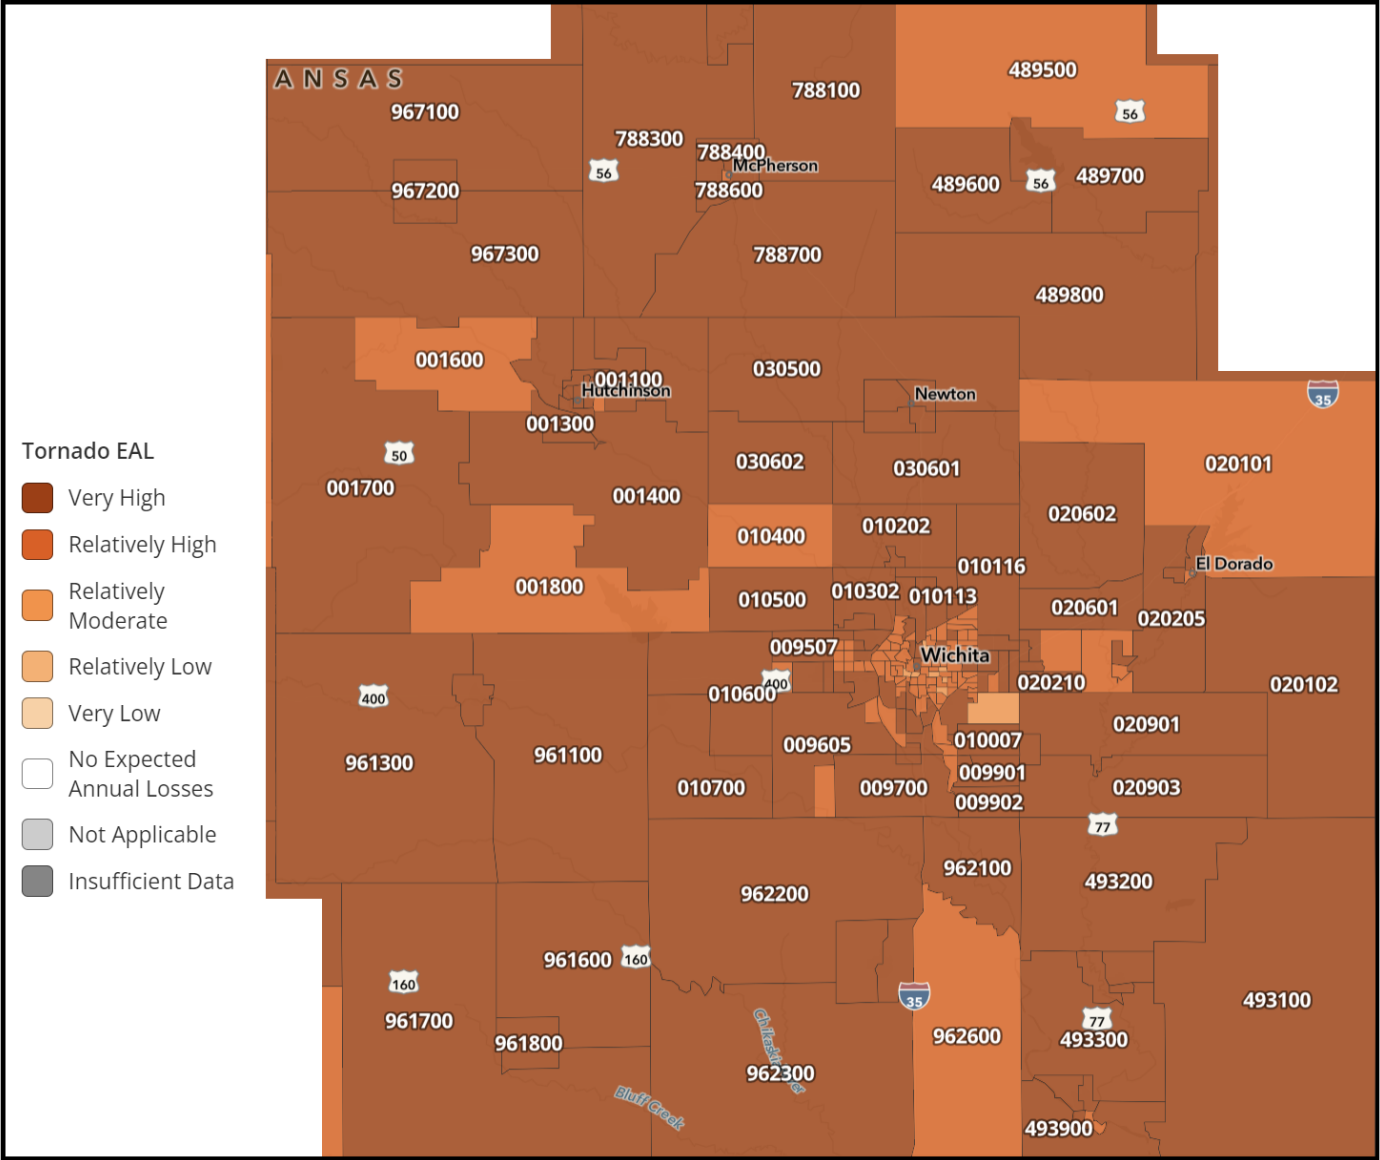

**Map X: FEMA NRI Jurisdictional Tornado Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for tornadoes for participating jurisdictions (as indicated by census tract) within Kansas Region G:

Map X: FEMA NRI Jurisdictional Tornado EAL

Source: FEMA NRI

## 4.17 Wildfires

### 4.17.1 Hazard Description

The NWS defines a wildfire as any free burning uncontrollable wildland fire not prescribed for the area which consumes the natural fuels and spreads in response to its environment. They can occur naturally, by human accident, and on rare occasions by human action. Population de-concentration in the U.S. has resulted in rapid development in the outlying fringe of metropolitan areas and in rural areas with attractive recreational and aesthetic amenities, especially forests. This expansion has increased the likelihood that wildfires will threaten life and property.

According to the National Park Service there three classifications of wildfires:

- **Surface Fire:** Burning which may spread rapidly and ignites leaf litter, fallen branches and other fuels located at ground level.
- **Ground Fire:** Burning of organic matter in the soil beneath the surface.
- **Crown Fire:** Burning through the top layer (canopy) of trees. Crown fires, which can be very intense and difficult to contain, require strong winds, steep slopes, and large amounts of fuel to burn.

Wildfires are strongly influenced by multiple factors, including:

- **Weather:** Factors such as relative humidity, wind speed, ambient temperature and precipitation all influence the formation and growth of wildfires.
- **Topography:** Natural features, such as canyons or ridges, can increase the spread rate of a fire by funneling or drawing heated air and fire.
- **Fuel Type, Distribution and Moisture:** Available fuels, the spacing and density of available fuels, and fuel moisture content can determine spread rates and intensity of wildfires.
- **Drought Conditions:** Drought tends to increase both the likelihood and severity of wildfires.

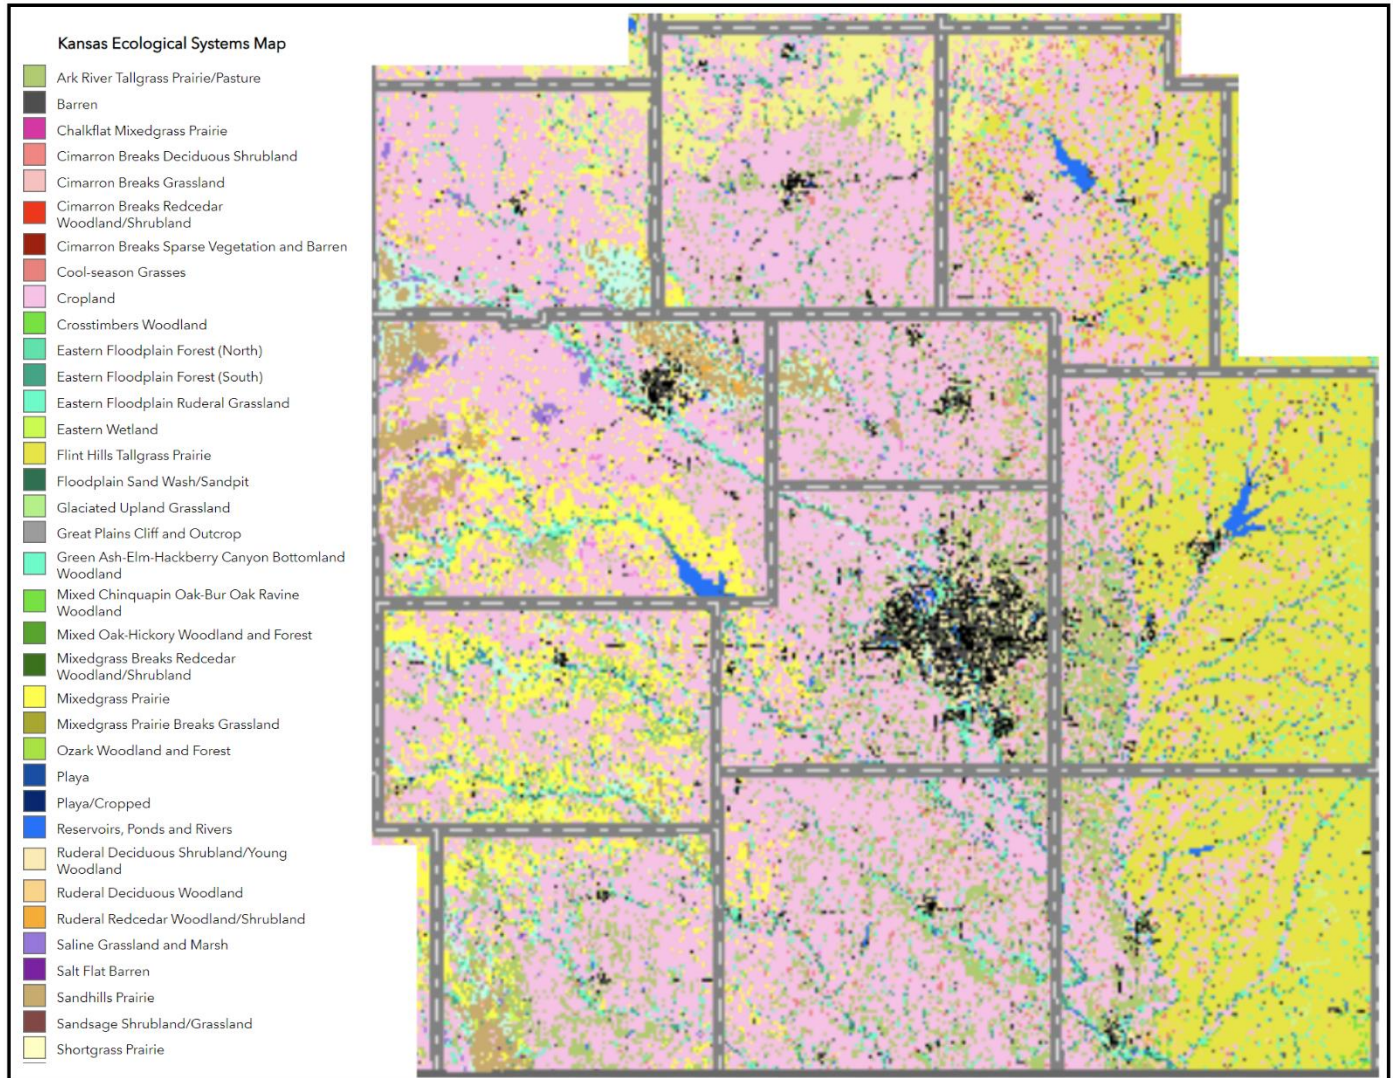

### 4.17.2 – Location and Extent

According to the Office of the State Fire Marshal, in 2021 Kansas fire departments responded to close to 5,000, vegetation-related fires that burned over 185,000 acres. Over 900 of these fires required counties to seek mutual-aid assistance to bring them under control.

According to fire officials, nearly ninety-five percent of all wildfires result from the activity of people and, subsequently, a significant number could be prevented through taking proper actions towards fire safety.

The following map, from the University of Kansas, indicates vegetation types within Kansas Region G, with areas of grasses, forest, and crops more likely to experience a wild or brush fire:

**Chart X: Kansas Region G Vegetation Cover**

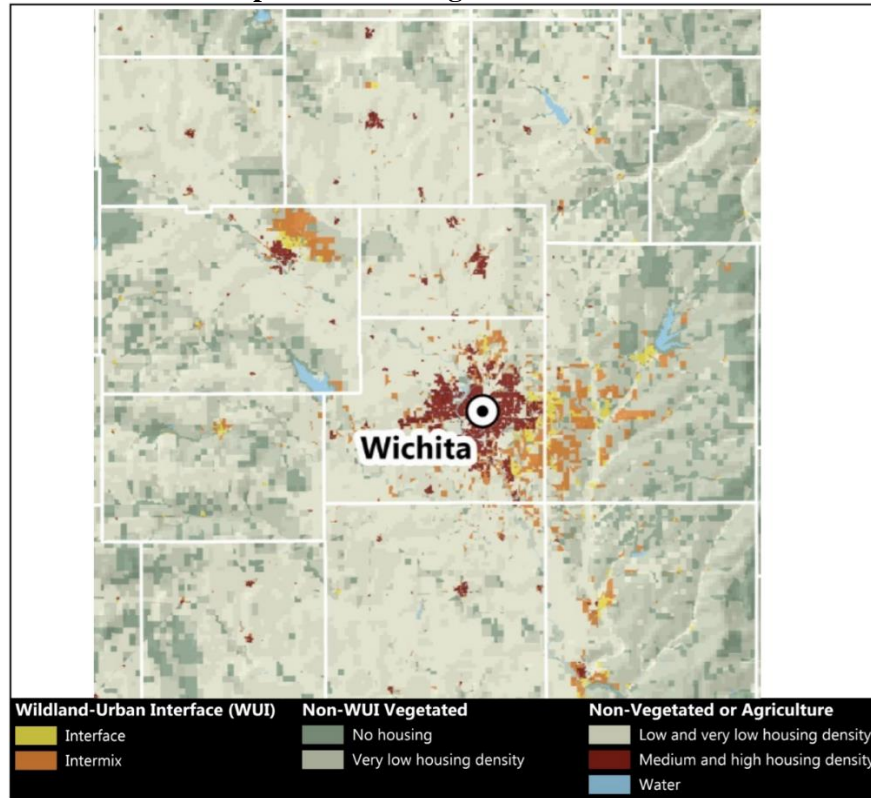

Source: University of Kansas

The wildland/urban interface (WUI) is the area where human improvements such as homes, ranches and farms come in contact with the wildlands. The WUI creates an environment in which fire can move readily between structure and vegetation fuels, often resulting in massive fires, or conflagrations, that may lead to widespread evacuations. The expansion of the WUI in recent decades has significant implications for wildfire management and its impact. There are two types of WUI, intermixed and interface. Intermix WUI are areas where housing and vegetation intermingle, and interface WUI are areas with housing in the vicinity of dense, contiguous wildland vegetation.

The following map, from the University of Wisconsin SILVIS Labs, illustrates WUI areas throughout the Kansas Region G:

**Map X: Kansas Region G WUI Areas**

Source: University of Wisconsin SILVIS Labs

Exposure is the intersection of wildfire likelihood and intensity with communities. Communities can be directly exposed to wildfire from adjacent wildland vegetation, or indirectly exposed to wildfire from embers and home-to-home ignition. Communities that are not exposed are not likely to be subjected to wildfire from either direct or indirect sources. Wildfire exposure is calculated based on wildfire likelihood and proximity to large areas of flammable wildland vegetation. Any community that is located where there is a chance wildfire could occur (in other words, where wildfire likelihood is greater than zero) is exposed to wildfire. Directly exposed homes are located in an area considered to be covered by flammable wildland vegetation. Indirectly exposed homes are located within one mile of a large area considered to be covered by flammable wildland vegetation. Non-exposed homes are located more than one mile from a large area considered to be covered by flammable wildland vegetation. The following map, from NOAA's Wildfire Risk to Communities, indicates the wildfire exposure for Kansas Region G:

**Map X: Kanas Region G Wildfire Exposure**

Source: NOAA's Wildfire Risk to Communities

The duration of a wildfire depends on the weather conditions, how dry it is, the availability of fuel to spread, and the ability of responders to contain and extinguish the fire. Historically, some wildfires have lasted only hours, while other fires have continued to spread and grow for an entire season. They spread quickly and often begin unnoticed until they have grown large enough to signal by dense smoke. If fuel is available, and high wind speeds hit, a wildfire can spread over a large area in a very short amount of time. These factors make the difference between small upstart fires easily controlled by local fire services to fires destroying thousands of acres requiring multiple state and federal assets for containment and suppression.

The National Fire Danger Rating System allows fire managers to estimate today's or tomorrow's fire danger for a given area. It combines the effects of existing and expected states of selected fire danger factors into one or more qualitative or numeric indices that reflect an area's fire protection needs. It links an organization's readiness level (or pre-planned fire suppression actions) to the potential fire problems of the day. The following is a brief explanation of the different fire danger levels based on criteria established by the National Fire Danger Rating System.

**Table 58: National Fire Danger Rating System**

Rating	Description
Low	Fuels do not ignite easily from small embers, but a more intense heat source, such as lightning, may start fires in duff or dry rotten wood. Fires in open, dry grasslands may burn easily a few hours after a rain, but most wood fires will spread slowly, creeping or smoldering. Control of fires is generally easy.
Moderate	Fires can start from most accidental causes, but the number of fire starts is usually pretty low. If a fire does start in an open, dry grassland, it will burn and spread quickly on windy days. Most wood fires will spread slowly to moderately. Average fire intensity will be moderate except in heavy concentrations of fuel, which may burn hot. Fires are still not likely to become serious and are often easy to control.

**Table 58: National Fire Danger Rating System**

Rating	Description
High	Fires can start easily from most causes and small fuels (such as grasses and needles) will ignite readily. Unattended campfires and brush fires are likely to escape. Fires will spread easily, with some areas of high intensity burning on slopes or concentrated fuels. Fires can become serious and difficult to control unless they are put out while they are still small.
Very High	Fires will start easily from most causes. The fires will spread rapidly and have a quick increase in intensity, right after ignition. Small fires can quickly become large fires and exhibit extreme fire intensity, such as long-distance spotting and fire whirls. These fires can be difficult to control and will often become much larger and longer-lasting fires.
Extreme	Fires of all types start quickly and burn intensely. All fires are potentially serious and can spread very quickly with intense burning. Small fires become big fires much faster than at the "very high" level. Spot fires are probable, with long-distance spotting likely. These fires are very difficult to fight and may become very dangerous and often last for several days.

Source: Wildfire Fire Assessment System

The severity of wildfire depends on several quickly changing environmental factors. It is impossible to strategically estimate the severity of a wildfire as these factors, including drought conditions and wind speed, have such a great influence on the wildfire conditions. The Characteristic Fire Intensity Scale within the Southern Wildfire Risk Assessment Summary Report specially identifies areas where significant fuel hazards and associated dangerous fire behavior potential exist based on a weighted average of four percentile weather categories.

The following table details the range of wildfire intensity:

**Table X: Characteristic Fire Intensity Scale**

Class	Description
Class 1- Very Low	Very small, discontinuous flames, usually less than 1 foot in length; very low rate of spread; no spotting. Fires are typically easy to suppress by firefighters with basic training and non-specialized equipment.
Class 2- Low	Small flames, usually less than two feet long; small amount of very short-range spotting possible. Fires are easy to suppress by trained firefighters with protective equipment and specialized tools.
Class 3- Moderate	Flames up to 8 feet in length; short-range spotting is possible. Trained firefighters will find these fires difficult to suppress without support from aircraft or engines, but dozer and plows are generally effective. Increasing potential for harm or damage to life and property.
Class 4 - High	Large Flames, up to 30 feet in length; short-range spotting common; medium range spotting possible. Direct attack by trained firefighters, engines, and dozers is generally ineffective, indirect attack may be effective. Significant potential for harm or damage to life and property
Class 5- Very High	Very large flames up to 150 feet in length; profuse short-range spotting, frequent long-range spotting; strong fire-induced winds. Indirect attack marginally effective at the head of the fire. Great potential for harm or damage to life and property.

Source: Southern Wildfire Risk Assessment Summary Report

#### 4.17.3 Previous Occurrences

FEMA can approve declarations for fire management assistance when the Administrator determines that a fire or fire complex on public or private forest land or grassland threatens such destruction as would constitute a major disaster. The following table details all recorded fire management declarations for Kansas Region G:

**Table X: Kansas Region G Fire Management Declarations**

Designation	Declaration Date	Incident Name	Counties	Public Assistance	Emergency Work
FM-5425-KS	5/5/2022	Kansas Cottonwood Fire Complex	Harvey and Reno	\$464,403	\$59,033
FM-5170-KS	3/5/2017	Kansas Highland Hills Fire	McPherson, Reno, and Rice	\$1,727,559	\$559,070
FM-2632-KS	3/30/2006	Kansas Obee Fire	Reno	-	-

Source: FEMA

Wildfires are a frequent occurrence in both Kansas and Kansas Region G with over 35,000 incidents reported from 2018 to 2023. The majority of these are generally small and quickly contained with recent fire occurrences burning a smaller acreage due to quicker response times, better spotting practices, and stronger management policies. The following table details recent Kansas Region G wildfires that burned over 500 acres, caused damages greater than \$100,000, and/or caused injuries or fatalities:

**Table X: Kanas Region G Wildfires 2018- 2023**

Date	County	Jurisdiction	Total Dollar Loss	Injuries and Fatalities	Acres Burned
10/28/2022	Bourbon	Fulton	\$150,000	0	Not reported
03/28/2023	Cowley	Rock	\$100,000	0	40
03/31/2023	Cowley	Arkansas City	\$250,000	0	Not reported
03/22/2023	Cowley	Dexter	\$130,000	0	Not reported
04/19/2018	Cowley	Dunlap	\$0	0	900
06/13/2022	Cowley	Pleasant Valley	\$0	0	700
03/15/2018	Harper	Anthony	\$2,005,000	0	Not reported
03/06/2018	Harper	Harper	\$0	0	2,100
03/06/2018	Harper	Harper	\$0	0	1,200
03/05/2022	Harvey	Burrton	\$550,000	0	Not reported
07/27/2019	Harvey	Newton	\$175,000	0	Not reported
03/22/2018	Harvey	Putnam	\$0	0	1,508
12/22/2018	Kingman	Kingman	\$0	7	50
03/10/2021	Marion	Burns	\$2,500,000	0	Not reported
04/07/2020	McPherson	Canton	\$0	0	640
04/01/2021	McPherson	Carlton	\$0	0	1,000
03/29/2021	Reno	Hutchinson	\$0	0	600
03/29/2021	Reno	Hutchinson	\$0	0	600
03/29/2021	Reno	Hutchinson	\$0	0	600
03/29/2021	Reno	Hutchinson	\$0	0	600
03/29/2021	Reno	Hutchinson	\$0	0	600
03/05/2022	Reno	Hutchinson	\$3,000,000	0	Not reported
03/05/2022	Reno	Hutchinson	\$500,000	0	Not reported
04/08/2020	Reno	South Hutchinson	\$0	0	1,000
04/01/2021	Rice	Alden	\$500,000	0	80
04/01/2021	Rice	Alden	\$500,000	0	80
04/01/2021	Rice	Alden	\$500,000	0	80
04/01/2021	Rice	Alden	\$500,000	0	80
03/06/2018	Sedgwick	Garden Plain	\$203,100	1	Not reported

**Table X: Kanas Region G Wildfires 2018- 2023**

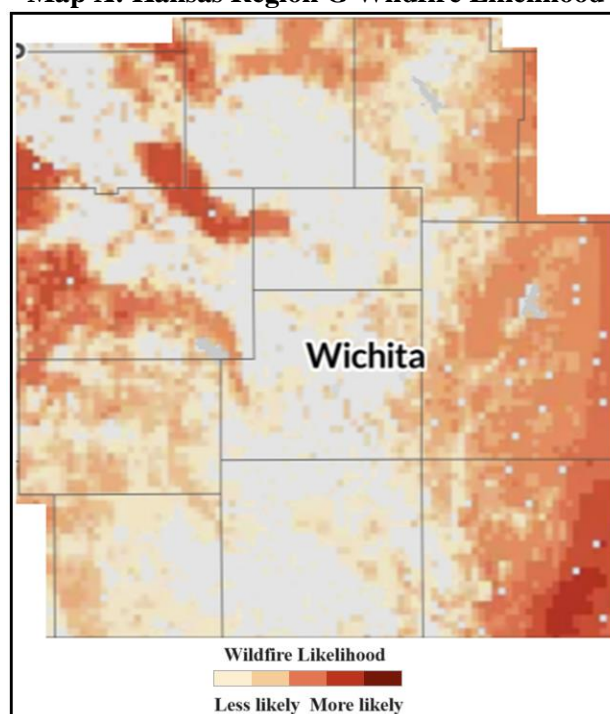

Date	County	Jurisdiction	Total Dollar Loss	Injuries and Fatalities	Acres Burned
03/20/2022	Sedgwick	Goddard	\$15,500	1	Not reported
10/17/2019	Sumner	Conway Springs	\$135,000	0	100

Source: KDEM

#### 4.17.4 Probability of Future Events

Predicting the probability of wildfire occurrences is tremendously challenging due to the large number of factors involved and the random nature of formation. NOAA's Wildfire Risk to Communities mapping, which uses the best available science to identify risk, was used to help determine the probability of future wildfires within Kansas Region G. The following map indicates the likelihood of a wildfire within the Kanas Region G:

**Map X: Kansas Region G Wildfire Likelihood**

Source: NOAA's Wildfire Risk to Communities

#### 4.17.5 Projected Changes in Location, Intensity, Frequency, and Duration

Climate change can result in a significant increase in the likelihood and severity of wildfires. The occurrence of more frequent and longer lasting droughts due to climate change can increase the availability of fuels for wildfires through the drying of vegetation. Additionally, both the increased occurrence and continued decline of native species due to lack of precipitation can cause the proliferation of invasive species which can provide quick-burning fuels that contribute to the start and spread of fire.

Climate change may impact the frequency and magnitude of wildfires in the following ways:

- **Increased Frequency:** Warmer temperatures and prolonged periods of drought associated with climate change create conditions that favor more frequent wildfires. Extended fire seasons are becoming the new norm in many regions.
- **Greater Intensity:** Higher temperatures and drier conditions can lead to more intense wildfires. These fires burn hotter and spread more rapidly, making them more challenging to control and extinguish.

- **Longer Fire Seasons:** Climate change is extending the length of fire seasons, leading to earlier starts and later endings. This puts additional stress on firefighting resources and increases the risk of wildfires overlapping with other disasters.
- **Altered Precipitation Patterns:** Changes in precipitation patterns, including more intense rainfall events followed by extended dry periods, can promote the growth of vegetation, which can then become fuel for wildfires during subsequent dry periods.
- **Drought Conditions:** Prolonged droughts associated with climate change reduce soil moisture levels and the availability of water sources. Dry conditions increase the susceptibility of vegetation to ignition.
- **Vegetation Changes:** Climate change can alter the distribution and composition of vegetation, such as the expansion of drought-tolerant species. This can change fuel availability and make ecosystems more fire-prone.
- **Insect Infestations:** Warmer temperatures can lead to increased insect infestations in forests. Infested and dead trees provide additional fuel for wildfires.
- **Wildfire Behavior:** Climate change can lead to changes in wildfire behavior, including the development of fire whirls, more extreme fire behavior events, and increased spotting (the spread of embers ahead of the main fire).

Compounding the potential future impact of this hazard, local discussions indicate that a continued staffing shortage and aging equipment in the majority of regional fire departments may hamper future response activities.

#### **4.17.6 Vulnerability and Impact**

Wildfires can have significant and often devastating impacts on people and communities. These impacts can vary depending on the wildfire's intensity, size, path, and the preparedness of the affected area, and may include.

- **Injuries and Fatalities:** Wildfires can lead to injuries and fatalities among residents, firefighters, and emergency responders due to burns, smoke inhalation, and accidents during firefighting efforts.
- **Evacuations and Displacement:** Wildfire damage can force people to leave their homes, leading to temporary or even long-term displacement. Some may require emergency shelter and assistance from relief organizations.
- **Property Loss:** Wildfires can cause extensive property damage to homes, businesses, and vehicles.
- **Health Risks:** Smoke from wildfires can contain harmful pollutants, including fine particulate matter and toxic gases, which can lead to respiratory problems and exacerbate pre-existing health conditions. Vulnerable populations, such as children and the elderly, are at higher risk.
- **Mental Health Impact:** The trauma and stress associated with experiencing a wildfire, evacuations, property loss, and the challenges of recovery can have a significant impact on mental health.
- **Emergency Response Challenges:** Wildfires can strain emergency response resources, including firefighting personnel, equipment, and medical facilities. First responders may be faced with a large number of emergency calls.
- **Economic Costs:** Wildfires result in economic costs, including property damage and insurance claims.

Additionally, wildfires can devastate communities and homes. They can cause various types of property damage, including burning structures, charring of exterior surfaces, and damage to roofs, walls, and windows. The heat generated by wildfires can weaken or melt building materials. In extreme cases, wildfires can completely destroy homes, reducing them to ashes and rubble. Homes that may not have been directly impacted by the fire may also be affected. Wildfires can damage utility infrastructure, including power lines and gas pipelines, leading to utility interruptions that affect homes and residents. They can damage or contaminate water supply infrastructure, affecting access to clean water for drinking, firefighting, and sanitation.

The following map, from NOAA's Wildfire Risk to Communities, indicates the wildfire risk to homes in Kansas Region G:

**Map X: Kansas Region G Wildfire Risk to Homes**

Source: NOAA's Wildfire Risk to Communities

Wildfires can have wide-ranging impacts on critical infrastructure. They can damage electrical transmission and distribution lines, transformers, and power substations. This can lead to widespread power outages, affecting homes, businesses, hospitals, and emergency response capabilities. Damage cell towers, telephone lines, and other communication infrastructure can hinder emergency response efforts, as well as the ability of individuals to call for help or communicate with loved ones. Wildfires can block roads with debris, making them impassable and hindering emergency response and evacuation efforts.

Hospitals and healthcare facilities may be damaged or rendered inoperable during wildfires, affecting the ability to provide medical care during a disaster. Fire stations, police stations, and emergency operation centers may be damaged or destroyed, impacting the ability of first responders to coordinate disaster response efforts. Damage to emergency shelters and housing facilities can disrupt services which are critical for providing temporary shelter to displaced individuals and families.

Wildfires can have varied impacts on the environment. These impacts are often destructive and can affect ecosystems, wildlife, natural resources, and even the local climate. They can destroy natural habitats, including forests, grasslands, wetlands, and shrublands. This can have devastating effects on wildlife species that depend on these ecosystems for shelter, food, and breeding. Wildfires can harm or displace wildlife, resulting in injury or death. They can force wildlife to flee their habitats, leading to displacement and potential conflicts with human populations. Animals may struggle to find suitable new habitats. Post-fire landscapes are often vulnerable to colonization by invasive plant species, which can outcompete native vegetation and disrupt ecosystem functions.

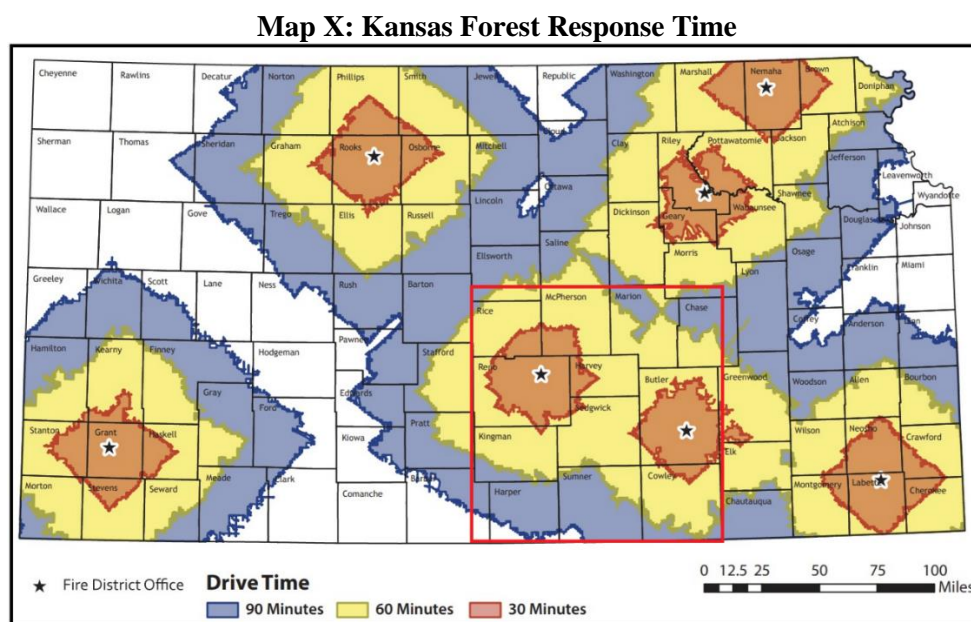

Wildfires can have significant impacts on government operations, which may include:

- **Emergency Response and Public Safety:** Wildfires can lead to a surge in emergency calls for services related to accidents, injuries, and damaged structures. Agencies involved in emergency response must mobilize additional resources to handle these demands.

- **Emergency Operations Centers:** Wildfire often require the activation of Emergency Operations Centers to coordinate emergency response efforts. These centers serve as hubs for communication, resource allocation, and decision-making during disasters.
- **Infrastructure Damage:** Wildfires can cause extensive damage to critical infrastructure, including roads, bridges, schools, government buildings, and utility facilities. This damage can disrupt government operations and hinder transportation and communication.
- **Budgetary Impact:** The costs associated with emergency response efforts, disaster recovery, and infrastructure repair can strain budgets.
- **Resource Allocation:** Local governments must allocate resources, including personnel, equipment, and stockpiled supplies, to support emergency response and recovery efforts.
- **Communication Challenges:** Wildfires can disrupt communication networks, hindering the ability of government agencies to communicate internally and with the public. This can impact emergency notifications and coordination efforts.
- **Economic Impact:** The destruction of infrastructure and businesses can have significant economic consequences for local communities, including job losses and reduced economic activity.
- **Public Services:** Wildfires can disrupt the delivery of public services, including transportation, utilities, and social services, affecting the well-being of residents.

The Kansas Forest Service operates seven full-time district offices with fire staff to serve firefighters and communities in wildland fire efforts. The following map illustrates the anticipated response time for these staff to reach Kansas Region G communities when requested by local resources:

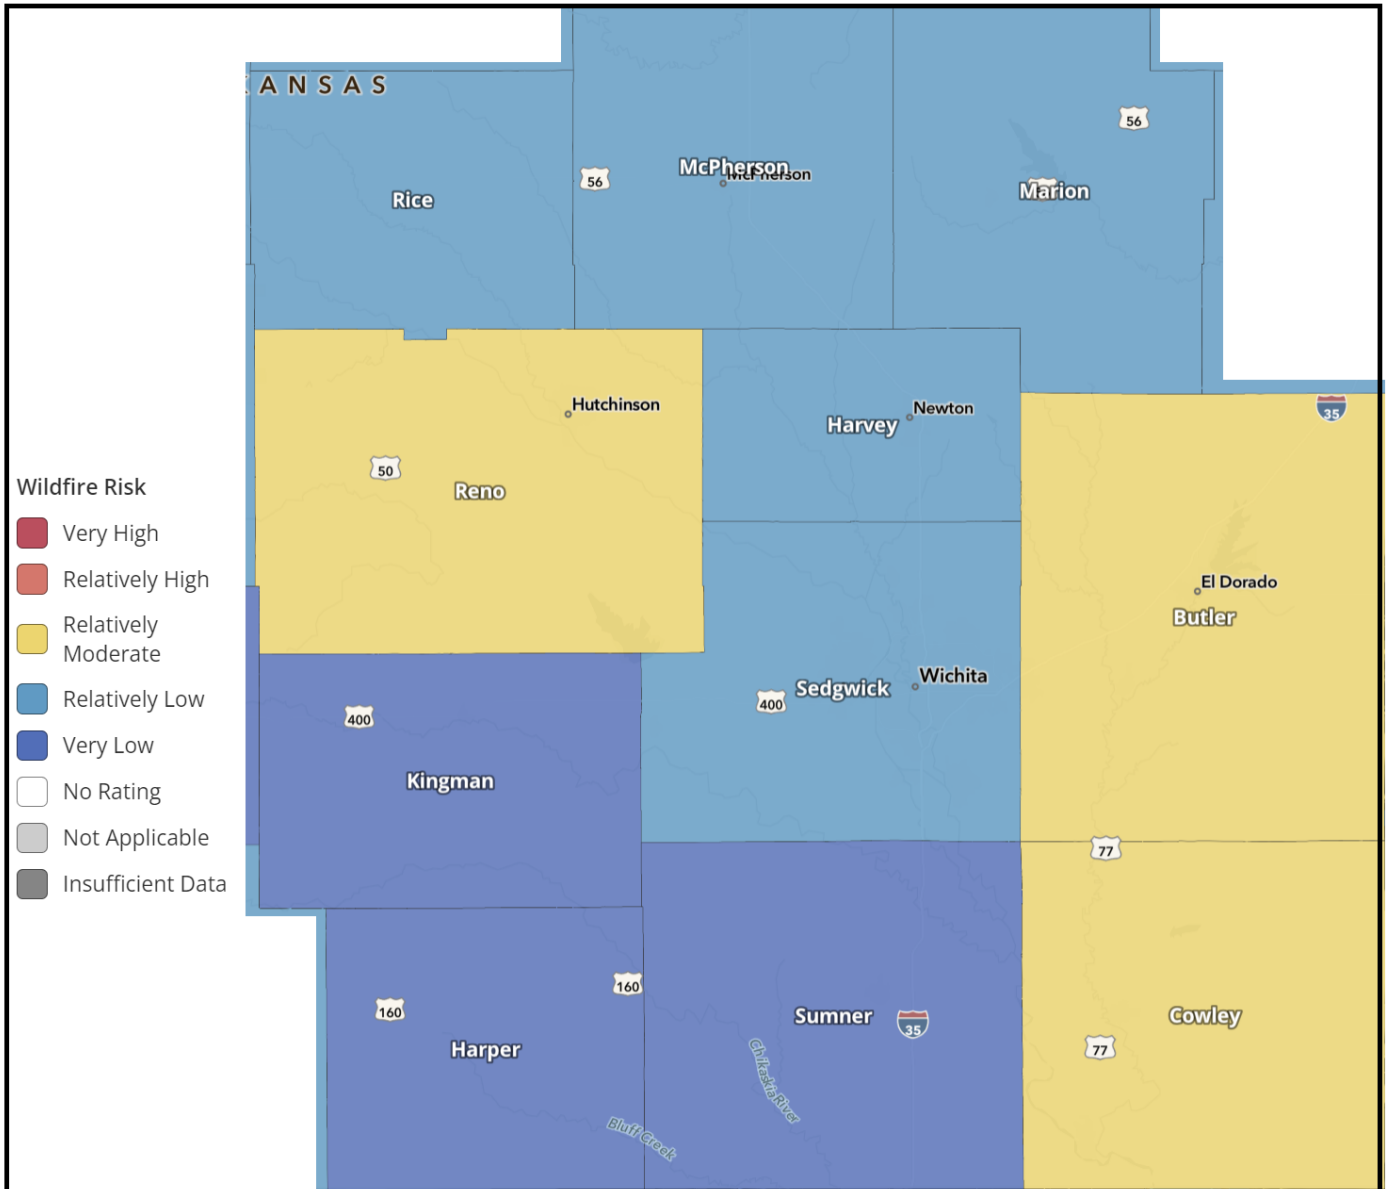

Source: Kansas Forest Service

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating counties from tornadoes:

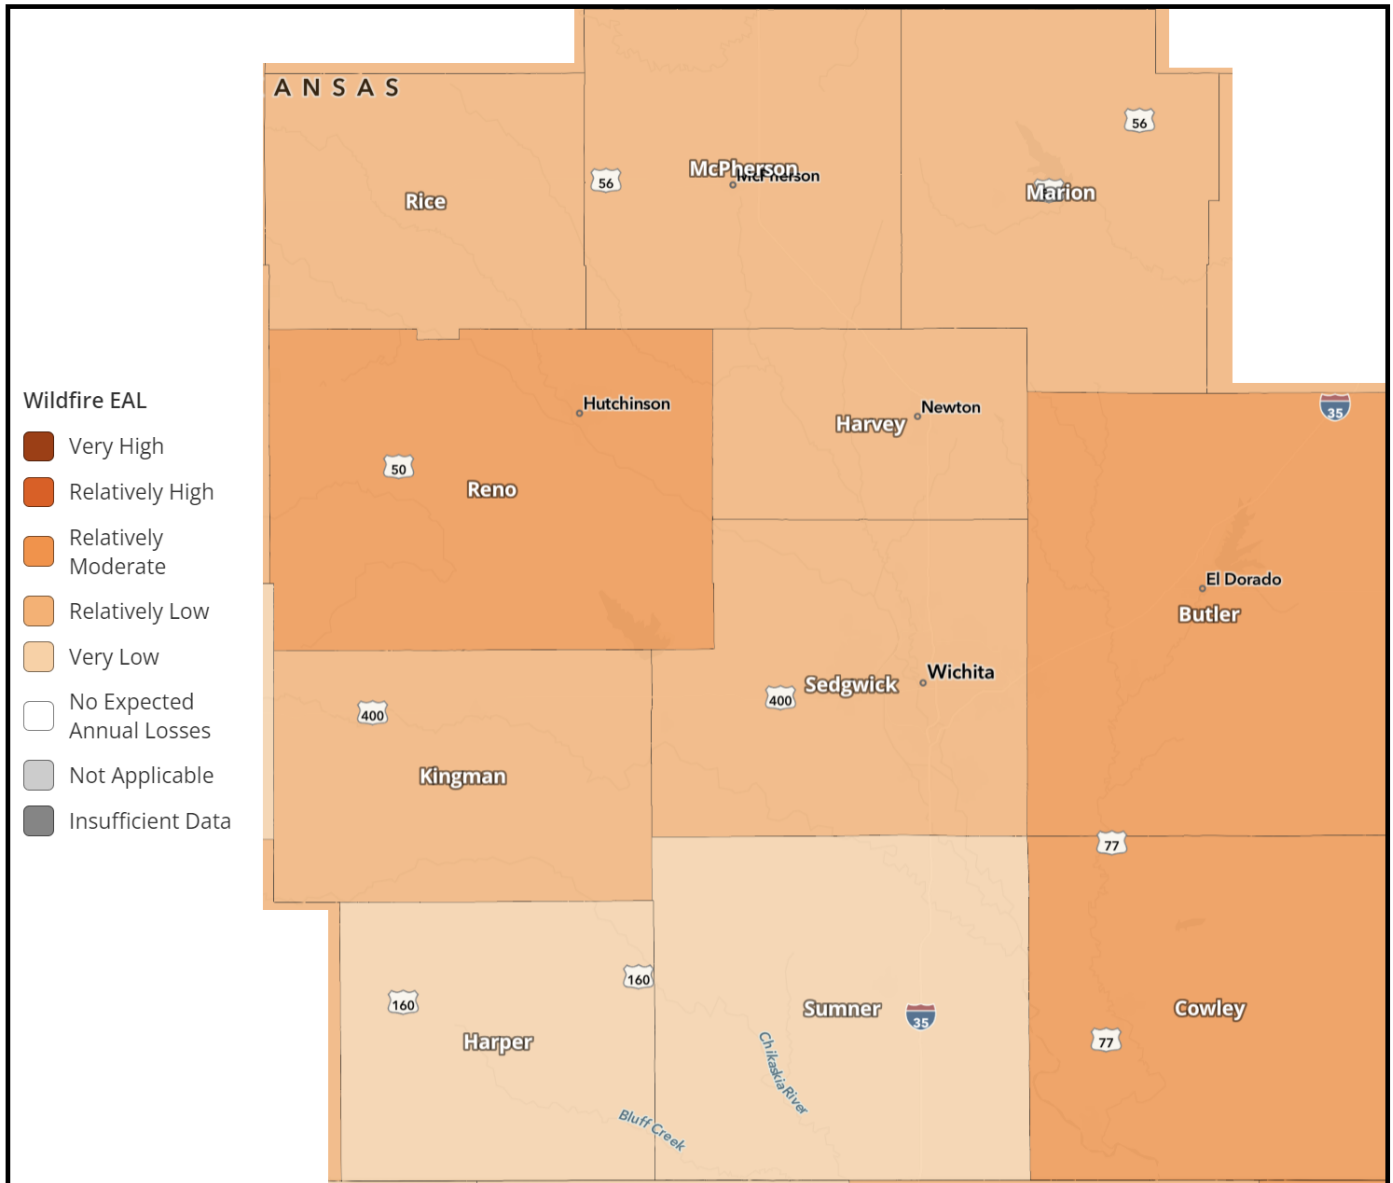

**Map X: Kansas Region G FEMA NRI Wildfire Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for wildfires for participating counties within Kansas Region G:

**Map x: Kansas Region G FEMA NRI Wildfires EAL**

Source: FEMA NRI

The following table indicates the FEMA NRI and EAL analysis for each participating Kansas Region G county for wildfire:

**Table X: Kansas Region G FEMA NRI and EAL for Wildfire by County**

County	Risk Index	EAL
Butler	Relatively Moderate	Relatively Moderate
Cowley	Relatively Moderate	Relatively Moderate
Harper	Very Low	Very Low
Harvey	Relatively Low	Relatively Low
Kingman	Very Low	Relatively Low
Marion	Relatively Low	Relatively Low
McPherson	Relatively Low	Relatively Low
Reno	Relatively Moderate	Relatively Moderate
Rice	Relatively Low	Relatively Low
Sedgwick	Relatively Low	Relatively Low
Sumner	Very Low	Very Low

Source: FEMA NRI

**Consequence Analysis**

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Wildfire Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	People located in the immediate area of the fire face the risk injury or death if not evacuated in time. Once evacuated, they may face lengthy period of relocation. Fires can release toxic components which can cause adverse health effects including respiratory and cardiovascular system impacts. Psychological and psychiatric concerns may arise due to exposure to the traumatic event. Young children and the elderly are especially vulnerable to health issues stemming from fire and smoke exposure.
Impact on Responders	Fire, police, and emergency responders may be called to evacuate people from the fire area, close roads, create fire breaks, attend to the injured, and direct traffic. Firefighters are at a higher risk of smoke inhalation, burns, and health problems due to working in close proximity to fires and the subsequent smoke.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. Wildfires may impact an agency's ability to maintain continuity of operations due to impacts on critical infrastructure.
Delivery of Services	Fires can cause disruption of services, including the ability to deliver goods and services. Impacts on operations could lead to a reduction or cessation of services. Goods and facilities may be damaged or destroyed by fire, smoke, or extremely high temperatures.
Property, Facilities, and Infrastructure	Fire can damage or completely destroy property and critical facilities, as well as lead to interruption of the power supply system. A fire of significant strength can cause major damage to buildings or farmland. Large fires may also interrupt transportation systems such as train and bus lines, creating a challenge for public transit and evacuation.
Impact on Environment	Fires can cause significant impact to the environment by spreading pollution, damaging agricultural crops, and disturbing the wildlife and natural areas. Water and soil pollution caused by fire can cause longer term threats to ecosystem health. Fire damage may also affect soil formation, nutrient cycling, and carbon sequestration and storage.
Economic Conditions	Fires can cause a fiscal impact on the local government, even if costs can be recouped by federal grants. Agriculture is a major component of the local, county and state

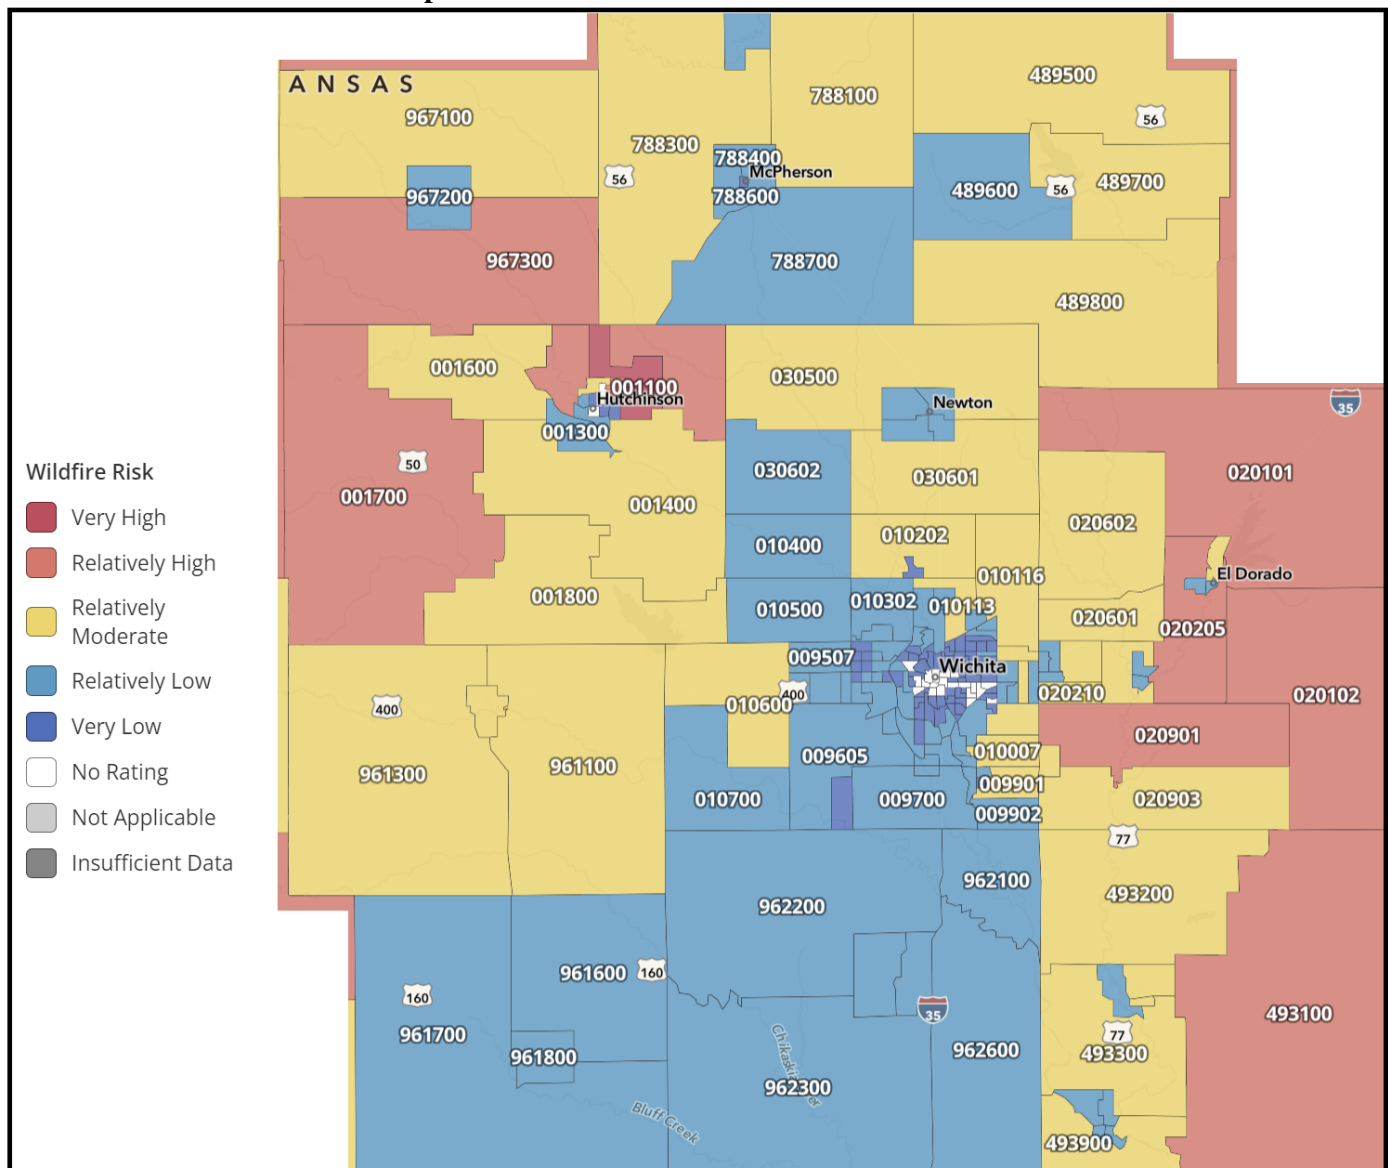

Table x: Wildfire Consequence Analysis	
Subject	Potential Impacts
	economy, and major fires could cause significant impact. Costs may be associated with loss of income, damage to property, firefighting can be significant.
Public Confidence in Governance	Governmental response, on all levels , state and local, would require direct action that must be immediate and effective to maintain public confidence.

#### 4.17.7 Jurisdictional Risk and Vulnerability

To help understand the risk and vulnerability to earthquakes of participating jurisdictions mapping from the FEMA NRI was run on a census tract level. As the NRI does not generate mapping for individual jurisdictions, census tract analysis is the closest analogue available to understand individual jurisdiction conditions.

Using the FEMA NRI, and consisting of three input components (expected annual loss, social vulnerability, and community resilience), the following map was created indicating the potential risk to participating jurisdictions (as indicated by census tract) from wildfires:

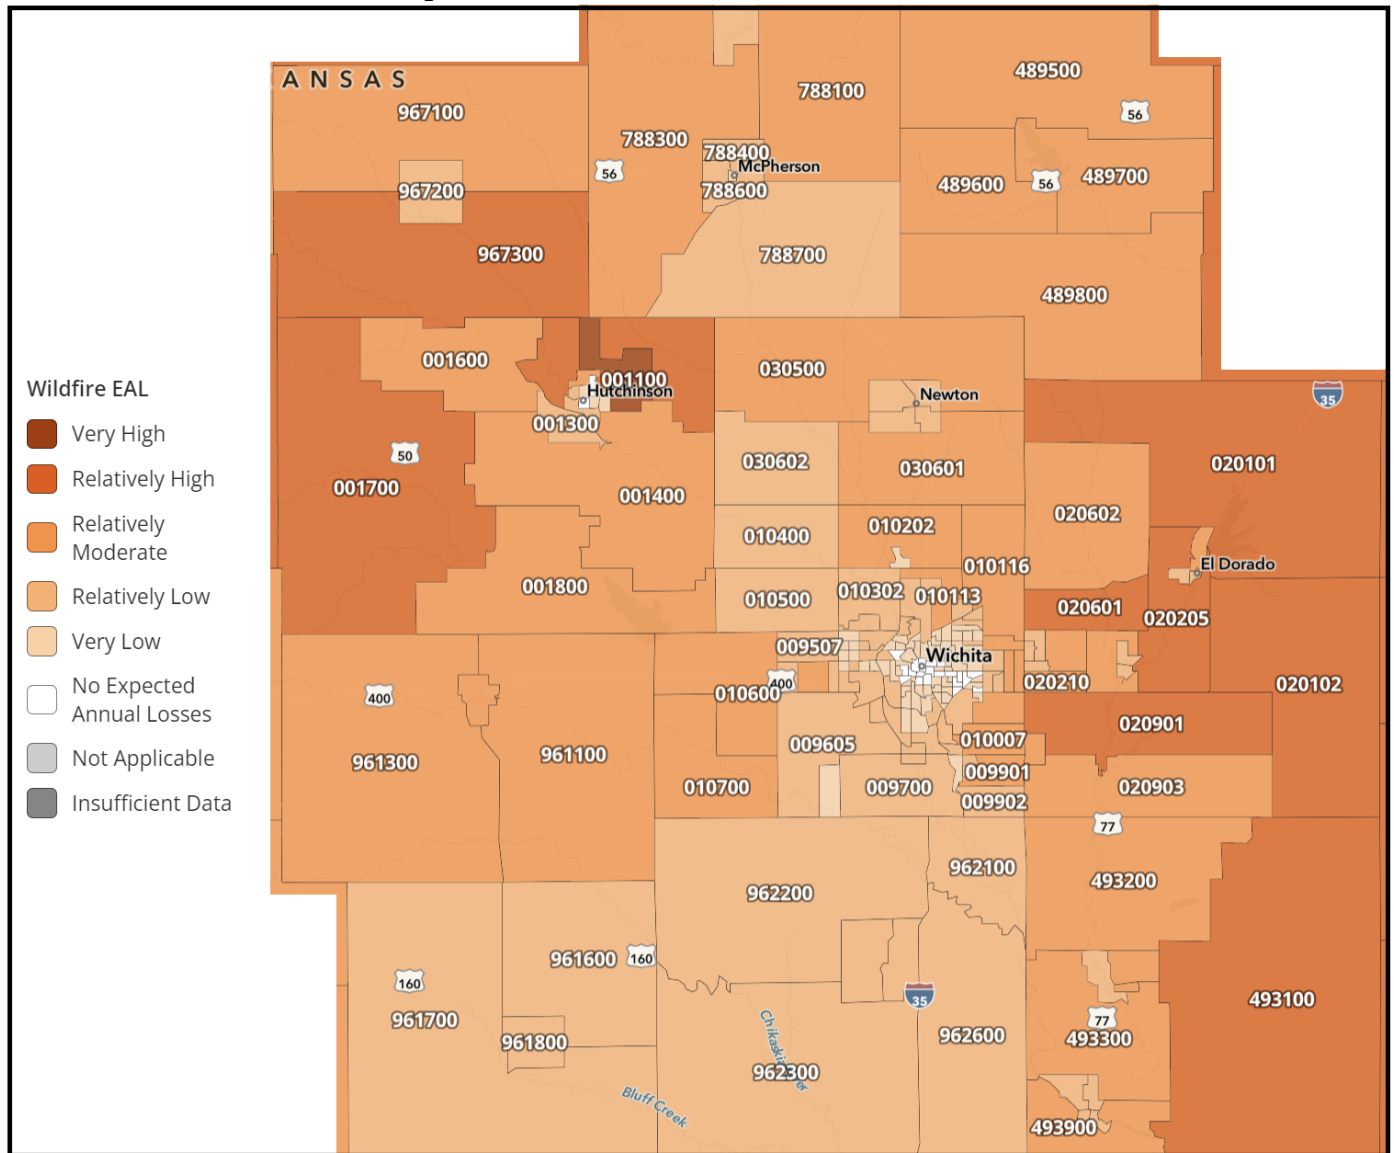

**Map 24: FEMA NRI Jurisdictional Wildfires Risk**

Source: FEMA NRI

As part of the NRI, EAL represents the average economic loss in dollars resulting from natural hazards each year and is proportional to a community's risk. The following map indicates the EAL for wildfires for participating jurisdictions (as indicated by census tract) within Kansas Region G:

**Map 25: FEMA NRI Jurisdictional Wildfires EAL**

Source: FEMA NRI

## 4.18 Cybersecurity Event

### 4.18.1 Hazard Description

Cybersecurity attack refers to a deliberate and malicious attempt to compromise the security of computer systems, networks, devices, or data. The primary objectives of cyberattacks can vary widely and may include gaining unauthorized access, stealing sensitive information, disrupting operations, or extorting payment. Cybersecurity threat actors can be classified as:

- Hacktivists: Loosely organized groups known for conducting distributed denial-of-service attacks and defacing websites to promote political or social causes.
- Ransomware Operators: Criminal groups use ransomware to encrypt victims' data and demand ransoms for decryption keys.
- Malware Developers: Individuals or groups create and distribute malicious software (malware) for profit.
- Organized Crime: Criminal organizations may engage in various forms of cybercrime, such as identity theft, credit card fraud, and hacking for profit.
- Advanced Persistent Threat Groups: Nation-state-sponsored groups are among the most sophisticated threat actors. They conduct long-term, highly targeted cyber espionage campaigns.

### 4.18.2 – Location and Extent

The entire state is vulnerable to cybersecurity incidents. As most day-to-day activities rely on the internet in one aspect or another, any person or infrastructure is susceptible to cybersecurity threats. Cyber-attacks can take various forms, each with its own tactics and techniques, and include:

- Malware Attacks: Malicious software, such as viruses, worms, Trojans, ransomware, and spyware, is used to infect and compromise a computer or network. Malware can cause damage, steal information, or provide unauthorized access.
- Phishing Attacks: Phishing attacks involve tricking individuals into revealing sensitive information, such as passwords or financial details, by posing as a legitimate entity. Phishing emails, websites, and messages are common tools for attackers.
- Denial-of-Service Attack: An attack that overwhelms a target system or network with traffic, rendering it inaccessible.
- Distributed Denial-of-Service Attack: An attack that involve multiple compromised devices (a botnet) flooding a target with traffic, making it impossible to function effectively.
- Man-in-the-Middle Attacks: In these attacks, an attacker intercepts and possibly alters communications between two parties without their knowledge. This can lead to data interception, eavesdropping, or impersonation.
- SQL Injection Attacks: Attackers inject malicious SQL code into input fields of a web application to manipulate a database, potentially gaining unauthorized access or extracting data.
- Zero-Day Vulnerabilities: Attackers leverage security vulnerabilities in software or hardware that are not yet known to the vendor or public. These vulnerabilities are known as "zero-days."
- Brute Force: Attackers attempt to gain access to an account or system by trying all possible password combinations until the correct one is found.
- Dictionary Attacks: Attackers use precompiled lists of common passwords to guess login credentials.
- Social Engineering Attacks: This involves manipulating individuals into divulging confidential information or performing actions that compromise security. It often relies on psychological manipulation.
- Ransomware Attacks: Attackers encrypt a victim's data and demand a ransom in exchange for the decryption key. Payment does not guarantee data recovery, and it encourages further attacks.

- **Insider Attacks:** Malicious or negligent actions by individuals within an organization can pose significant cybersecurity risks, as they may have access to sensitive information and systems.
- **Supply Chain Attacks:** Attackers target suppliers, vendors, or partners to compromise the security of products or services, which can affect downstream organizations and consumers.
- **Internet of Things Attacks:** Devices connected to the internet, such as smart appliances and sensors, can be targeted to gain unauthorized access or control.

#### **4.18.3 Previous Occurrences**

Kansas Region G has experienced numerous cyber-attacks over the past few years. In general, jurisdictions impacted by cyber-attacks have elected not to publicize these events as part of this HMP.

#### **4.18.4 Probability of Future Events**

The continued evolution of cyber criminals and nation sponsored groups indicates that the probability of future events is significant. Although the Kansas Region G has not experienced a large-scale cybersecurity incident, large-scale attacks occur worldwide on a regular basis. The number of attacks is projected to increase, especially on critical infrastructure. Additionally, due to the widespread use of computers, email, and the internet, and the reliance on technology to support daily functions, the risks of cybersecurity incidents will continue to grow.

#### **4.18.5 Projected Changes in Location, Intensity, Frequency, and Duration**

Predicting the exact future changes in the frequency and intensity of cyber-attacks is challenging due to the rapidly evolving nature of threats, the expanding diversity of attack vectors, and the dynamic landscape of technology. Cyber criminals are likely to continue evolving their tactics, techniques, and procedures to become more sophisticated. This includes the use of advanced malware, ransomware, and targeted attacks that exploit vulnerabilities in both technology and human behavior.

Future geopolitical landscape conditions can influence the location and targeting of cyber-attacks. Nation-state actors may shift their focus based on political tensions, economic interests, or strategic objectives. Critical infrastructure, government entities, and corporations may be primary targets.

#### **4.18.6 Vulnerability and Impact**

Cybersecurity attacks can have a range of potential impacts on individuals, both direct and indirect, often affecting their finances and privacy. Some of the potential impacts of a cybersecurity attack may include:

- **Theft of Funds:** Attackers may steal money from victims' bank accounts or cryptocurrency wallets.
- **Credit Card Fraud:** Stolen credit card information can be used for unauthorized purchases.
- **Identity Theft:** Attackers may steal personal data, such as Social Security numbers, addresses, and dates of birth, to commit identity theft.
- **Opening Fraudulent Accounts:** Cybercriminals can use stolen information to open credit cards, loans, or other financial accounts in the victim's name.
- **Data Exposure:** Personal or sensitive information may be exposed, leading to loss of privacy and potential embarrassment or harm.
- **Blackmail or Extortion:** Attackers may use compromising information to blackmail or extort victims.

The impact of a cybersecurity attack on people can be far-reaching, affecting various aspects of their lives. Timely detection, response, and preventive measures, such as strong passwords, cybersecurity awareness, and software updates, are essential to mitigate these risks.

Cybersecurity attacks can have wide-ranging impacts on facilities, including critical infrastructure, industrial facilities, government buildings, and data centers. The extent of these impacts depends on the type and sophistication of the attack, the facility's level of cybersecurity preparedness, and the criticality of the systems and operations involved. Potential impacts may include:

- **Disruption of Operations:** Cyberattacks can lead to the disruption of facility operations, causing downtime that can be costly and disruptive.
- **Production Delays:** Manufacturing and industrial facilities may experience delays in production processes, affecting supply chains and delivery schedules.
- **Revenue Loss:** Downtime and operational disruptions can result in financial losses due to lost sales, contracts, or customer trust.
- **Remediation Costs:** Facilities must invest in cybersecurity measures and incident response efforts, incurring additional costs.
- **Data Breach:** Facilities that store sensitive data, such as customer information or proprietary research, may suffer data breaches, leading to data loss or theft.
- **Regulatory Penalties:** Compliance violations and regulatory fines may be imposed for failing to protect sensitive data.
- **Physical Safety Risks:** Attacks on critical infrastructure facilities, such as power plants or water treatment plants, can pose physical safety risks to the public and the environment.
- **Industrial Accidents:** Industrial control systems attacks can lead to accidents or malfunctions with serious safety implications.
- **Loss of Control:** Cyberattacks targeting operational technology systems can lead to a loss of control over critical processes, affecting safety and efficiency.

Attacks on facilities with environmental controls can lead to environmental damage, such as chemical spills or pollution which can affect the surrounding ecosystem and wildlife.

Cyberattacks on government operations can have wide-ranging impacts on the services provided to citizens. The effects of these attacks can vary depending on factors like the type of attack, the target's level of cybersecurity readiness, and the criticality of the systems involved, and may include:

- **Disruption of Government Services:** Cyberattacks can disrupt government services, leading to delays in processing applications, issuing licenses, or providing essential public services.
- **Website Downtime:** Government websites may become inaccessible, hindering access to information and online services.
- **Financial Costs:** States may incur significant expenses related to incident response, system recovery, and cybersecurity improvements.
- **Loss of Revenue:** Disrupted services can lead to revenue losses, impacting budgets and financial stability.
- **Confidential Data Exposure:** Cyberattacks can result in the exposure of sensitive citizen and employee data, including Social Security numbers, health records, and financial information.
- **Regulatory Penalties:** Non-compliance with data protection regulations can lead to penalties and legal consequences.
- **Election Integrity:** Attacks on election systems can compromise the integrity of elections, eroding trust in the democratic process.
- **Emergency Response:** Cyberattacks on public safety and emergency response systems can hinder responses to disasters or crises.
- **Reputation Damage:** Publicized cyberattacks can damage citizens' trust in government agencies and institutions.
- **Legal and Regulatory Consequences:** Jurisdictions may face legal liability for cybersecurity incidents, leading to lawsuits, fines, and settlements.

### Consequence Analysis

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Cybersecurity Incident Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	The public is heavily reliant on technology for daily life. Any disruption to this technology caused by a cyber incident could impair the ability to conduct activities such as communications and mobile banking. Although mostly indirect, public health impacts may include loss of access of important medical information and services, personal information, and unwanted sharing of that information. Disruption in attaining medical help or resources may delay receiving proper medical attention or care.
Impact on Responders	If a cybersecurity incident were to directly impact the communications infrastructure relied upon by first responders it would create severe disruptions in the ability to provide response services. If a cybersecurity event were to affect the 911 operations, response capabilities would be impacted significantly increasing critical response times.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. A cybersecurity event may impact an agency's ability to maintain continuity of operations based on the hazard's potential to impact power or communications infrastructure. Specifically, agencies that rely on electronic backup of critical files are vulnerable to cyber incidents. A cyber incident that disrupts access to technology at both the primary and alternative facilities would be catastrophic.
Delivery of Services	The delivery of goods and services is heavily reliant on technology for the facilitation of transactions. A cyber incident could significantly disrupt the delivery of goods and services for businesses that rely on technology for the delivery of their materials.
Property, Facilities, and Infrastructure	Property and facilities may become either unusable as a result of a cyber incident, particularly if their infrastructure is reliant on technology for sustainability. In addition, a significant majority of critical infrastructure systems are tied to technology through virtual operations and supervisory control and data acquisition systems. A cyber incident could disable the majority of systems which control critical infrastructure, as well as traffic control, dispatch, utility, and response systems.
Impact on Environment	Targeted cyber incidents can impact water or wastewater treatment facilities. The disruption of the systems tied to this infrastructure could cause water pollution or contamination. In addition, a cyber incident could impact the environment if a release of a hazardous material was triggered as a cascading effect of the incident.
Economic Conditions	A significant cyber incident could have ramifications on the state economy. Society is heavily reliant on electronic-based commerce through mobile banking, automated teller machines, and electronic trading. Any disruption to daily activities by a cyber incident could effectively halt the ability to conduct transactions electronically.
Public Confidence in Governance	In the case of a cyber incident in which significant amounts of data is stolen, the government's inability to protect confidential personal data would impact confidence. Such an incident would also subsequently cause pause regarding the security of using electronic systems for government services.

#### 4.18.7 Hazard Planning Significance

Utilizing the above detailed formula for calculating the hazard planning significance for human caused and technological hazards, the following table details the rating of each criterion along with a composite rating:

**Table: Cyber Security Incident Planning Significance**

<b>County</b>	<b>Probability</b>	<b>Magnitude</b>	<b>Warning Time</b>	<b>Duration</b>	<b>Score</b>	<b>Planning Significance</b>
Butler	4	3	3	3	3.5	High
Cowley	4	3	3	3	3.5	High
Harper	4	3	3	3	3.5	High
Harvey	4	3	3	3	3.5	High
Kingman	4	3	3	3	3.5	High
Marion	4	3	3	3	3.5	High
McPherson	4	3	3	3	3.5	High
Reno	4	3	3	3	3.5	High
Rice	4	3	3	3	3.5	High
Sedgwick	4	3	3	3	3.5	High
Sumner	4	3	3	3	3.5	High

## 4.19 Hazardous Material Incident

### 4.19.1 Hazard Description

Hazardous materials are any substances that pose a risk to health, life, or property when released or improperly handled. Generally, the term refers to materials with hazardous chemical or physical properties, though sometimes biological agents can fall under this category. The basic types of hazardous materials may be categorized according to more than six different systems; but the categories of U.S. Emergency Planning and Community Right-to-Know Act (42 U.S.C. 11002) provide a general guide to hazardous materials:

- **Extremely Hazardous Substances:** Materials that have acutely toxic chemical or physical properties and may cause irreversible damage or death to people or harm the environment if released or used outside their intended use.
- **Hazardous Substances:** Materials posing a threat to human health and/or the environment, or any substance designated by the EPA to be reported if a designated quantity of the substance is spilled into waterways, aquifers, or water supplies or is otherwise released into the environment.

### 4.19.2 – Location and Extent

All of Kansas Region G is vulnerable to hazardous materials incidents. Hazardous materials incidents are generally classified as:

- **Fixed Facility Incidents:** Commercial Facilities and Superfund Sites
- **Transportation Incidents:** Highway, Railway, Pipeline, Air, and Water

Tier II facilities, also known as Tier II Reporting facilities, refer to certain types of industrial or commercial establishments that are required to report information about the hazardous chemicals they store or use. This reporting is mandated under the Emergency Planning and Community Right-to-Know Act under Section 312. Key factors in Tier II reporting include:

- **Hazardous Chemicals:** Tier II facilities are those that store or use hazardous chemicals in quantities that meet or exceed specific thresholds established by EPCRA. Hazardous chemicals can include substances such as flammable liquids, toxic gases, and corrosive materials.
- **Reporting Thresholds:** Facilities must report if they have a quantity of any hazardous chemical at the facility that equals or exceeds established thresholds. These thresholds can vary depending on the specific chemical and are typically set in terms of pounds (or a lower threshold for Extremely Hazardous Substances).
- **Reporting Frequency:** Tier II reports must be submitted annually to the State Emergency Response Commission, the Local Emergency Planning Committee, and local fire department.
- **Information Required:** Tier II reports must include detailed information about the hazardous chemicals stored or used at the facility, including the chemical name, location on the site, quantities, and specific health and physical hazards.
- **Community Right-to-Know:** In addition to assisting emergency responders, Tier II reporting also serves the "Community Right-to-Know" aspect of EPCRA, allowing the public to access information about hazardous chemicals in their communities. This information is typically made available through public databases.
- **Enforcement:** Non-compliance with Tier II reporting requirements can result in penalties and fines. Facilities are responsible for ensuring accurate and timely reporting.

Transportation-related hazardous materials incidents can encompass a wide range of scenarios involving the transportation of hazardous materials, including chemicals, flammable substances, radioactive materials, and other

dangerous goods. These incidents can occur during the movement of these materials by road, rail, or air. These transportation-related hazardous materials incidents can include:

- **Chemical Spills on Highways:** Accidents involving trucks carrying hazardous chemicals can result in spills on highways. This can lead to the release of toxic, flammable, or corrosive substances, posing risks to people, the environment, and emergency responders.
- **Train Derailments:** Train derailments can result in the release of hazardous materials from tanker cars. These incidents can occur on both freight and passenger rail lines and may involve chemicals, fuels, or other hazardous substances.
- **Aircraft Hazmat Incidents:** Cargo planes and commercial aircraft can carry hazardous materials as cargo. Incidents may involve leaks, fires, or other issues related to hazardous materials on board.
- **Marine Spills:** Incidents involving the transport of hazardous materials by sea can lead to marine spills. These spills may involve oil, chemicals, or other substances, and can have significant environmental and economic consequences.
- **Pipeline Leaks:** Pipelines transport hazardous liquids and gases over long distances. Leaks or ruptures in pipelines can result in the release of hazardous materials into the environment.
- **Radiological Transport Incidents:** The transport of radioactive materials, including medical isotopes and nuclear fuel, carries the risk of accidents that can result in the release of radioactive substances. These incidents can have serious health and environmental consequences.
- **Chemical Fires in Transit:** Fires in transit vehicles carrying hazardous chemicals can be particularly challenging to control. The fire may cause chemical reactions, leading to toxic smoke or explosions.
- **Cargo Container Incidents:** Shipping containers transported by truck or rail can contain hazardous materials. Incidents involving these containers may include leaks, fires, or chemical reactions.
- **Intermodal Transport Incidents:** When goods are transferred between different modes of transportation (e.g., ship to truck), there is the potential for mishandling or spills during these transfers.

Counties with multiple chemical facilities experience a greater risk of a chemical incident than other locations. However, almost every community in Kansas Region G has at least one fixed facility that stores, produces, or utilizes hazardous material. Hazardous materials shipments move through Kansas Region G annually. These shipments can occur at any time, day or night, and by means of road, rail, or air, and often through areas with urbanized, high volume traffic routes.

#### **4.19.3 Previous Occurrences**

The United States Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) is a federal agency responsible for regulating the safe and secure transportation of hazardous materials by all modes of transportation, including pipelines, trucks, trains, and aircraft. PHMSA's primary mission is to protect people and the environment from the risks associated with the transportation of hazardous materials. PHMSA plays a crucial role in safeguarding public safety, protecting the environment, and ensuring the integrity of the nation's hazmat transportation infrastructure. Its work encompasses a wide range of hazardous materials, including chemicals, radioactive materials, explosives, and more. The agency collaborates with industry stakeholders, state and local governments, and other federal agencies to achieve its safety and security objectives.

For the five-year period from 2018 to 2023, PHMSA has reported over 2,300 hazardous materials incidents in Kansas. Of these incidents, five of note occurred in Kansas Region G. One incident resulted in a serious evacuation and four resulted in a major artery closure. No fatalities or injuries were reported, and no radiological incidents were reported.

#### **4.19.4 Probability of Future Events**

Data from PHMSA indicates that the probability of a hazardous material incident during any given year is 100%. However, data indicates that the large majority of these incidents will be small in scale and cause no evacuation, injuries, or deaths,

#### **4.19.5 Projected Changes in Location, Intensity, Frequency, and Duration**

Projecting specific changes in the location, intensity, and frequency of hazardous materials events involves numerous variables, including future industrial activities, changes in transportation systems, and more stringent regulatory measures. The location of hazardous materials events is often influenced by urbanization and industrialization. The vulnerability of communities to hazardous materials incidents may change based on demographic shifts, land-use changes, and socioeconomic factors. Population density and proximity to industrial sites influence the potential impact of such incidents.

The continued transportation of hazardous materials by road, rail, and air poses inherent risks. Changes in transportation patterns, such as increased volumes or altered routes, can impact the potential for accidents and spills. However, the adoption of new technological solutions, such as sensor technologies, remote monitoring, and safety measures, can contribute to the mitigation of hazardous materials risks.

Changes in climate patterns, such as extreme weather events, floods, or wildfires, can influence the frequency and intensity of hazardous materials incidents. Events like hurricanes, floods, or wildfires may impact facilities handling hazardous materials.

As previously noted, Kansas Region G facilities have seen no major changes in the past five years, with only modest repairs and upgrades being conducted and no major rehabilitation or construction projects completed. As such, the risk to jurisdictional facilities has remained static since the completion of the 2019 HMP.

#### **4.19.6 Vulnerability and Impact**

Kansas Region G's first line of defense in protecting public health, safety, and welfare in a hazardous materials event are trained local responders and the Office of the State Fire Marshal. The Office of the State Fire Marshal Hazardous Materials Division was developed in 1999 to enhance the safety of Kansans by making trained, equipped hazardous materials teams available throughout the state. These teams support local first responders in hazardous materials incidents, accidents, weapons of mass destruction and acts of terrorism.

Hazardous materials teams exist through contracts between individual local fire departments and the Office of the State Fire Marshal. The fire departments agree to provide team members and regional response outside their local jurisdiction and the Office of the State Fire Marshal provides training and supplements equipment at no cost to the department. The ten regional response teams, consisting of nationally accredited hazardous materials technicians, are fully equipped to enter the area immediately surrounding the hazardous material in order to monitor the environment and mitigate the incident. The regional response teams comprise a network and are able to support each other with personnel and or equipment when needed.

These teams can respond to most areas in Kansas within an hour or less in order to address hazardous materials incidents. The regional response teams are located in the following areas:

- Coffeyville
- Colby
- Emporia
- Ford County
- Manhattan
- Overland Park
- Salina
- Sedgwick County
- Topeka

A hazardous materials release can have serious and immediate impacts on human health and safety, as well as long-term effects depending on the nature of the hazardous materials involved, the release's magnitude, and the proximity of individuals to the incident. Acute health effects from a hazardous materials release can include:

- **Chemical Exposure:** Depending on the type of hazardous material, exposure can lead to symptoms such as respiratory distress, skin burns, eye irritation, nausea, vomiting, and headaches.
  - **Toxicity:** Exposure to highly toxic substances can cause severe poisoning, organ damage, and even death.
  - **Asphyxiation:** Some hazardous materials, like certain gases, can displace oxygen and lead to asphyxiation when inhaled in high concentrations.
- Injuries and Trauma:**
- **Physical Injuries:** Explosive releases or fires involving hazardous materials can cause physical injuries such as burns, cuts, and blunt force trauma.
  - **Psychological Trauma:** Witnessing or being affected by a hazardous materials incident can lead to psychological trauma, including post-traumatic stress disorder (PTSD) and anxiety.

Long-Term Health Effects from a hazardous materials release can include:

- **Chronic Illnesses:** Exposure to hazardous materials may lead to chronic health conditions, including cancer, respiratory diseases, neurological disorders, and reproductive problems.
- **Delayed Effects:** Some hazardous substances have delayed health effects, with symptoms appearing days, months, or even years after exposure.

Additionally, a hazardous material release can result in impacted populations requiring:

- **Evacuation:** To protect public safety, authorities may order evacuations of affected areas, displacing residents from their homes.
- **Temporary Shelter:** Evacuated individuals may require temporary shelter, food, and medical care.

The direct risk or vulnerability to property and facilities from a hazardous materials incident is generally limited. Impacts include restricting access to a facility or potential damage to the facility from corrosive agents. Direct risk and vulnerability to actual structures is limited due to the characteristics of a hazardous materials incident.

Critical facilities and infrastructure may suffer secondary impacts from a hazardous materials incident. Access may be restricted due to closures, causing employee absenteeism which could indirectly impact the ability for a critical facility to operate. Without necessary operators, critical infrastructure may be susceptible to indirect failure.

A hazardous materials release can have significant and lasting impacts on the environment, depending on the type and quantity of hazardous materials involved, the location of the release, and the effectiveness of response and cleanup efforts. Environmental impacts can range from immediate and localized effects to long-term ecological damage and may include:

- **Soil Contamination:** Hazardous materials can seep into the soil, contaminating it with toxic substances. This can affect soil quality and fertility.
- **Agricultural Damage:** Contaminated soil may harm crops, leading to reduced agricultural yields or the need to abandon affected fields.
- **Surface Water Contamination:** Hazardous materials can enter rivers, lakes, and streams, leading to water pollution. This can harm aquatic ecosystems, fish, and wildlife.
- **Groundwater Contamination:** Contaminants can infiltrate underground aquifers, potentially affecting drinking water supplies and requiring costly remediation efforts.

- **Habitat Destruction:** Contamination can harm natural habitats, disrupt ecosystems, and threaten the survival of plant and animal species.
- **Bioaccumulation:** Toxic substances can accumulate in the food chain, leading to health issues for wildlife and potentially impacting humans who consume contaminated organisms.

Some hazardous materials are persistent and can remain in the environment for extended periods, causing ongoing harm. Environmental recovery from hazardous materials releases can be slow and challenging, requiring extensive remediation efforts.

A hazardous materials incident can have wide-ranging impacts on local operations. These impacts can disrupt government operations, strain resources, and pose challenges to maintaining public order. Some of the impacts of a hazardous materials release on operations may include:

- **Emergency Response and Healthcare:** Local agencies must rapidly mobilize emergency response teams, medical personnel, and healthcare facilities to address a release. The surge in demand for medical resources can strain healthcare systems, including hospitals, clinics, and emergency services.
- **Resource Allocation:** Local agencies may need to allocate resources to respond to the incident. This includes personnel, equipment, and facilities.
- **Transportation and Supply Chain Disruption:** Transportation infrastructure closures can affect the movement of essential goods and services, including medical supplies, food, and fuel.
- **Economic Impact:** The economic consequences of a hazardous materials incident can be severe. Business closures, reduced consumer confidence, and trade disruptions can lead to financial losses, unemployment, and economic instability.
- **Public Services:** Essential public services, such as law enforcement, fire services, and sanitation, may be stretched thin due to the demands of responding to an incident.
- **Agency Coordination:** Coordination and communication among various state agencies and with federal authorities will be tested during a hazardous materials incident. Local emergency management agencies will activate emergency response plans and incident command structures.

### Consequence Analysis

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Hazardous Materials Incident Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	Cities within Kansas Region G with dense populations, particularly along major travel routes, are the most vulnerable (with an emphasis on any particularly vulnerable groups, such as infants and young children in day-care centers, children in schools, the elderly in residential facilities, hospital patients, etc.). Varying materials will have different effects on the population as well as environmental effects which will dilute or increase potency. Protective measures will need to be taken particularly for those of the most vulnerable communities.
Impact on Responders	Hazardous material incidents can create a dangerous environment and significant challenge for first responders. First responders may have to manage the evacuation of people from the area impacted by an incident, as well as direct traffic, close roads, operate shelters, and take care of the injured and sick. First responders must control their own exposure to the incident and ensure the correct PPE is utilized. Equipment

**Table x: Hazardous Materials Incident Consequence Analysis**

<b>Subject</b>	<b>Potential Impacts</b>
	may also be damaged or destroyed due to the impact of the incident, which may lead to a decrease in response capabilities.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. A hazardous materials incident may impact an agency's ability to maintain continuity of operations based on the incidents potential to cause workforce absenteeism, contamination, or destruction of public facilities.
Delivery of Services	The ability to deliver services can be impacted locally, regionally, or statewide depending on the characteristics of the incident. To reduce the public's potential exposure to dangerous materials, roadway and bridge closures may be required, as well as transit service disruptions. Businesses and places of commerce may completely shut down due to chemical incidents, which leads to the disruption of goods and services.
Property, Facilities, and Infrastructure	Transportation, governmental operations, and infrastructure facilities may be disrupted during a significant incident. Roads and bridges can be completely obstructed and require cleanup. Incidents can impact access to homes and critical entities such as hospitals, schools, and supermarkets, as well as other critical facilities. Safe access to homes, vehicles, structures, and resources may adversely affect response activities. Power loss can lead to disruption of critical infrastructure and technology.
Impact on Environment	Agriculture crops and livestock are extremely susceptible to the adverse effects of biological incidents that may cause contamination of a large area of land livestock. biological incidents may impact the environment long-term by disturbing or killing wildlife and adversely affecting nature preserves.
Economic Conditions	Hazardous materials incidents pose a fiscal impact on the local and state governments. Local, county, and state resources may be required during a large incident therefore reducing their availability for future events. Additionally, private businesses may not be able to maintain operations during or after an incident if they are impacted, which would impact the economy.
Public Confidence in Governance	The public's confidence in the state's governance is affected by immediate local and state response through direct and effective actions. Efficiency in response and recovery operations is critical in keeping public confidence high.

#### 4.19.7 Hazard Planning Significance

Utilizing the above detailed formula for calculating the hazard planning significance for human caused and technological hazards, the following table details the rating of each criterion along with a composite rating:

**Table: Hazardous Materials Incident Planning Significance**

<b>County</b>	<b>Probability</b>	<b>Magnitude</b>	<b>Warning Time</b>	<b>Duration</b>	<b>Score</b>	<b>Planning Significance</b>
Butler	4	1	3	1	2.7	Moderate
Cowley	4	1	3	1	2.7	Moderate
Harper	4	1	3	1	2.7	Moderate
Harvey	4	1	3	1	2.7	Moderate
Kingman	4	1	3	1	2.7	Moderate
Marion	4	1	3	1	2.7	High
McPherson	4	2	3	1	3.0	Moderate
Reno	4	2	3	1	3.0	High
Rice	4	1	3	1	2.7	Moderate
Sedgwick	4	2	3	1	3.0	High
Sumner	4	1	3	1	2.7	Moderate

## 4.20 Infrastructure Failure

### 4.20.1 Hazard Description

Infrastructure failure refers to the malfunction, breakdown, or collapse of critical infrastructure systems or components that are essential for the functioning of the State. These failures can disrupt essential services, impact public safety, and lead to economic losses. There are many potential causes of infrastructure failure, including:

- **Aging Infrastructure:** Many infrastructure systems, such as bridges, roads, and water pipelines, have exceeded their designed lifespan. Over time, the materials degrade, and the risk of failure increases.
- **Earthquakes:** Seismic events can damage or destroy buildings, bridges, dams, and utility systems.
- **Floods:** Flooding can damage electrical systems, disrupt transportation, and contaminate water supplies.
- **Severe Weather:** High winds and heavy rainfall can damage infrastructure.
- **Extreme Heat:** Prolonged periods of extreme heat can cause roads to buckle, power lines to sag, and strain electrical grids.
- **Freezing Temperatures:** Cold weather can lead to frozen water pipes, which can burst and disrupt water supply.
- **Design Flaws and Poor Maintenance:** Inadequate design, construction, or maintenance practices can result in structural weaknesses or deteriorating infrastructure.
- **Corrosion and Erosion:** Infrastructure components, particularly those involving metals, can deteriorate due to corrosion over time. Erosion of natural landscapes can damage infrastructure.
- **Material Failures:** Inadequate materials or the use of substandard materials during construction can lead to premature infrastructure failure.
- **Overloading and Overuse:** Bridges, roads, and other structures can fail if they are subjected to loads beyond their designed capacity. Water and wastewater systems can fail if they are overwhelmed by excessive demand.
- **Cyberattacks:** Critical infrastructure systems, such as power grids, water treatment plants, and transportation systems, can be vulnerable to cyberattacks, which can disrupt operations and compromise safety.
- **Terrorism and Sabotage:** Deliberate acts of terrorism or sabotage can target critical infrastructure, leading to failures and disruptions.
- **Environmental Changes:** Long-term environmental changes due to climate change, can threaten infrastructure.

Infrastructure failures can have significant consequences, including economic losses, public safety risks, and disruptions to daily life. Preventing such failures and ensuring the resilience of critical infrastructure often require proactive measures such as regular maintenance, improvements in design and construction practices, disaster preparedness, and investments in modernization and upgrades.

### 4.20.2 – Location and Extent

Details concerning Kansas Region G’s infrastructure were sourced from the 2020 Report Card for Kansas’s Infrastructure from the American Society of Civil Engineers (ASCE). The report provides information on infrastructure components and provides a letter grade to indicate condition. Grades are issued based on the following scale:

**Table 60: ASCE Infrastructure Grade System**

Grade	Description
A: Exceptional	The infrastructure in the system or network is generally in excellent condition, typically new or recently rehabilitated, and meets capacity needs for the future. A few elements show signs of general deterioration that require attention. Facilities meet modern standards for functionality and are resilient to withstand most disasters and severe weather events.

**Table 60: ASCE Infrastructure Grade System**

Grade	Description
B: Adequate for Now	The infrastructure in the system or network is in good to excellent condition; some elements show signs of general deterioration that require attention. A few elements exhibit significant deficiencies. Safe and reliable with minimal capacity issues and minimal risk.
C: Mediocre, Requires Attention	The infrastructure in the system or network is in fair to good condition; it shows general signs of deterioration and requires attention. Some elements exhibit significant deficiencies in conditions and functionality, with increasing vulnerability to risk.
D: Poor, At Risk	The infrastructure is in poor to fair condition and mostly below standard, with many elements approaching the end of their service life. A large portion of the system exhibits significant deterioration. Condition and capacity are of significant concern with strong risk of failure.
F: Failing/Critical, Unfit for Purpose	The infrastructure in the system is in unacceptable condition with widespread advanced signs of deterioration. Many of the components of the system exhibit signs of imminent failure.

Source: ASCE

The following table indicates the grades by the State of Kansas received for infrastructure components:

**Table X: ASCE Kansas Infrastructure Grades**

Infrastructure Component	Grade
Aviation	C-
Bridges	C
Dams	C-
Drinking Water	C
Energy	C
Levees	C
Rail	C
Roads	C-
Stormwater	C-
<b>Overall Grade</b>	<b>C</b>

Source: ASCE

The Aviation Division of the Kansas Department of Transportation supports airfield pavement management programs and calculates pavement condition for all airports within its system apart from Dwight D. Eisenhower National airport in Wichita, which is required to perform the program as a small hub airport. The most recent state-wide pavement management report indicated pavement on 79 of 80 airports examined as having a condition of fair or less than fair on 51% of the pavement area, and a condition of satisfactory or good on the remaining 49% of the pavement. Runway pavement condition, of critical importance to operations, is reported as 50% of the runways available fall below a fair condition.

Kansas ranks fifth in the nation for total number of bridges with approximately 5,000 state-owned, 19,500 locally-owned, and 400 Kansas Turnpike Authority owned structures, making up the 25,001 Kansas bridge inventory. The majority of local bridges are owned by counties. The average age of a Kansas bridge is 48 years, with over 20% of the bridges exceeding the modern 75-year design life

Railroads in Kansas consist of 4,700 miles of track which transport approximately 340,000,000 tons of freight per year. While the 2,800 miles of track owned by the major rail companies is typically well maintained, short line tracks that carry lower traffic volumes may not have adequate funding in place for necessary maintenance and upgrades.

Kansas has over 140,000 miles of public roadways. The two agencies responsible for the major highways and interstates are the Kansas Department of Transportation and the Kansas Turnpike Authority, who maintain 10,300 miles (7.4%) and 236 miles (less than 0.2%) of the state's total public road miles. The remainder of road network is maintained by cities and counties.

In general, electricity in Kansas Region G is provided by either investor-owned utilities or rural electric cooperatives (RECs). RECs are not-for-profit, member-owned electric utilities. Kansas RECs are governed by a board of trustees elected from the membership. Most Kansas RECs were set up under the Kansas Electric Cooperative Act, which, together with the federal Rural Electrification Act of 1934, made electric power available to rural customers. Information on regional electrical suppliers may be found at [www.kec.org/servicearea\\_map.html](http://www.kec.org/servicearea_map.html). Additionally, locations of electric certified areas and transmission lines may be found at [www.kcc.state.ks.us/maps/ks\\_electric\\_certified\\_areas.pdf](http://www.kcc.state.ks.us/maps/ks_electric_certified_areas.pdf).

#### **4.20.3 Previous Occurrences**

Small scale infrastructure failures occur as a secondary impact from a natural disaster, such as a temporary power outage due to a thunderstorm or a communications outage from downed lines following a severe storm. Kansas Region G experiences these minor disruptions routinely and manages them through coordination across agencies and with the private sector. Specifically, when utility and/or infrastructure failure does occur, utility providers generally respond quickly to restore service. However, depending on the cause of the utility disruption, events of prolonged outages do occur.

#### **4.20.4 Probability of Future Events**

The probability of a utility failure can vary depending on a range of factors, including the type of utility, the condition of the infrastructure, weather conditions, and maintenance practices. Utility providers typically have systems and protocols in place to minimize the risk of utility failures, and they work to respond quickly to any outages or disruptions. The probability of a utility failure may also vary seasonally or during extreme weather events.

#### **4.20.5 Projected Changes in Location, Intensity, Frequency, and Duration**

Climate change can influence the frequency, intensity, and patterns of extreme weather events. An increase in these events can cause a commensurate increase in infrastructure failures. It is expected that climate change will impact infrastructure in the following ways:

- **Increased Frequency of Extreme Weather Events:** Climate change is associated with an increased frequency and intensity of extreme weather events, such as hurricanes, heatwaves, heavy rainfall, and wildfires. These events can damage utility infrastructure, leading to outages.
- **Heatwaves and Electrical Grids:** Rising temperatures can lead to more frequent and prolonged heatwaves. High temperatures can strain electrical grids, leading to increased demand for electricity for cooling and potentially causing power outages.
- **Increased Storm Intensity and Utility Damage:** Hurricanes and tropical storms may become more intense due to warming oceans. Stronger storms can damage power lines, transformers, and other electrical infrastructure, resulting in widespread electricity outages.
- **Sea-Level Rise and Coastal Infrastructure:** Sea-level rise, a consequence of climate change, can threaten coastal infrastructure, including power plants, wastewater treatment facilities, and transportation systems. It can lead to saltwater intrusion, erosion, and damage to critical infrastructure.
- **Flooding and Water Utilities:** More frequent and severe flooding events can impact water supply and wastewater treatment facilities, causing contamination and disruptions in water services.
- **Wildfires and Power Lines:** Climate change can contribute to more extensive and intense wildfires. In regions prone to wildfires, power lines and electrical equipment are at risk of igniting fires, leading to power outages and infrastructure damage.

- **Extreme Weather and Gas Pipelines:** Extreme weather events, including extreme cold or heat, can impact natural gas pipelines. Cold temperatures can freeze pipelines, while heatwaves can affect gas compressors and transmission systems.
- **Changing Precipitation Patterns:** Altered precipitation patterns, such as more intense rainfall or prolonged droughts, can affect the availability and quality of water resources, impacting water utilities and hydropower generation.
- **Increased Storm Surge and Coastal Erosion:** Rising sea levels can exacerbate storm surges during hurricanes and coastal storms, leading to flooding and damage to utility infrastructure located along coastlines.

As previously noted, State of Rhode Island facilities have seen no major changes in the past five years, with only modest repairs and upgrades being conducted and no major rehabilitation or construction projects completed. As such, the risk to state facilities has remained static since the completion of the 2019 SHMP.

#### **4.20.6 Vulnerability and Impact**

Infrastructure failure can have significant and immediate impacts on people. The specific impacts can vary depending on the type of utility that fails (electricity, water, gas) and the duration of the outage, and may include:

- **Disruption of Daily Life:** Utility failures can disrupt daily routines, including cooking, bathing, heating or cooling homes, and using electronic devices. Lack of electricity can also disrupt businesses, schools, and healthcare facilities.
- **Safety Concerns:** Utility failures, particularly in electrical and gas systems, can pose safety risks such as fires, electrical hazards, and gas leaks. Lack of electricity can result in the loss of lighting, increasing the risk of accidents and falls.
- **Health Implications:** Medical equipment that relies on electricity can become non-functional, posing risks to individuals with medical conditions. Lack of access to clean water can impact hygiene and health. Utility failures in healthcare facilities can impact the ability to provide medical care and support for patients. Prolonged utility failures, especially during extreme weather events, can lead to stress, anxiety, and discomfort. Vulnerable populations, such as the elderly, children, and those with special needs, may be particularly affected.

Utility failures can have significant impacts on critical infrastructure and facilities. The specific impacts can vary depending on the type of utility affected, the duration of the outage, and the criticality of the infrastructure, and may include:

- **Disruption of Operations:** Utility failures can disrupt the normal operations of critical facilities, including hospitals, emergency response centers, data centers, and transportation hubs.
- **Compromised Safety and Security:** Loss of electricity can impact security systems, including surveillance cameras and alarm systems. Critical facilities may rely on backup power sources to maintain safety and security.
- **Loss of Communication:** Utility failures can disrupt communication systems, affecting the ability of critical facilities to coordinate responses and communicate with staff and the public.
- **Healthcare Impacts:** Hospitals and healthcare facilities may experience disruptions in patient care due to power outages, affecting the health and safety of patients. Medical equipment may require backup power to continue functioning.
- **Water and Sanitation Services:** Water utility failures can disrupt water supply to critical facilities, impacting sanitation services, firefighting capabilities, and patient care. Wastewater treatment plants may be affected, posing environmental and health risks.
- **Transportation Disruptions:** Transportation infrastructure, including airports, train stations, and traffic management systems, may be impacted by utility failures, leading to travel disruptions.

- **Safety Hazards:** Gas utility failures can result in gas leaks, posing fire and explosion hazards to critical infrastructure and nearby areas. Electrical failures may lead to equipment malfunctions, increasing the risk of accidents and safety incidents.

In general, a utility failure would have little effect on the environment. However, specific circumstances of the failure, such as a chemical leak, a downed power line in a fire prone area, or loss of wastewater containment could pose a concern. The impacts from those type of events can range from relatively minor and localized effects to more significant and widespread environmental consequences, and may include:

- **Wildfires:** Electrical utility failures, such as downed power lines or equipment malfunctions, can trigger wildfires. Wildfires can have devastating effects on natural landscapes and ecosystems.
- **Water Pollution:** Water utility failures, such as sewage system overflows or treatment plant malfunctions, can lead to the release of untreated wastewater into rivers, lakes, or oceans. This can result in water pollution, harm aquatic ecosystems, and affect drinking water quality downstream.
- **Chemical Spills:** Utility failures, particularly in industrial settings, can result in chemical spills and releases. These spills can harm the environment, contaminate soil and water, and endanger wildlife.

Infrastructure failure can have significant impacts on governmental operations, affecting the ability to provide essential services, respond to emergencies, and maintain critical infrastructure. The specific impacts can vary depending on the type of utility affected and the duration of the outage, and may include:

- **Disruption of Emergency Services:** Failures can disrupt the operations of emergency response agencies, including police, fire departments, and medical services. This can impede their ability to respond to accidents, fires, and medical emergencies.
- **Communication Challenges:** Failures, particularly in telecommunications and internet infrastructure, can hinder communication between government agencies, first responders, and the public. This can impact coordination during emergencies.
- **Data Loss and Information Technology Disruptions:** Electrical outages and information technology infrastructure failures can result in data loss and disrupt government operations that rely on digital records and systems.
- **Transportation Disruptions:** Transportation infrastructure, such as traffic management systems and public transit, may be impacted by utility failures, leading to travel disruptions and challenges in managing traffic flow.
- **Public Health Services:** Healthcare facilities and public health agencies may experience disruptions in patient care, vaccination programs, and disease surveillance during utility failures.
- **Safety Risks:** Failures can pose safety risks to government employees and the public, particularly when they result in electrical hazards, gas leaks, or water contamination.
- **Economic Consequences:** The economic impact of infrastructure failures can extend to governmental operations, affecting budgets and resources available for public programs and services.
- **Disaster Response and Recovery:** Failures may occur during natural disasters, adding complexity to state response and recovery efforts. Coordination among agencies becomes crucial.

Although the limitless variables make it difficult to estimate future losses, FEMA has developed standard loss of use estimates in conjunction with their Benefit-Cost Analysis methodologies to estimate the cost of lost utilities on a per-person, per-use basis.

**Table X: FEMA Benefit-Cost Analysis**

<b>Loss of Electric Power</b>	<b>Cost of Complete Loss of Service</b>
Total Economic Impact	\$131 per person per day

Loss of Potable Water Service	Cost of Complete Loss of Service
Total Economic Impact	\$103 per person per day
Loss of Wastewater Service	Cost of Complete Loss of Service
Total Economic Impact	\$45 per person per day
Loss of Road/Bridge Service	Cost of Complete Loss of Service
Vehicle Delay Detour Time	\$29.63 per vehicle per hour (one-way trips)
Vehicle Delay Mileage	\$0.54 per mile (or current federal mileage rate)

Source: FEMA BCA Reference Guide, June 2009, Appendix C

### Consequence Analysis

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Infrastructure Failure Consequence Analysis**

Subject	Potential Impacts
Impact on the Public	Critical infrastructure failures can lead to heavy flooding, power loss, property damage, injury, and even death. Roadways may be obstructed or inaccessible to the public, challenging transport and resource acquirement activities. A failure of critical infrastructure would have a direct impact on public health. Power outages, transit failures, access to clean water would create severe and immediate public health impacts.
Impact on Responders	Infrastructure failure would have a direct and immediate impact on first responder's ability to respond effectively. Critical infrastructure failure may cause inaccessibility of roadways. Communications system failure would impact the responders' ability to communicate their status or response capability.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. An infrastructure failure may impact an agency's ability to maintain operations based on the incidents impact, including access to facility by transportation systems, and the availability of utilities, communications, energy, and water and wastewater systems.
Delivery of Services	Delivery of services will be disrupted due to critical infrastructure failure. Transit systems may face closures due to public safety concerns. The ability to deliver food, drinking-water, and services will be impacted due to problems with accessibility and transport abilities. Communications, transportation, and governmental services operations would be impacted due to power failure and accessibility challenges.
Property, Facilities, and Infrastructure	Roads and bridges may be impacted, water and sewer systems may be damaged, leading to the issue of sanitation and waste collection. Property of homes and businesses may be completely destroyed if situated close to the failure point.
Impact on Environment	The impacts on the environment of critical infrastructure would vary based on the event. Failure of waste water plants would result in spreading pollution and hazardous materials throughout the environment including large bodies of water. Ecosystems and natural habitats may be destroyed, causing migration or death of wildlife.
Economic Conditions	Critical infrastructure failure would have a direct and considerable fiscal impact on the local government, however through federal disaster may be offset. Additionally, infrastructure failure in every sector has the potential to impact the ability of businesses to operate. If the private sector was not able to maintain operability, there would be continued revenue loss until operability was restored.
Public Confidence in Governance	Critical infrastructure failure would have a direct and immediate impact on the state's ability to provide governance, maintain order, and ensure the continuity of public

**Table x: Infrastructure Failure Consequence Analysis**

Subject	Potential Impacts
	services. Given a prolonged failure, the public would become increasingly distrustful of the government's abilities. Direct, immediate, and effective actions must be taken in order to maintain public confidence.

**4.20.7 Hazard Planning Significance**

Utilizing the above detailed formula for calculating the hazard planning significance for human caused and technological hazards, the following table details the rating of each criterion along with a composite rating:

**Table: Infrastructure Failure Planning Significance**

County	Probability	Magnitude	Warning Time	Duration	Score	Planning Significance
Butler	3	3	3	2	2.5	Moderate
Cowley	3	3	3	2	2.5	Moderate
Harper	3	3	3	2	2.5	Moderate
Harvey	3	3	3	2	2.5	Moderate
Kingman	3	3	3	2	2.5	Moderate
Marion	3	3	3	2	2.5	Moderate
McPherson	3	3	3	2	2.5	Moderate
Reno	3	3	3	2	2.5	Moderate
Rice	3	3	3	2	2.5	Moderate
Sedgwick	3	3	3	2	2.5	Moderate
Sumner	3	3	3	2	2.5	Moderate

## 4.21 Terrorism

### 4.21.1 Hazard Description

The United States does not have a standardized definition of terrorism that is agreed upon by all agencies. The Federal Bureau of Investigation generally defines terrorism as:

"the unlawful use of force and violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives."

Terrorism is characterized by the use of violence, intimidation, or the threat of violence to instill fear, achieve political, religious, ideological, or social objectives, and disrupt the normal functioning of a society. It often involves acts of violence deliberately targeting civilians. Key elements and characteristics of terrorism include:

- **Political or Ideological Motivation:** Terrorism is often driven by political, religious, ideological, or social goals. Perpetrators seek to advance a particular agenda or bring about change in accordance with their beliefs.
- **Use of Violence:** Terrorism involves the use of violence, which can range from bombings, shootings, and kidnappings to cyberattacks and biological threats. The intent is to cause harm and instill fear.
- **Targeting Civilians:** Terrorist acts typically target civilians or non-combatants, rather than military or government personnel. This is done to maximize the psychological impact and create a sense of vulnerability within society.
- **Psychological Impact:** The primary objective of terrorism is to create fear and anxiety within the population. The fear generated by terrorist acts can have profound psychological and societal effects.
- **Non-State Actors:** Terrorism is often associated with non-state actors, such as terrorist organizations, extremist groups, or individuals acting independently. However, some state entities have also been accused of engaging in acts that meet the criteria of terrorism.
- **Symbolism:** Terrorist acts are often symbolic in nature, targeting specific locations, landmarks, or institutions that hold significance to the perpetrators or their cause.

Terrorism in the United States can take various forms, and the nature of terrorist threats has evolved over time. Common forms of terrorism in the United States include:

- **Domestic Terrorism:** Domestic terrorism involves acts of violence or intimidation committed by individuals or groups within the United States. These acts are typically driven by extremist ideologies, such as far-right extremism, far-left extremism, or other radical beliefs. Recent examples of domestic terrorism include attacks on religious institutions, acts of violence against minority communities, and violent protests.
- **Far-Right Extremism:** Far-right extremism refers to ideologies and movements characterized by extreme nationalism, racism, and opposition to government authority. Some far-right extremists have engaged in acts of violence targeting minority communities, government officials, or perceived enemies.
- **Far-Left Extremism:** Far-left extremism encompasses a range of radical ideologies, including anarchist and socialist beliefs. While not as prevalent as far-right extremism, far-left extremists have been involved in protests, clashes with law enforcement, and acts of violence.
- **Religiously-Motivated Terrorism:** Religious extremism can lead to acts of terrorism. In the United States, this has included attacks by individuals or groups inspired by extremist interpretations of Islam, Christianity, or other religions.
- Examples include the 1993 World Trade Center bombing and the 2009 Fort Hood shooting.

- **Single-Actor Terrorism:** Lone-wolf terrorism involves individuals who carry out acts of violence without direct affiliation with established terrorist organizations. These individuals are often self-radicalized and may be inspired by online propaganda. Examples include the 1995 Oklahoma City bombing and the 2013 Boston Marathon bombing.
- **Eco-Terrorism:** Eco-terrorism refers to acts of violence or sabotage carried out in the name of environmental activism. These acts target industries or organizations perceived as harmful to the environment.
- Examples include arson attacks on logging facilities or animal testing labs.
- **Cyberterrorism:** Cyberterrorism involves using computer technology to disrupt or damage critical infrastructure, institutions, or networks. While not as common as other forms of terrorism, cyberattacks pose significant risks. Cyberattacks by state-sponsored actors or independent hackers can target government agencies, corporations, and infrastructure.

The U.S. government, law enforcement agencies, and intelligence services actively monitor and address various forms of terrorism. Counterterrorism efforts include preventive measures, intelligence gathering, community engagement, and law enforcement actions. Public awareness, community outreach, and reporting suspicious activities also play a role in countering terrorism in the United States.

Whether mass shooting events (especially school shootings) are considered acts of terrorism can be a subject of debate and can vary depending on the specific circumstances and legal definitions in different jurisdictions. There is no standardized definition of a mass shooting. The United States Investigative Assistance for Violent Crimes Act defines a mass killing as three or more killings in a single incident while the Federal Bureau of Investigation defines a mass shooting as any incident in which at least four people were shot and killed. Mass shootings involve acts of violence carried out in public places, often by individuals who may have personal grievances, mental health issues, or other motivations not necessarily connected to a political or ideological agenda. While mass shootings are undoubtedly acts of violence that result in tragedy and loss of life, they may not always fit the traditional definition of terrorism, as the primary motivation is often not to advance a political or ideological cause. If the shooter's primary aim is to instill fear, advance a political agenda, or promote a particular ideology, it may be more likely to be classified as terrorism. However, if the shooter's motivation is primarily personal, such as a desire for revenge or mental health issues, the act may not be considered terrorism under many legal definitions.

#### **4.21.2 – Location and Extent**

All of Kansas Region G is vulnerable to terrorism, particularly in densely populated urban areas or crowded venues. However, it is nearly impossible to pinpoint the exact location of the next terrorist attack. Through information and intelligence sharing, public safety personnel at the local, state, and federal level help identify potential targets for terrorist activity. Although it is impossible to predict for certain where the next terrorist attack will take place, terrorists generally target large, crowded places, such as malls, parks, and other large public or social gatherings, in order to maximize damage. In addition, some acts of terror are conducted against critical infrastructure in an effort to weaken or cripple services such as transportation, communications, and electricity.

The extent of terrorism can vary significantly depending on a range of factors including the tactics, capabilities, and the effectiveness of counterterrorism efforts. Tactics employed may include bombings, firearm attacks, kidnappings, assassinations, cyberattacks, or a combination. The choice of targets, such as civilians, government institutions, religious sites, or critical infrastructure can also affect the extent of the terrorist threat. The extent of terrorism may also be influenced by public support or sympathy for extremist ideologies, as well as the recruitment and radicalization of individuals into terrorist organizations. Socio-economic factors, such as poverty, unemployment, and inequality, can contribute to the conditions conducive to terrorism.

The effectiveness of counterterrorism efforts by governments and international organizations can influence the extent of terrorism. Robust counterterrorism measures can disrupt terrorist networks and reduce the frequency and impact of attacks. Efforts to address terrorism typically involve a combination of security measures, intelligence sharing, diplomacy, counter-radicalization programs, and community engagement. Reducing the extent of terrorism often

requires a multifaceted approach that addresses both the root causes and the immediate security threats associated with terrorism.

#### **4.21.3 Previous Occurrences**

Although there has not been a terrorist attack in Kansas Region G, this does not reduce the significance of the threat. There have been numerous examples of terrorism that have occurred in the United States, and specifically terrorist events that have occurred in the region. Of note:

- Alfred P. Murrah Federal Building, Oklahoma City (1995), 168 killed.

#### **4.21.4 Probability of Future Events**

Assessing the probability of a terrorist attack in Kansas Region G involves complex analysis conducted by intelligence and law enforcement agencies such as the U.S. Department of Homeland Security, the Federal Bureau of Investigation, and the Kansas State Police. These agencies regularly provide threat assessments and security information to the public based on local, international, and geopolitical intelligence.

#### **4.21.5 Projected Changes in Location, Intensity, Frequency, and Duration**

Predicting the specific changes in the location, intensity, and frequency of terrorist events is highly challenging due to the complex and dynamic nature of terrorism. Terrorism is influenced by a multitude of factors, including political, social, economic, and ideological considerations. Additionally, responses by governments, international cooperation, and evolving global dynamics contribute to the uncertainty surrounding future projections.

The increasing reliance on technology provides terrorists with new tools and methods for conducting attacks. Cyberterrorism can be used to disrupt critical infrastructure or compromise information systems may become more prevalent. Additionally, the use of online platforms for radicalization and recruitment purposes is a growing concern. Changes in the online landscape, social media platforms, and encryption methods can influence the reach and effectiveness of extremist propaganda.

Climate change can indirectly influence terrorism by exacerbating certain conditions that may contribute to the emergence and persistence of terrorist threats. While climate change itself does not directly cause terrorism, it can interact with other factors to create a more conducive environment for terrorist activities. Climate change can lead to resource scarcity, such as water and arable land shortages, which may intensify poverty. This scarcity can create conditions that extremist groups exploit. Additionally, climate-induced displacement and migration can result from events like sea-level rise, extreme weather events, and droughts. Displaced populations can become vulnerable to recruitment by extremist groups, as they may lack basic necessities and economic opportunities.

As previously noted, Kansas Region G facilities have seen no major changes in the past five years, with only modest repairs and upgrades being conducted and no major rehabilitation or construction projects completed. As such, the risk to state facilities has remained static since the completion of the 2019 SHMP.

#### **4.21.6 Vulnerability and Impact**

Terrorism can have profound and far-reaching impacts on individuals and communities. These effects can be physical, psychological, social, and economic, and may include:

- **Loss of Life and Injury:** Terrorism often results in the loss of innocent lives and injuries to survivors. Victims may suffer physical trauma, disabilities, and long-term health issues.
- **Psychological Trauma:** Many survivors of terrorist attacks and witnesses may experience Post-Traumatic Stress Disorder, characterized by flashbacks, nightmares, anxiety, and emotional distress. Children and young people may be particularly vulnerable to the psychological effects of terrorism, which can impact their emotional and cognitive development.

- **Anxiety and Depression:** Terrorism can lead to increased anxiety and depression in affected individuals and communities.
- **Grief and Loss:** Those who lose loved ones in terrorist attacks may experience profound grief and loss, which can be long-lasting.

Terrorism can disrupt social structures and community cohesion, leading to feelings of insecurity and mistrust. Fear of future attacks may limit social activities and interactions, impacting the quality of life. Some terrorist attacks, such as bombings, can result in displacement and homelessness for those affected, leading to housing instability and further psychological stress. People may alter their daily routines, travel plans, or social activities due to fear of further attacks. This can impact personal freedom and quality of life.

Critical infrastructure is often high-value and high-impact, making it an attractive target for terrorists looking to cause disruption, economic damage, and fear. Many critical infrastructure sectors are interconnected, so an attack on one sector can have cascading effects on others. For example, an attack on the power grid can impact telecommunications and transportation. Compounding the issue, certain critical infrastructure facilities are accessible to the public or located in urban areas, making them vulnerable to physical attacks, such as bombings or shootings. Specific impacts on critical infrastructure may include:

- **Disruption of Operations:** Attacks can disrupt the normal operations of critical facilities, including hospitals, emergency response centers, data centers, and transportation hubs.
- **Economic Disruption:** Attacks can lead to significant economic disruption, including damage to facilities, loss of productivity, and increased operational costs.
- **Public Safety:** Attacks on certain critical infrastructure, such as transportation hubs or healthcare facilities, can pose immediate risks to public safety, leading to injuries and loss of life.
- **Disruption of Services:** Infrastructure attacks can result in service disruptions, including power outages, water supply interruptions, and communication breakdowns.
- **Healthcare Impact:** Attacks on healthcare infrastructure, like hospitals, can limit access to medical care during emergencies, potentially leading to higher casualties.

Terrorism can have significant impacts on governmental operations. These impacts can vary depending on the nature and scale of terrorist attacks, the level of preparedness and response, and the specific vulnerabilities, and may include:

- **Security and Law Enforcement:** An attack would lead to an increased demand on law enforcement agencies to prevent, investigate, and respond to terrorist threats and incidents. Allocation of significant resources to counterterrorism efforts would stretch resources.
- **Emergency Response:** Local emergency management agencies, in conjunction with state and federal agencies, would need to activate emergency response and management systems to coordinate response. A long-term activation could strain resources and personnel. Additionally, responders may be vulnerable to secondary devices or attacks.
- **Public Services:** An attack could lead to the disruption of public services, such as transportation, utilities, and public spaces, due to security concerns.
- **Economic Impact:** Negative economic consequences, including damage to businesses, loss of investor confidence, and reduced tourism and foreign investment can occur.
- **Surveillance and Privacy Concerns:** Expansion of surveillance capabilities may result in concerns about potential violations of privacy rights.
- **Impact on Government Operations:** An attack would likely cause the disruption of government functions, including closures of government offices and facilities.
- **Psychological Impact on Government Officials:** Psychological stress and burnout among government officials and first responders involved in counterterrorism efforts.

- **Public Opinion and Confidence:** Fluctuations in public opinion and confidence in the government's ability to provide security and protect citizens would occur.

For this assessment, it is not possible to calculate a specific vulnerability for each county or participating jurisdiction. However, because of the desire for publicity following attacks, it is more likely that counties and jurisdictions with greater population densities and /or larger event venues have a greater risk.

In general, it is difficult to quantify potential losses of terrorism due to the many variables and human elements. The following hypothetical scenario, using the Electronic Mass Casualty Assessment and Planning Scenarios developed by Johns Hopkins University, provides an estimated impact of a potential terrorism event.

#### Scenario: Improvised Explosive Device

**Event:** A van transported improvised explosive device utilizing an ammonium nitrate/fuel oil mixture is detonated in the parking area of a stadium as people are entering. Potential losses with this type of scenario include both human and structural assets.

**Event Assumptions:** The quantity of ammonium nitrate/fuel oil mixture used is 4,000 pounds. The population density of the lot is assumed to be one person per every 25 square feet for a pre-game crowd. The lethal air blast range for such a vehicle is estimated to be 50 feet, and the falling glass hazard distance is estimated at 600 feet according to the Bureau of Alcohol, Tobacco, Firearms and Explosives Standards. In this event, damage would occur to vehicles, and depending on the proximity of other structures, damages would occur to the stadium complex itself. The exact amount of these damages is difficult to predict because of the large numbers of factors, including the type of structures nearby and the amount of insurance held by vehicle owners. It is estimated that the average replacement cost for a vehicle is \$20,000 and the average repair cost for damaged vehicles would be \$4,000.

**Results:** The following table presents the estimated human impacts of the scenario.

**Table X: Estimated Impact of Scenario #3, Improvised Explosive Device**

<b>Impact</b>	<b>Effect</b>
Deaths	1,391 persons
Trauma Injuries	2,438 persons
Urgent Care Injuries	11,935
Injuries not Requiring Hospitalization	4,467
Repair Costs for 100 Vehicles	\$400,000
Replacement Costs for 50 Vehicles	\$1,000,000

Source: Electronic Mass Casualty Assessment and Planning Scenarios by Johns Hopkins University

#### Consequence Analysis

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Terrorism Consequence Analysis**

<b>Subject</b>	<b>Potential Impacts</b>
Impact on the Public	Terrorist activities including bombings, kidnappings, shootings, and hijackings could cause considerable injury and death. An attack could kill and injure hundreds to thousands of people, which could overwhelm hospitals.

**Table x: Terrorism Consequence Analysis**

<b>Subject</b>	<b>Potential Impacts</b>
Impact on Responders	Attacks can create a dangerous environment and significant challenge for first responders, who may have to manage the evacuation of people, close areas, operate shelters, and take care of the injured. First responders may be a direct target of terrorism themselves from a secondary attack during response activities. Equipment may also be damaged or destroyed, which may lead to a decrease in response capabilities.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. A terrorist event may impact an agency's ability to maintain operations due to the potential to cause a significant injury to staff or impede travel.
Delivery of Services	The ability to deliver services can be impacted depending on the characteristics of the attack. Roadway and bridge closures may be required, as well as transit service disruptions. Businesses and places of commerce may completely shut down, which leads to the disruption of goods and services.
Property, Facilities, and Infrastructure	Transportation, governmental operations, and infrastructure facilities may be disrupted both directly and indirectly. Roads and bridges may be impacted if explosive devices are utilized in the attack. Access to homes and critical facilities such as hospitals, schools, and supermarkets may be impossible. If power loss occurs following an attack, it may lead to disruption of critical infrastructure and technology.
Impact on Environment	Terrorist attacks involving bombings and arson pose considerable negative impacts to the environment in the form of smoke and destruction of vegetation. A terrorist attack utilizing chemical, nuclear, and biological weapons pose a significantly higher risk to the environment by causing pollution, damaging sewer and wastewater treatment plants; or disturbing or killing wildlife, and adversely affecting nature preserves.
Economic Conditions	Local, county, and state resources may be severely depleted during a terrorist attack response. Private businesses may not be able to maintain operations during or after an incident if they are impacted, which would impact the economy.
Public Confidence in Governance	If government employees or facilities are targeted directly by terrorism, it will have a significant impact on the ability to govern. The public's confidence in the state's governance is affected by immediate response through direct and effective actions. Efficiency in response and recovery operations is critical in keeping public confidence.

#### 4.21.7 Hazard Planning Significance

Utilizing the above detailed formula for calculating the hazard planning significance for human caused and technological hazards, the following table details the rating of each criterion along with a composite rating:

**Table: Terrorism Planning Significance**

<b>County</b>	<b>Probability</b>	<b>Magnitude</b>	<b>Warning Time</b>	<b>Duration</b>	<b>Score</b>	<b>Planning Significance</b>
Butler	1	3	1	4	1.9	Low
Cowley	1	3	1	4	1.9	Low
Harper	1	3	1	4	1.9	Low
Harvey	1	3	1	4	1.9	Low
Kingman	1	3	1	4	1.9	Low
Marion	1	3	1	4	1.9	Low
McPherson	1	3	1	4	1.9	Low
Reno	1	3	1	4	1.9	Low
Rice	1	3	1	4	1.9	Low
Sedgwick	1	3	1	4	1.9	Low
Sumner	1	3	1	4	1.9	Low

## 4.22 Transmissible Disease

### 4.26.1 Hazard Description

A transmissible disease, also known as a communicable or infectious disease, is a type of illness caused by pathogens (such as bacteria, viruses, fungi, or parasites) that can be transmitted from one person or organism to another, directly or indirectly. These diseases can spread through various means, including person-to-person contact, respiratory droplets, contaminated food or water, vectors like mosquitoes, or contact with infected animals.

Transmissible diseases are characterized by their ability to pass from an infected individual to a susceptible host, leading to new cases of the disease. The transmission can occur through various routes, depending on the specific pathogen and the mode of transmission it utilizes. Examples of transmissible diseases include:

- Influenza: The flu is caused by influenza viruses and can spread through respiratory droplets when an infected person coughs or sneezes.
- West Nile virus: A mosquito-borne virus that can cause a range of illnesses in humans, from mild febrile symptoms to severe neurological disease. It is primarily transmitted to humans through the bite of infected mosquitoes.
- Malaria: Malaria is caused by Plasmodium parasites and is transmitted through the bite of infected female Anopheles mosquitoes.
- Salmonella Infection: This bacterial infection is often contracted through the consumption of contaminated food or water and can lead to gastrointestinal symptoms.
- Tuberculosis: Tuberculosis is caused by Mycobacterium tuberculosis and can be transmitted through the inhalation of respiratory droplets from an infected person with active disease.
- Measles: Measles is caused by the measles virus and spreads through respiratory droplets, making it highly contagious.

Of particular concern are novel transmissible diseases. This is a disease that is caused by a pathogen (such as a virus, bacterium, or other microorganism) that is newly recognized in a human population or is increasing in incidence or geographic range. These diseases are termed novel because they have not been previously identified or have not been known to affect humans in the past. Several factors can contribute to the emergence of novel transmissible diseases, including changes in human behavior, urbanization, deforestation, climate change, global travel, and the encroachment of humans into natural habitats. Defining characteristics of novel transmissible diseases: include

- New Pathogen or Strain: Novel transmissible diseases often involve a pathogen or strain of a pathogen that is new to humans. This may result from genetic mutations, cross-species transmission (zoonotic diseases), or the introduction of a pathogen to a new geographic area.
- Human Transmission: These diseases have the potential to spread from person to person, either through direct contact, respiratory droplets, contaminated surfaces, or other modes of transmission.
- Challenges in Control: Because these diseases are new and may have limited prior immunity in the population, they can pose challenges for public health authorities in terms of surveillance, diagnosis, treatment, and containment.

Novel transmissible diseases can have pandemic potential, meaning they can spread globally and affect a large portion of the world's population. Dealing with novel transmissible diseases requires a multi-pronged approach, including surveillance, early detection, containment measures, public health interventions, and research to understand the pathogen and develop effective countermeasures. It also underscores the importance of preparedness and global cooperation in responding to emerging infectious diseases.

#### 4.22.2 – Location and Extent

Kansas Region G's geographic and demographic characteristics make it vulnerable to the spread of transmissible diseases. The extent of a transmissible disease can vary widely depending on several factors, including:

- **Pathogen Characteristics:** The biological properties of the infectious agent, such as its mode of transmission, incubation period, and virulence, play a significant role. Pathogens that are highly contagious and have a short incubation period are more likely to spread rapidly.
- **Human Behavior:** Human behavior and practices, such as hygiene, travel, and social interactions, can influence the extent of disease spread. For example, frequent travel and close interpersonal contact can facilitate the rapid transmission of infectious diseases.
- **Public Health Measures:** The effectiveness of public health measures, such as quarantine, isolation, contact tracing, and vaccination, can limit the extent of disease spread. Prompt and coordinated public health responses can be crucial.
- **Geographic Factors:** The geographic spread of a disease can be influenced by factors like population density, climate, and geographic barriers. Dense urban areas may experience more rapid transmission, while isolated or remote regions may be less affected.
- **Healthcare Infrastructure:** The capacity of healthcare systems to detect, treat, and isolate cases can impact the extent of an outbreak. Overwhelmed healthcare systems can lead to a larger extent of disease.
- **Pre-existing Immunity:** If a portion of the population has pre-existing immunity to the disease, either due to prior exposure or vaccination, this can limit the extent of disease transmission.
- **Global Travel:** In an era of global travel, novel infectious diseases can quickly cross international borders, affecting multiple countries and regions.
- **Vaccination:** The availability and coverage of vaccines against the disease can significantly reduce the extent of an outbreak. High vaccination rates create herd immunity, protecting even those who are not vaccinated.
- **Mutation and Variants:** Some infectious agents may undergo mutations that affect their transmissibility or virulence. New variants can lead to changes in the extent and severity of the disease.
- **Public Awareness and Compliance:** Public awareness of the disease, willingness to follow public health guidance, and compliance with preventive measures can affect disease transmission rates.
- **Timeliness of Response:** The speed with which authorities and healthcare systems respond to an outbreak can have a substantial impact. Rapid detection and containment efforts can limit the extent of spread.

The extent of a transmissible disease can range from localized outbreaks that are quickly contained to global pandemics that affect large populations across multiple countries. The management of such diseases requires a combination of robust surveillance, effective public health interventions, research, and international collaboration to minimize their impact on human health and society.

#### 4.22.3 Previous Occurrences

One of the most common transmissible diseases within the Kanas Region G is Influenza. Influenza, commonly known as the flu, is a contagious respiratory illness caused by influenza viruses. It can affect humans, birds, and other animals. Influenza viruses are classified into types A, B, C, and D, with types A and B being the most common in humans and responsible for seasonal flu outbreaks. The following chart details deaths for the state from 2021 through 2023:

**Chart X: Percent of Deaths Associated with Pneumonia and Influenza, October 2020 to Present**

Source: Kansas Department of Health and Environment

The most notable recent novel infectious disease to strike Kansas Region G is COVID-19, also known as Coronavirus Disease 2019. COVID-19 is an infectious respiratory illness caused by a novel coronavirus known as SARS-CoV-2 (Severe Acute Respiratory Syndrome Coronavirus 2). It was first identified in December 2019 in the city of Wuhan, China, and spread globally leading to a pandemic. COVID-19 primarily spreads from person to person through respiratory droplets when an infected person coughs, sneezes, talks, or breathes. It can also spread by touching surfaces contaminated with the virus and then touching the face. Symptoms can range from mild to severe and may include fever, cough, shortness of breath, fatigue, muscle aches, loss of taste or smell, sore throat, congestion, and gastrointestinal symptoms like diarrhea. Some individuals may remain asymptomatic, meaning they carry the virus without displaying symptoms. While many people with COVID-19 experience mild to moderate symptoms and recover without hospitalization, the disease can be severe, especially among older adults and individuals with underlying health conditions. Severe cases can lead to pneumonia, acute respiratory distress syndrome, organ failure, and death. Available data from the Kansas Department of Health and Environment indicates the following for COVID-19 for Kansas:

- 946,56 cases
- 10,229 deaths

COVID-19 has had a profound impact on public health, economy, and daily life across Kansas Region G. Some of the key measures taken in Kansas Region G in response to the COVID-19 pandemic include:

- **Public Health Measures:** Kansas implemented various public health measures to slow the spread of the virus. These included stay-at-home orders, mask mandates, social distancing guidelines, and limits on gathering sizes.
- **Testing and Contact Tracing:** Kansas established testing sites and conducted contact tracing to identify and isolate individuals who had been exposed to the virus. Testing was widely available to the public.
- **Vaccination Efforts:** Kansas launched vaccination campaigns to administer COVID-19 vaccines to eligible residents. Mass vaccination sites, healthcare providers, and pharmacies played a role in the distribution of vaccines.

- **School Closures and Remote Learning:** Like many other states, Kansas Region G temporarily closed schools and shifted to remote learning to minimize the risk of virus transmission among students and staff.
- **Travel and Quarantine Measures:** Kansas issued travel advisories and quarantine requirements for travelers coming into the state, especially from areas with high infection rates.
- **Mask Mandates and Social Distancing:** Face mask mandates and social distancing measures were enforced in indoor public spaces and in situations where social distancing was not possible.

Additionally, COVID-19 had numerous, and oftentimes severe impacts on Kansas Region G, including:

- **Economic Repercussion:** Job losses, business closures, and economic strain on individuals and families were common within the Kansas Region G. Kansas, like other states, implemented economic relief measures.
- **Healthcare System Overload:** Hospitals and healthcare facilities in Kansas Region G worked to increase capacity to treat COVID-19 patients. There were efforts to secure additional medical supplies and equipment.
- **Protection of Vulnerable Populations:** Efforts were made to protect vulnerable populations, including the elderly and those with underlying health conditions, who were at higher risk of severe illness from COVID-19.
- **Educational Impact:** The pandemic disrupted education, with students and teachers adapting to remote learning. Schools implemented safety measures upon reopening.

The response to COVID-19 evolved as more information became available, and measures were adjusted based on the changing circumstances of the pandemic. Kansas Region G worked to balance public health concerns with the economic and social well-being of its residents. The state and region's response were guided by recommendations from health experts from the Centers for Disease Control.

#### **4.22.4 Probability of Future Events**

While it is impossible to predict with certainty when or if a transmissible disease outbreak will occur, the probability of occurrence can be estimated based on historical patterns and current global conditions. Factors to consider include:

- **Globalization:** Increased global travel and trade can facilitate the rapid spread of infectious diseases. The interconnectedness of the world means that a disease can quickly cross borders, increasing the risk of a pandemic.
- **Vaccine Coverage:** The level of vaccination coverage against preventable diseases can impact the likelihood of pandemics. Low vaccine coverage can lead to outbreaks that have pandemic potential.
- **Public Health Preparedness:** The readiness of healthcare systems, public health agencies, and governments to respond to outbreaks is crucial. Adequate preparedness can help contain outbreaks before they become pandemics.
- **Surveillance and Early Detection:** Improved surveillance systems and early detection mechanisms can help identify and contain outbreaks before they escalate to pandemics.
- **Scientific Advancements:** Advances in science and technology, such as the rapid development of vaccines and treatments, can influence our ability to respond to emerging infectious diseases.
- **Behavioral Factors:** Human behavior, including adherence to preventive measures like handwashing, mask-wearing, and vaccination, plays a role in disease transmission. Public health campaigns can influence behavior.
- **Climate Change:** Environmental changes driven by climate change can alter the geographic distribution of diseases and the behavior of vectors (like mosquitoes). This can affect disease transmission patterns and increase the risk of outbreaks.
- **Agriculture and Farming Practices:** The way animals are raised and farmed can impact the risk of zoonotic diseases, which are diseases transmitted from animals to humans. The probability of another pandemic is influenced by the frequency of spillover events (when a pathogen jumps from animals to humans). Factors like deforestation, urbanization, and increased contact with wildlife can contribute to these events.

Transmissible disease outbreaks can vary in their impact, and public health measures can mitigate their effects. Governments, international organizations, and scientists continuously monitor and assess the risk of transmissible diseases and work to improve preparedness and response capabilities.

In order to prevent the rapid spreads of transmissible diseases, the Kansas Department of Health and Environment tracks occurrences of the following diseases and conditions:

- Acute flaccid myelitis
- Anthrax
- Anaplasmosis
- Arboviral disease, neuroinvasive and nonneuroinvasive (including chikungunya virus, dengue virus, La Crosse, West Nile virus, and Zika virus)
- Babesiosis
- Botulism
- Brucellosis
- Campylobacteriosis
- Candida auris
- Carbapenem-resistant bacterial infection or colonization
- Chancroid
- Chickenpox (varicella)
- Chlamydia trachomatis infection
- Cholera
- Coccidioidomycosis
- Cryptosporidiosis
- Cyclosporiasis
- Diphtheria
- Ehrlichiosis
- Giardiasis
- Gonorrhea (include antibiotic susceptibility results, if performed)
- Haemophilus influenzae, invasive disease
- Hansen's disease (leprosy)
- Hantavirus
- Hemolytic uremic syndrome, post-diarrheal
- Hepatitis, viral (A, B, C, D, and E, acute and chronic)
- Histoplasmosis
- Human Immunodeficiency Virus (HIV) (
- Leptospirosis
- Influenza, novel A virus infection
- Legionellosis
- Listeriosis
- Lyme disease
- Malaria
- Measles (rubeola)
- Meningococcal disease
- Mumps
- Pertussis (whooping cough)
- Plague (Yersinia pestis)

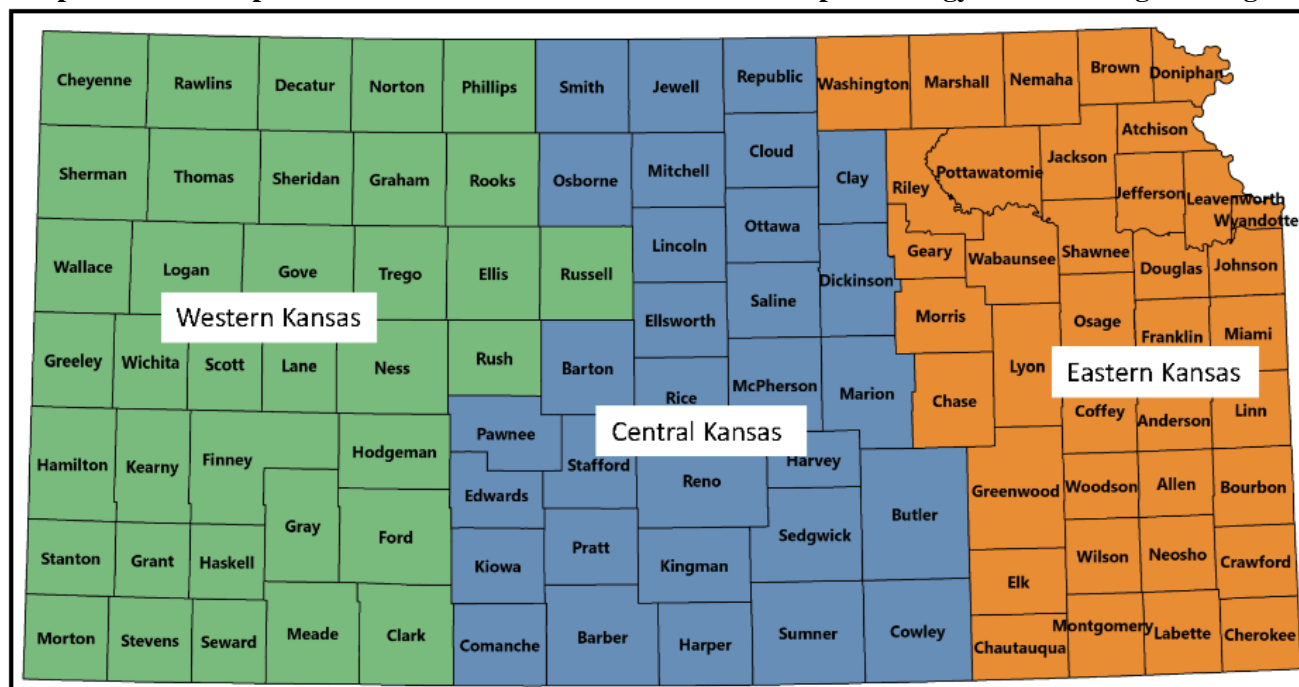

- Poliovirus
- Psittacosis
- Q Fever (*Coxiella burnetii*, acute and chronic)
- Rabies
- Rubella
- Salmonellosis, including typhoid fever
- Severe Acute Respiratory Syndrome-associated coronavirus (SARS-CoV) ☐ ☐
- Shiga toxin-producing *Escherichia coli*
- Shigellosis
- Smallpox
- Spotted fever rickettsiosis
- *Streptococcus pneumoniae*, invasive disease
- Syphilis, all stages, including congenital syphilis
- Tetanus
- Toxic shock syndrome, streptococcal and other
- Transmissible spongiform encephalopathy or prion disease
- Trichinellosis or trichinosis
- Tuberculosis
- Tularemia, including laboratory exposures
- Vancomycin-intermediate and resistant *Staphylococcus aureus*
- Vibriosis (all cholerae and non-cholerae *Vibrio* species) ☐
- Viral hemorrhagic fevers ☐
- Yellow fever

Kansas Region G Health Departments report all nationally notifiable conditions to the Centers for Disease Control using the National Electronic Disease Surveillance System to allow for rapid and appropriate response.

The Kansas Department of Health and Environment Field Epidemiology Services Program provides trained field epidemiologists to support epidemiological activities of local health departments. Field epidemiologists are the boots on the ground regionally for the state health department and serve as a liaison between the local health departments and the Kansas Department of Health and Environment. The four primary areas of support include:

- Investigation of complex or unusual infectious disease cases and large or complicated outbreaks
- Reporting and surveillance for reportable diseases
- Data analysis and reporting
- Public health training and education

**Map X: Kansas Department of Health and Environment Field Epidemiology Services Program Regions**

Source: Kansas Department of Health and Environment

#### 4.22.5 Projected Changes in Location, Intensity, Frequency, and Duration

A continued increase in international travel, both to and from Kansas, may increase the spread of infectious disease. The movement of people across diverse geographical regions brings together individuals with different immunological profiles. This mingling creates opportunities for the emergence of novel pathogens or the introduction of diseases into populations with limited immunity.

Climate change can have several impacts on the emergence and spread of transmissible diseases. While the relationship between climate change and transmissible diseases is complex, there are several ways in which climate change can influence disease dynamics including:

- **Altered Disease Transmission Patterns in Vector-Borne Diseases:** Climate change can affect the distribution and behavior of disease vectors (mosquitoes and ticks) by influencing temperature and precipitation patterns. This can lead to the expansion of diseases like malaria, dengue fever, and Lyme disease into new geographic areas.
- **Extended Transmission Seasons:** Rising temperatures can lengthen the transmission seasons for certain diseases, allowing them to be active for a more extended period each year.
- **Changes in Pathogen Survival:** Some pathogens can survive longer in warmer and wetter conditions. This can affect the persistence of infectious agents in the environment.
- **Increased Risk of Zoonotic Diseases:** Climate change can disrupt ecosystems and alter the habitats and migration patterns of wildlife. This can lead to increased interactions between humans, domestic animals, and wildlife, potentially facilitating the transmission of zoonotic diseases (diseases that originate in animals) to humans.
- **Weakened Immune Response:** Climate-related stressors, such as extreme heat events, can weaken the immune systems of vulnerable populations, making them more susceptible to infectious diseases.

To mitigate the impacts of climate change, public health measures, adaptation strategies, and international cooperation are essential, and may include:

- Strengthening disease surveillance systems to monitor changing disease patterns.
- Implementing vector control measures in areas at risk of vector-borne diseases.
- Enhancing healthcare infrastructure resilience to climate-related disasters.
- Promoting climate-resilient agricultural practices to ensure food security.
- Supporting research on the links between climate change and infectious diseases.
- Raising awareness and educating communities about the risks and preventive measures.

#### **4.22.6 Vulnerability and Impact**

People can be vulnerable to transmissible diseases due to various factors that influence their susceptibility to infection and the potential severity of illness. These vulnerabilities can be influenced by individual, societal, and environmental factors, and may include:

- **Lack of Immunity:** Many transmissible diseases are ones that people have little to no immunity to.
- **Vaccination Status:** Vaccination can provide immunity against certain diseases. People who are not vaccinated or have not received booster shots may be more vulnerable.
- **Age:** Infants, young children, and the elderly often have weaker immune systems, making them more susceptible to infections and complications.
- **Underlying Health Conditions:** Individuals with underlying health conditions, such as immunodeficiency disorders, chronic diseases, or respiratory conditions, may be more vulnerable to severe illness.
- **Medication and Treatment Availability:** The availability of medications or treatments specific to the disease can impact vulnerability. Rapid access to appropriate treatments can be life-saving.
- **Population Density:** Highly populated areas can facilitate the rapid spread of diseases, making people in densely populated regions more vulnerable.
- **Sanitation and Hygiene:** Poor sanitation and hygiene practices can increase the risk of disease transmission. Access to clean water and sanitation facilities is crucial for reducing vulnerability.
- **Access to Healthcare:** The availability and accessibility of healthcare services, including diagnostic testing and medical treatment, can significantly impact the outcome of a novel transmissible disease.
- **Public Awareness:** People who are unaware of the risks associated with a novel transmissible disease or who do not know how to protect themselves may be more vulnerable.
- **Behavioral Factors:** People's behavior, such as adherence to public health guidelines (e.g., handwashing, wearing masks), can influence vulnerability.
- **Fear and Panic:** Fear and panic can hinder effective responses, potentially increasing vulnerability.
- **Access to Information:** Timely and accurate information can empower individuals to take protective measures. Lack of information or misinformation can increase vulnerability.

The spread of a transmissible disease can have severe and far-reaching impacts on human health and society, , and can include:

- **Illness and Death:** The most immediate impact is the potential for widespread illness and death. Depending on the disease, the severity of illness can range from mild to life-threatening.
- **Healthcare Overload:** A rapidly spreading disease can quickly overwhelm healthcare systems, leading to shortages of medical supplies, hospital beds, and healthcare personnel. The ability to provide timely medical care may be compromised.
- **Social Disruption:** Social disruption can occur due to isolation and quarantine measures, as well as the need for social distancing. Schools, businesses, and public gatherings may be canceled or limited, affecting daily life and routines.

- **Psychological Trauma:** Survivors of a transmissible disease may experience long-lasting psychological trauma due to the fear of infection, the loss of loved ones, and the overall trauma of the event.
- **Long-Term Health Effects:** Some diseases can cause long-term health effects in survivors, including chronic illnesses and disabilities.

It is important to note that public health agencies and emergency responders work to minimize vulnerabilities by implementing preventive measures, conducting public awareness campaigns, and having response plans in place. Preparedness efforts, including vaccination programs, stockpiling of medical supplies, and coordination among healthcare providers, are critical for reducing vulnerabilities.

The direct risk or vulnerability to property and critical facilities from a transmissible disease is generally limited. While unlikely, transmissible diseases could possibly be moved through a facility's ventilation system. An incident like this would not pose a direct risk to the structure's integrity; however, considerable contamination of the facility may occur, requiring decontamination and potential loss of access to the building for a considerable length of time. Critical facilities and infrastructure generally will not suffer direct impacts from a novel transmissible disease event. Employee absenteeism could indirectly impact the ability for a critical facility to operate. Without necessary operators, critical infrastructure may be susceptible to indirect failure.

Zoonotic diseases are infections that can be transmitted between animals and humans. These diseases can have significant impacts on both human and animal populations, as well as broader environmental consequences. Some diseases have caused significant declines and extinctions in affected species and can infect domesticated animals, leading to economic losses in the agricultural sector. Diseases like avian influenza and foot-and-mouth disease can result in culling of livestock to prevent disease spread. Zoonotic diseases can also influence the health and dynamics of ecosystems. Changes in wildlife populations due to disease can have cascading effects on biodiversity and ecosystem function.

The rapid spread of a transmissible disease can have wide-ranging impacts on governmental operations, affecting functions and public safety. These impacts can disrupt government operations, strain resources, and pose challenges to maintaining public order, and can include:

- **Emergency Response and Healthcare:** Kansas Region G would need to rapidly mobilize emergency response teams, medical personnel, and healthcare facilities. The surge in demand for medical resources can strain healthcare systems, including hospitals, clinics, and emergency services.
- **Public Health Services:** County health departments would play a critical role in disease surveillance, contact tracing, and public health messaging. A transmissible disease could require additional personnel and resources to manage the outbreak.
- **Resource Allocation:** County health departments may need to help allocate resources for medical supplies, pharmaceuticals, personal protective equipment, and vaccine distribution. Competition for limited resources can lead to shortages and increased costs.
- **Transportation and Supply Chain Disruption:** Quarantine measures, travel restrictions, and supply chain disruptions can affect the movement of essential goods and services, including medical supplies, food, and fuel.
- **Economic Impact:** The economic consequences of a transmissible disease can be severe. Business closures, reduced consumer confidence, and trade disruptions can lead to financial losses, unemployment, and economic instability.
- **Education Disruption:** School closures and disruptions to education can affect students' learning and parental work arrangements, leading to social and economic consequences.
- **Public Services:** Essential public services, such as law enforcement, fire services, and sanitation, may be stretched thin due to the demands of responding to the outbreak.

- **Social Distancing and Isolation Measures:** Government directives for social distancing, isolation, and quarantine can impact daily life, social interactions, and public gatherings. The enforcement of such measures can be challenging.
- **Psychological and Societal Impact:** Fear and anxiety can spread rapidly during disease transmission, affecting public morale and mental health. Disinformation and rumors can compound these psychological impacts.

### Consequence Analysis

This consequence analysis lists the potential impacts of a hazard on various elements of community and state infrastructure. The impact of each hazard is evaluated in terms of disruption of operations, recovery challenges, and overall wellbeing to all Kansas Region G residents and first responder personnel. The consequence analysis supplements the hazard profile by analyzing specific impacts.

**Table x: Transmissible Disease Consequence Analysis**

<b>Subject</b>	<b>Potential Impacts</b>
Impact on the Public	Depending on the scale of outbreak and type of disease, residents may be at risk of illness or death. Population density may play a role in the spread of disease, with urban areas being more likely to be impacted than rural areas. Specific impacts to residents will be dependent upon the type of disease and how it is transmitted.
Impact on Responders	Epidemics pose a unique risk to first responders because they are more likely to be exposed to a transmissible disease before it has been identified. If the novel transmissible disease infects first responders and healthcare practitioners, the provision of public safety and public health services may be significantly impacted.
Continuity of Operations	Local jurisdictions maintain continuity plans which can be enacted as necessary based on the situation. A transmissible disease may impact an agency's ability to maintain continuity of operations based on the potential to create high levels employee absenteeism. Employee absenteeism could also hinder the ability to fulfill critical operations as well as implementation and maintenance of the plan itself.
Delivery of Services	Epidemics may cause disruption of services in the event of employee absenteeism.
Property, Facilities, and Infrastructure	It is unlikely that an epidemic would have direct effects on critical infrastructure or other facilities or structures. However, under cases of absenteeism, it is possible that regular maintenance or repairs would not be performed, resulting in disrepair.
Impact on Environment	In some cases, disease outbreak is caused by infections spread from animals to humans. Under these circumstances, infections may be spread as the result of normal care (proximity) to sick animals or consumption of byproducts of infected animals. Infected animals may die as a result of the disease. Timely removal of infected animal carcasses may help to reduce the spread of the disease among animals.
Economic Conditions	Depending on the scale of outbreak and type of disease, a localized infectious disease outbreak could impact Kansas Region G significantly. In the event residents and workers became infected from an epidemic, employee absenteeism would increase and the length of time necessary to recover could be significant.
Public Confidence in Governance	Governmental response requires direct actions that must be immediate and effective to maintain public confidence. If government functionality is reduced by absenteeism, the public's confidence in governance may be reduced. The ability to perform critical functions will directly impact the community's perception of government. Maintenance of these operations will be critical to response and recovery operations.

#### 4.22.7 Hazard Planning Significance

Utilizing the above detailed formula for calculating the hazard planning significance for human caused and technological hazards, the following table details the rating of each criterion along with a composite rating:

**Table: Transmissible Disease Planning Significance**

<b>County</b>	<b>Probability</b>	<b>Magnitude</b>	<b>Warning Time</b>	<b>Duration</b>	<b>Score</b>	<b>Planning Significance</b>
Butler	3	3	1	4	2.8	Moderate
Cowley	3	3	1	4	2.8	Moderate
Harper	3	3	1	4	2.8	Moderate
Harvey	3	3	1	4	2.8	Moderate
Kingman	3	3	1	4	2.8	Moderate
Marion	3	3	1	4	2.8	Moderate
McPherson	3	3	1	4	2.8	Moderate
Reno	3	3	1	4	2.8	Moderate
Rice	3	3	1	4	2.8	Moderate
Sedgwick	4	3	2	4	3.4	High
Sumner	3	3	1	4	2.8	Moderate

## Section 5 –Capability Assessment

### 5.1 Introduction

This capability overview for Kansas Region G documents programs, policies, and funding mechanisms for participating jurisdictions. All listed capabilities documented in the previous HMP were reviewed for relevance and updated to reflect the current environment, as necessary. Additionally, any programs, policies, or funding mechanisms that are no longer applicable, are outdated, or are no longer in existence have been removed. As part of this process, updated jurisdictional capability profiles were sent for review and, if necessary, further revision.

This section of the plan discusses the current capacity of regional communities to mitigate the effects of identified hazards. A capability assessment is conducted to determine the ability of a jurisdiction to execute a comprehensive mitigation strategy, and to identify potential opportunities for establishing or enhancing specific mitigation policies, programs or projects.

A capability assessment helps to determine which mitigation actions are practical based on a jurisdiction’s fiscal, staffing and political resources, and consists of:

- An inventory of relevant plans, ordinances, or programs already in place
- An analysis capacity to carry them out.

A thoughtful review of jurisdictional capabilities will assist in determining gaps that could limit current or proposed mitigation activities, or potentially aggravate a jurisdiction’s vulnerability to an identified hazard. Additionally, a capability assessment can detail current successful mitigation actions that should continue to receive support.

### 5.2 Granted Authority

In implementing a mitigation plan or specific action, a local jurisdiction may utilize any or all of the four broad types of government authority granted by the State of Kansas. The four types of authority are defined as:

- Regulation
- Acquisition
- Taxation
- Spending

The scope of regulation is subject to constraints, however, as all of Kansas’ political subdivisions must not act without proper delegation from the State. Under a principle known as “Dillon’s Rule,” all power is vested in the State and can only be exercised by local governments to the extent it is delegated.

The power of acquisition can be a useful tool for pursuing local mitigation goals. Local governments may find the most effective method for completely “hazard-proofing” a particular piece of property or area is to acquire the property, thus removing the property from the private market and eliminating or reducing the possibility of inappropriate development occurring. Kansas legislation empowers cities, towns, counties to acquire property for public purpose by gift, grant, devise, bequest, exchange, purchase, lease or eminent domain (County Home Rule Powers, K.S.A. 19-101, 19-101a, 19-212).

The power to levy taxes and special assessments is an important tool delegated to local governments by Kansas law. The power of taxation extends beyond merely the collection of revenue and can have a profound impact on the pattern of development in the community. Communities have the power to set preferential tax rates for areas which are more suitable for development in order to discourage development in otherwise hazardous areas. Local units of government also have the authority to levy special assessments on property owners for all or part of the costs of acquiring, constructing, reconstructing, extending or otherwise building or improving flood control within a designated area. This

can serve to increase the cost of building in such areas, thereby discouraging development. Because the usual methods of apportionment seem mechanical and arbitrary, and because the tax burden on a particular piece of property is often quite large, the major constraint in using special assessments is political. Special assessments seem to offer little in terms of control over land use in developing areas. They can, however, be used to finance the provision of necessary services within municipal or county boundaries. In addition, they are useful in distributing to the new property owners the costs of the infrastructure required by new development.

The Kansas General Assembly allocated the ability to local governments to make expenditures in the public interest. Hazard mitigation principles can be made a routine part of all spending decisions made by the local government, including the adoption of annual budgets and a Capital Improvement Plan. A Capital Improvement Plan is a schedule for the provision of municipal or county services over a specified period of time. Capital programming, by itself, can be used as a growth management technique, with a view to hazard mitigation. By tentatively committing itself to a timetable for the provision of capital to extend services, a community can control growth to some extent. In addition to formulating a timetable for the provision of services, a local community can regulate the extension of and access to services. A Capital Improvement Plan that is coordinated with extension and access policies can provide a significant degree of control over the location and timing of growth. These tools can also influence the cost of growth. If the Capital Improvement Plan is effective in directing growth away from environmentally sensitive or high hazard areas.

### **5.3 Regulation of Development**

The regulation of development plays a crucial role in helping a community become more resilient in the face of various hazards. Effective regulation of development contributes to community resilience through:

- **Risk Reduction:** Regulations guide land use and construction practices, ensuring that they provide strong protection against hazards.
- **Public Safety:** Building codes and land-use regulations establish minimum safety standards for construction, including structural integrity, fire resistance, and the use of resilient materials.
- **Infrastructure Resilience:** Regulations may require infrastructure improvements, such as the construction of resilient roads, bridges, utility systems, and drainage systems. This strengthens a community's ability to withstand hazards, ensures the continued operation of critical services, and aids in recovery.
- **Floodplain Management:** Regulations in flood-prone areas can mandate elevation requirements for new construction, ensuring that structures are built above the base flood elevation. This minimizes flood damage, reduces the need for costly post-disaster repairs, and protects property values.
- **Land Use Planning:** Effective land-use planning helps communities avoid inappropriate development in areas at high risk of hazards.
- **Community Awareness:** Public education and outreach can be incorporated into regulations, requiring communities to inform residents about local hazards, evacuation routes, and preparedness. Informed residents are more likely to take protective measures and respond effectively to disasters.

The following sections provide further detail on building codes, zoning ordinances, and floodplain management.

#### **Building Codes**

In Kansas, the authority for enacting and enforcing building codes lies with local governments, such as cities and counties. Each jurisdiction can adopt its own building codes, which can be based on national or international building codes like the International Building Code or the International Residential Code.

Building codes play a critical role in enhancing the resilience of buildings and communities to various hazards. In Kansas Region G, locally instituted and enforced building codes provide for:

- **Structural Integrity:** Building codes set standards for the structural design and construction of buildings. These standards ensure that structures are built to withstand the forces and stresses imposed by hazards such as

earthquakes, tornadoes, and high winds. Reinforced foundations, bracing systems, and other structural components are designed to resist damage and prevent catastrophic failures during disasters.

- **Life Safety:** Building codes include provisions for fire safety, emergency egress, and the use of fire-resistant materials.
- **Resistant Materials:** Building codes often specify the use of hazard-resistant materials.
- **Foundations and Elevation:** Codes in flood-prone areas may require buildings to be elevated above the base flood elevation to reduce the risk of inundation and damage. Properly designed foundations can resist soil movement and mitigate flood damage.
- **Seismic Retrofitting:** In earthquake-prone regions, building codes mandate seismic retrofitting measures, such as bracing, shear walls, and base isolation systems, to minimize structural damage during seismic events.
- **Wind Load Considerations:** Building codes in areas susceptible to high winds stipulate requirements for wind load resistance. This includes factors like roof designs, fastening systems, and reinforced structural elements to withstand strong winds.
- **Accessibility and Life Support:** Building codes incorporate accessibility standards, ensuring that buildings are designed to accommodate all individuals. This is crucial during and after disasters when people with mobility issues may require assistance. Accessible features also benefit emergency responders and support recovery efforts.
- **Retrofitting Existing Buildings:** Building codes may require the retrofitting of older structures to meet modern safety standards.
- **Public Awareness:** Building codes promote public awareness of hazards and the importance of resilient construction. This can lead to informed decision-making by property owners, builders, and developers, resulting in safer structures.

As building codes vary by jurisdiction, it is essential to contact the local building department for the most accurate information concerning application and enforcement.

The Building Code Effectiveness Grading Schedule assesses the building codes in effect in a particular community and how the community enforces its building codes, with special emphasis on mitigation of losses from natural hazards. The program assigns each participating municipality a Building Code Effectiveness Grading Schedule grade of 1 (exemplary commitment to building code enforcement) to 10 (lowest possible score). The following graph illustrates the rating for each rated State of Kansas participating municipalities.

**Chart X: Building Code Effectiveness Grading Schedule for Kansas**

Source: Building Code Effectiveness Grading Schedule

The average score for the State of Kansas was 26 (or a Class 8) rating for commercial, and a 25 (Class 8) for residential.

## **Zoning Ordinances**

Zoning ordinances in Kansas Region G govern land use, development, and building requirements. These ordinances work by dividing the land into different zoning districts and establishing rules and guidelines for land use, building placement, density, and setback within the zoning districts. In general, zoning ordinances establish:

- **Zoning districts:** Areas designated for specific types of land uses, such as residential, commercial, industrial, agricultural, mixed-use, or special districts.
- **Land usage within a zoning district:** Specifications as to which activities, buildings, and operations are permitted in each zoning district.
- **Enforcement:** Zoning ordinances are enforced by the local building department or zoning enforcement officers.

Zoning is the traditional, and most common, tool available to local jurisdictions to control the use of land. Zoning is used to promote health, safety, and the general welfare of the community. Zoning is used to dictate the type of land use and to set minimum specifications for use such as lot size, building height and setbacks, and density of population.

Legal authority for Kansas Region G local governments to adopt and implement zoning regulations is found at K.S.A. 12-741, which provides for the enactment of planning and zoning laws and regulations by cities and counties. The components of local zoning ordinances are detailed at K.S.A. 12-753(a), and include the provision for the adoption or amendment of zoning regulations and the provision for restricting and regulating the height, number of stories and size of buildings.

Zoning ordinances play a significant role in enhancing hazard resilience for communities and can help reduce vulnerability to various natural and man-made hazards by regulating land use and development practices. In Kansas Region G, locally instituted and enforced zoning ordinances provide for:

- **Land Use Planning:** Zoning ordinances designate land use zones within a community, ensuring that certain areas are reserved for particular uses. This can prevent the construction of critical infrastructure, homes, or businesses in high-risk zones, such as floodplains or wildfire-prone areas.
- **Setback Requirements:** Zoning ordinances often mandate specific setbacks, which are distances between structures and property lines or natural features. These setbacks can help prevent buildings from being too close to potential hazards, potentially reducing the risk of damage.
- **Building Height and Design Standards:** Zoning codes can establish building height limits to reduce exposure to certain hazards. Design standards, including materials and construction methods, can be specified to make structures more resilient.
- **Floodplain Management:** Many zoning ordinances incorporate floodplain regulations, which dictate where and how buildings can be constructed within flood-prone areas. These regulations may require buildings to be elevated, use flood-resistant materials, or include openings to allow floodwaters to pass through.
- **Wildfire Mitigation Zones:** In regions susceptible to wildfires, zoning ordinances can establish wildfire mitigation zones with specific requirements for defensible space, fire-resistant landscaping, and building materials to reduce the risk of wildfires spreading to structures.

In addition to zoning ordinances, historic preservation is an important consideration for all jurisdictions within Kansas Region G. Historic preservation is enacted under K.S.A. 12-755(a)(3), and provides local governments the authority they need to adopt zoning regulations to preserve structures listed on local, state, or national historic registers.

Properly applied, zoning restriction and historic preservation are some of the most effective hazard mitigation tools available against a wide variety of hazards.

## **Floodplain Management Standards**

Floodplain ordinances and management are one of the most effective hazard mitigation tools available against flooding.

Local floodplain ordinances, required for NFIP participants, are often used to prevent inappropriate development in floodplains and to reduce flood hazards. In general, they allow the jurisdiction to:

- Minimize the extent of floods by preventing obstructions that inhibit water flow and increase flood height and damage.
- Prevent and minimize loss of life, injuries, and property damage in flood hazard areas.
- Promote the public health, safety and welfare of citizens in flood hazard areas.
- Manage planned growth.
- Grant permits for use in development within special flood hazard areas that are consistent with the community ordinance and the NFIP under 44 CFR 60.3.

The NFIP floodplain management regulations work alongside local building codes by providing specific flood-related requirements that must be met in addition to general building code standards. In NFIP communities, when constructing or substantially improving a structure in a Special Flood Hazard Area (SFHA), the structure must be elevated to or above the Base Flood Elevation (BFE), which is a requirement imposed by the NFIP's regulations.

The following table details the status of these codes and ordinances for participating jurisdictions:

**Table X: Jurisdictional Codes and Ordinances**

<b>Jurisdiction</b>	<b>Building Code</b>	<b>Floodplain Ordinance</b>	<b>Zoning Ordinance</b>

#### **5.4 Jurisdictional Compliance with NFIP**

All NFIP participating jurisdictions are required to meet the minimum standards set forth in the program. The jurisdictions' NFIP coordinator ensures all new construction projects are properly surveyed and receive an elevation certificate.

NFIP participants are committed to continued involvement and compliance. To help facilitate compliance, NFIP participating jurisdictions:

- Adopted floodplain regulations through local ordinance
- Enforces floodplain ordinances through building restrictions
- Regulates new construction in Special Flood Hazard Areas as outlined in their floodplain ordinance
- Utilizes FEMA DFIRMs, where available
- Monitors floodplain activities

Additionally, when structures located in the Special Flood Hazard Areas are substantially modified (more than 50% damaged or improved) they are required to be brought into compliance with current NFIP standards and local building codes. Jurisdictional NFIP Coordinators are responsible for substantial damage and improvement determinations. These determinations are required for compliance in the NFIP.

Key to achieving across the board reduction in flood damages is a robust community assistance, education, and awareness program. As such, NFIP participating jurisdictions will continue to develop both electronic (including social media) and in person outreach activities.

#### **5.5 Jurisdictional Plans**

Planning plays a critical role in hazard mitigation by helping communities identify, assess, and reduce risks associated with natural and man-made hazards. Effective planning involves a proactive, strategic, and comprehensive approach to minimize the impact of disasters and enhance community resilience. Jurisdictions were asked if they had completed the following plans:

- **Comprehensive Plan:** A comprehensive plan establishes the overall vision for a jurisdiction and serves as a guide to decision making, and generally contains information on demographics, land use, transportation, and facilities. As a comprehensive plan is broad in scope the integration of hazard mitigation measures can enhance the likelihood of achieving risk reduction goals.
- **Emergency Operations Plan:** An emergency operations plan outlines the responsibility and means and methods by which resources are deployed during and following an emergency or disaster. In Kansas Region G, the overarching county provides emergency operation planning for jurisdictions within its borders.

- **Fire Mitigation Plan:** A fire mitigation plan is used to mitigate a jurisdiction's wildfire risk and vulnerability. The plan documents areas with an elevated risk of wildfires, and identifies the actions taken to decrease the risk. A fire mitigation plan can influence and prioritize future funding for hazardous fuel reduction projects, including where and how federal agencies implement fuel reduction projects on federal lands.
- **Flood Mitigation Assistance Plan:** The purpose of the flood mitigation assistance plan is to reduce or eliminate the long-term risk of flood damage to buildings and other structures insured under the NFIP.

The following table details the status of these plan types for each participating jurisdiction:

## 5.6 Challenges and Opportunities for Capability Improvement

As always, challenges exist for all participating jurisdictions due to the day-to-day demands of the working environment including staffing issues, budget restrictions, and staffing turnover. These issues can, and do, impact the utilization and incorporation of the HMP and the completion of identified hazard mitigation projects.

As part of this planning process, the MPC worked to identify gaps and deficiencies identified in the completion of this HMP. Resulting from this assessment is a series of problem statements, concise descriptions of issues or challenges that need to be addressed. These problem statements were determined to be applicable to all participating jurisdictions:

- Continued climate change is driving an increased incidence of major hazard occurrences, stressing the response, recovery, and mitigation capabilities of even the most prepared jurisdiction.
- Available funding for the completion of hazard mitigation projects is at a premium, with all participating jurisdiction seeing minimal room in the budget for any required project match.
- The difficulties in applying for and managing hazard mitigation grants is beyond the capability of smaller jurisdictions.
- Staffing at all levels is stretched thin, with many personnel wearing multiple hats, compromising mitigation capabilities.

Improving capabilities can lead to enhanced performance, increased efficiency, and better outcomes in hazard mitigation planning and implementation. The following identify recommended improvements for all jurisdictions, with some recommendations being applicable to all jurisdictions, and other being specific to identified jurisdictions:

- All participating jurisdictions should build a relationship with local meteorologists and the NWS to give priority access to rapidly developing weather conditions.
- All participating jurisdictions could receive instruction from the State of Kansas Division of Emergency Management /Homeland Security and FEMA Region VII on grant application processes and grant management strategies. These classes could help all participating jurisdictions receive available grant funding.
- All participating jurisdictions should consider adoption of the 2021 International Building Codes to ensure current constructions standards, including climate resiliency standards.
- Participating jurisdictions without a long-term community plan would benefit from the creation of a comprehensive plan to help plan and budget for hazard mitigation measures, policies, and procedures. Legal authority for Kansas local governments to develop comprehensive plans, both individually and with other jurisdictions, is found at K.S.A 12-747 and K.S.A. 19-2958. The statute also authorizes county planning commissions to develop comprehensive plans for unincorporated areas, and for cities, where appropriate.
- Jurisdictions that do not currently participate in the NFIP should enroll in the program to allow citizens to purchase federally backed flood insurance.
- Current NFIP participants should apply for membership in the CRS to allow citizens to receive discounts off their federally backed flood insurance policies.

- All participating jurisdictions should explore engaging in public-private emergency planning partnerships to further increase hazard resiliency through the infusion of additional funding and expertise to help complete mitigation projects.

Additionally, to help overcome many of these identified challenges, participating jurisdictions will work collaboratively using the following strategies, as appropriate:

- **Innovation and Adaptation:** Foster a culture of innovation and adaptability. Encourage employees to think creatively, embrace change, and explore new ways of doing things to overcome challenges.
- **Training and Development:** Invest in training and development to enhance skills and knowledge.
- **Communication Improvement:** Enhance communications and provide clear and transparent communication when sharing information, aligning teams, and addressing concerns.
- **Collaboration and Teamwork:** Encourage collaboration and teamwork which allows for the pooling of diverse skills and perspectives, leading to more effective problem-solving (the MPC is a good example of effective use of this strategy).
- **Technology Adoption:** Embrace technology to streamline operations and enhance productivity.
- **Agile Project Management:** Implement agile project management methodologies to enhance flexibility and responsiveness to changing conditions. Agile approaches allow teams to adapt quickly to challenges.

As appropriate, these strategies will be tailored for specific circumstances, with a combination of these strategies often being more effective than relying on a single approach.

## Section 6 – Mitigation Strategy

### 6.1 Introduction

As part of this planning effort, Kansas Region G participating jurisdictions worked to minimize the risk of future impacts from identified hazards to all citizens of the region. In an attempt to shape future regulations, ordinances and policy decisions the MPC reviewed, revised, and developed a comprehensive hazard mitigation strategy. This comprehensive strategy includes:

- Goals to guide the selection of activities to mitigate and reduce potential loss.
- A discussion of funding capabilities for hazard mitigation projects.
- Identification, evaluation, and prioritization of mitigation actions along with potential funding sources.

Kansas Region G's mitigation strategy promotes long-term hazard resilience that will have a positive impact on quality-of-life issues. By minimizing both the exposure to, and potential impacts from, identified hazards jurisdictions can expect to minimize injuries and loss of life, reduce property damage, and minimize the day to day social and economic disruptions that follow hazard events.

### 6.2 Goals and Objectives

Kansas Region G's overall mitigation goal is to minimize the protect lives and properties within the region from the impacts of hazards identified in this plan. Based on discussion with the discussions by the MPC, it was determined that the goals (desired outcomes) identified in the 2019 HMP remained viable and valid. The following represent the identified goals for the 2024 HMP:

- **Goal 1:** Reduce the risk to the people and property from the identified hazards in this plan.
- **Goal 2:** Work to protect all vulnerable populations, structures, and critical facilities from the impacts of the identified hazards.
- **Goal 3:** Improve public outreach initiatives to include education, awareness, and partnerships with all entities in order to enhance the understanding identified hazards and hazard mitigation opportunities.
- **Goal 4:** Enhance communication and coordination among all agencies and between agencies and the public.

The Kansas Region G MPC and participating jurisdictions will continuously evaluate these identified goals and objectives against current capabilities and conditions. As part of this process, the MPC will collect and analyze data and feedback from participating jurisdictions and plan stakeholders to help identify gaps, roadblocks, and achievements. Using this information, strategies will be developed to bridge identified gaps, remove identified roadblocks, and celebrate identified successes in achieving the goals of this HMP. Additionally, when necessary, the Kansas Region G MPC will modify, update, or expand identified goals based on the review process.

In addition, the Kansas Region G MPC will work with all local, county, regional, and state agencies and policy makers to help integrate the goals delineated in the HMP and goals and plans for combating climate change.

### 6.3 Review and Creation of Hazard Mitigation Actions

Hazard mitigation actions are proactive measures taken to reduce or eliminate the long-term risk and impact of natural and human-made hazards. These actions are designed to minimize the damage caused by disasters and contribute to the overall resilience of communities and infrastructure.

For this plan update members of the MPC were provided with a complete list of previously identified mitigation actions and asked to review them to determine their status. Previously identified mitigation status was reported using the following definitions:

- **Completed:** The action has been fully completed.
- **Not Completed:** The action was not started or has been started and is not completed.

- **Revised:** Action has been revised to reflect current planning environment or identified changes.
- **Cancelled:** The action has been removed from consideration due to either a lack of resources or changing mitigation priorities.
- **Ongoing:** The action is completed and has become an ongoing activity or capability.

Additionally, MPC members and stakeholders were provided with opportunities to identify and incorporate newly identified actions based on the changing hazard environment or previously unidentified needs.

In preparing a mitigation strategy all reasonable and obtainable mitigation actions were considered to help achieve the general goals. Priorities were developed based on past damages, existing exposure to risk, and weaknesses identified by the State and local capability assessments. In identifying mitigation actions, the following activities were considered:

- The use of applicable building construction standards.
- Hazard avoidance through appropriate land-use practices.
- Relocation, retrofitting, or removal of structures at risk.
- Removal or elimination of the hazard.
- Reduction or limitation of the amount or size of the hazard.
- Segregation of the hazard from that which is to be protected.
- Modification of the basic characteristics of the hazard.
- Control of the rate of release of the hazard.
- Provision of protective systems or equipment for both cyber or physical risks.
- Establishment of hazard warning and communication procedures.
- Redundancy or duplication of essential personnel, critical systems, equipment, and information materials.

In general, all identified mitigation actions were classified under one of the following broad categories:

- **Local plans and regulations:** Actions that create or update plans to reflect situational changes and/or actions that aid in the creation, revision, or adoption of regulations related to hazard mitigation and management.
- **Natural resource protection:** Actions that, in addition to minimizing hazard losses, also preserve or restore the functions of natural systems.
- **Preparedness and response:** Emergency response or operational preparedness actions.
- **Public education and awareness:** Actions to inform and educate citizens, elected officials, and property owners about the hazards and potential ways to mitigate them.
- **Structural:** Actions that the modification of existing buildings or structures or involve the construction of structures to reduce the impact of hazard.

#### 6.4 Prioritization of Mitigation Actions

The MPC and subject matter experts worked together to prioritize both previously identified and newly identified hazard mitigation actions. The methodology used to determine mitigation action priorities was based upon the following:

- Review of the updated risk assessments.
- Review of revised goals and objectives.
- Review of capabilities.

A multi-pronged and flexible analysis method was used for determining and prioritizing mitigation actions. An initial review of previously identified but not completed actions was conducted to ensure that, based on current condition and capabilities, the actions were still viable. Actions that were considered viable were retained in this plan update, with minor revisions completed as necessary.

For identified actions that were retained, and for newly identified actions, the FEMA recommended Social, Technical, Administrative, Political, Legal, Economic, and Environmental (STAPLEE) criteria were used to assist with prioritization. The following table details the STAPLEE criteria:

**Table X: STAPLEE Review Criteria**

Criteria	Discussion	Example Considerations
<b>Social</b>	There should be community acceptance and support for the mitigation action?	Does the action have community acceptance? Will the proposed action adversely affect one segment of the population?
<b>Technical</b>	The proposed mitigation action should be technically feasible and should provide a long-term reduction in losses.	How effective is the action in avoiding or reducing future losses? Does it solve a problem or only a symptom? Does the action create additional problems?
<b>Administrative</b>	Personnel and administrative capabilities should be available to administer all phases of the project.	Are the staffing and administrative capabilities to implement the action in place? Is there someone to coordinate and lead the effort?
<b>Political</b>	Political support for the mitigation action needs to be present.	Is the action politically acceptable? Have political leaders been involved in the planning process? Is there a political champion to help see the project to completion?
<b>Legal</b>	The legal authority to implement the actions need to be in place or possible with the passing of laws or regulations.	Does the legal authority to implement the proposed action exist? Are there potential legal repercussions?
<b>Economic</b>	The current budget (and/or general obligation bonds or other instruments) need to be in place to fully fund the mitigation action.	Do the potential benefits of this action exceed the potential costs? Has funding been secured for the proposed action? What are the potential funding sources (public, non-profit, and private)? How will this action affect the fiscal capability of the community(s)? Does the action contribute to other community goals, such as capital improvements or economic development?
<b>Environmental</b>	Actions should interface with the need for sustainable and environmentally healthy communities. Also, statutory considerations, such as the National Environmental Policy Act need to be considered for federal funds.	How will the action affect the environment? Will the action need environmental regulatory approvals? Will it meet federal, state, and local state regulatory requirements? Are endangered or threatened species likely to be affected?

Based on the prioritization review, the MPC assigned each action the following prioritized ranking:

- **High Priority:** Actions that provide substantial progress towards improving resiliency and are determined as potentially urgent in nature by the MPC. This would include actions that strongly support the reduction of high hazard risks and meet mitigation goals. Additionally, actions in this ranking may have imminent funding availability or strong community support.
- **Medium Priority:** Actions that provide reasonable progress towards improving resiliency and are determined as moderately urgent in nature by the MPC. This would include actions that would lessen impact hazard events, but not eliminate the impact completely.

- **Low Priority:** Actions that provide incremental progress towards improving resiliency and are determined as slightly urgent in nature by the MPC. This would include actions that are generally the responsibility of the local community, actions outside the normal authority of the State, or actions whose cost/benefit analysis returns a low yield.

## 6.5 Mitigation Action Funding Sources

It is generally recognized that mitigation actions help realize long term savings by preventing future losses due to hazard events. However, many mitigation actions are beyond the budgetary capabilities of a single jurisdiction. This section provides a general description of some of the avenues available to defray the cost of implementing mitigation actions.

FEMA provides financial assistance to state, local, tribal, and territorial governments, as well as certain private non-profit organizations, to implement projects that help reduce the risk and impact of future disasters. These grant programs are designed to support initiatives aimed at mitigating hazards and improving resilience. The main grant program offered by FEMA for hazard mitigation is the Hazard Mitigation Assistance (HMA) program. The HMA program includes four subprograms, the Hazard Mitigation Grant Program (HMGP), the HMGP Post-Fire, Building Resilient Infrastructure and Communities (BRIC), and the Flood Mitigation Assistance (FMA) grant program. Applicants to these grant programs are required to submit project proposals that demonstrate the effectiveness of their proposed mitigation projects. The eligibility criteria, application process, and specific requirements for each program are outlined by FEMA in their guidelines and announcements, which are typically published on FEMA's website.

The following provides a general overview of major grant funding streams:

- **HMGP and HMGP Fire:** The HMGP grants assist in implementing long-term hazard mitigation measures following Presidential disaster declarations, including fire declarations. Funding is available to implement projects in accordance with State, Tribal, and local priorities.
- **BRIC:** BRIC supports states, local communities, tribes and territories as they undertake hazard mitigation projects, reducing the risks they face from disasters and natural hazards. The BRIC program guiding principles are supporting communities through capability- and capacity-building; encouraging and enabling innovation; promoting partnerships; enabling large projects; maintaining flexibility; and providing consistency. Working in coordination with BRIC, the National Mitigation Investment Strategy is intended to provide a national, whole-community approach to investments in mitigation activities and risk management.
- **FMA Grant Program:** FMA is a competitive grant program that provides funding to states, local communities, federally recognized tribes and territories. Funds can be used for projects that reduce or eliminate the risk of repetitive flood damage to buildings insured by the NFIP. FEMA chooses recipients based on the applicant's ranking of the project and the eligibility and cost-effectiveness of the project. FEMA requires state, local, tribal and territorial governments to develop and adopt hazard mitigation plans as a condition for receiving certain types of non-emergency disaster assistance, including funding for hazard mitigation assistance projects.

The following table summarizes HMA grants programs:

Chart X: HMA Grant Program Summary

HMA Program Comparison	 HMGP	 HMGP Post Fire	 BRIC	 FMA
Program Type	Post-disaster	Post-disaster	Pre-disaster	Pre-disaster
Funding Availability	Presidentially declared disaster	FMAF-declared disaster	6% set aside from federal post-disaster grant funding	Annual appropriations
Competitive?	No	No	Yes	Yes
Eligible Applicants	States, federally recognized tribes, territories and the District of Columbia (DC)	States, federally recognized tribes, territories and DC	States, federally recognized tribes, territories and DC	States, federally recognized tribes, territories and DC
Eligible Subapplicants	State agencies, local governments, tribes and private nonprofit organizations	State agencies, local governments, tribes and private nonprofit organizations	State agencies, local governments and tribes	State agencies, local governments and tribes
Hazard Mitigation Plan Requirement	Yes	Yes	Yes	Yes
NFIP Participation	Communities with projects in Special Flood Hazard Areas (SFHAs)	Communities with projects in SFHAs	Communities with projects in SFHAs	Subapplicants and properties

Source: FEMA

Additionally, the following provide available grant funding avenues for hazard mitigation projects:

- **Rehabilitation Of High Hazard Potential Dam (HHPD) Grant Program:** HHPD awards provide technical, planning, design and construction assistance in the form of grants for rehabilitation of eligible high hazard potential dams. A state or territory with an enacted dam safety program, the State Administrative Agency, or an equivalent state agency, is eligible for the grant.
- **Emergency Management Performance Grant:** Program provides state, local, tribal and territorial emergency management agencies with the resources required for implementation of the National Preparedness System and works toward the National Preparedness Goal of a secure and resilient nation. Allowable costs support efforts to build and sustain core capabilities across the prevention, protection, mitigation, response and recovery mission areas.
- **State Homeland Security Program:** Program includes a suite of risk-based grants to assist state, local, tribal and territorial efforts in preventing, protecting against, mitigating, responding to and recovering from acts of terrorism and other threats. This grant provides grantees with the resources required for implementation of the National Preparedness System and working toward the National Preparedness Goal of a secure and resilient nation.
- **Nonprofit Security Grant Program:** Program is one of three grant programs that support DHS/FEMA's focus on enhancing the ability of state, local, tribal, and territorial governments, as well as nonprofits, to prevent, protect against, prepare for, and respond to terrorist or other extremist attacks. These grant programs are part of a comprehensive set of measures authorized by Congress and implemented by DHS to help strengthen the nation's communities against potential terrorist or other extremist attacks. Among the five basic homeland security missions noted in the DHS Strategic Plan for Fiscal Years 2020-2024

- **Public Assistance Program:** The mission of FEMA's Public Assistance program is to provide assistance to State, Tribal and local governments, and certain types of Private Nonprofit organizations so that communities can quickly respond to and recover from major disasters or emergencies declared by the President. Through the Public Assistance program, FEMA provides supplemental Federal disaster grant assistance for debris removal, emergency protective measures, and the repair, replacement, or restoration of disaster-damaged, publicly owned facilities and the facilities of certain private non-profit organizations. The Public Assistance Program also encourages protection of these damaged facilities from future events by providing assistance for hazard mitigation measures during the recovery process. The Federal share of assistance is not less than 75% of the eligible cost for emergency measures and permanent restoration. The grantee determines how the non-Federal share (up to 25%) is split with the eligible applicants.
- **Individual Assistance Program:** After a disaster, the federal government determines if any county in the state meets the criteria for individual disaster assistance. The decision is based on damage related to the severity and magnitude of the event. When a county receives an Individual Assistance declaration from the President of the United States, anyone who lives in that county can apply for assistance.
- **Small Business Administration Disaster Loans:** The Small Business Administration provides low-interest disaster loans to homeowners, renters, businesses of all sizes, and most private nonprofit organizations. Small Business Administration disaster loans can be used to repair or replace the following items damaged or destroyed in a declared disaster: real estate, personal property, machinery and equipment, and inventory and business assets.
- **The Housing and Urban Development Agency:** Provides flexible grants to help cities, counties, and States recover from Presidentially declared disasters, especially in low-income areas, subject to availability of supplemental appropriations.
- **Community Development Block Grant Program:** This is a flexible program that provides communities with resources to address a wide range of unique community development needs. The program provides annual grants on a formula basis to general units of local government and States.
- **Individual and Households, Other Needs Assistance Program:** This program provides financial assistance to individuals or households who sustain damage or develop serious needs because of a natural or man-made disaster. The funding share is 75% federal funds and 25% state funds. The program provides grants for necessary expenses and serious needs that cannot be provided for by insurance, another federal program, or other source of assistance. The current maximum allowable amount for any one disaster to individuals or families is \$25,000. The program gives funds for disaster-related necessary expenses and serious needs, including personal property, transportation, medical and dental, funeral, essential tools, flood insurance, and moving and storage.
- **WUI Grants:** The 10-Year Comprehensive Strategy focuses on assisting people and communities in the WUI to moderate the threat of catastrophic fire through the four broad goals of improving prevention and suppression, reducing hazardous fuels, restoring fire-adapted ecosystems, and promoting community assistance. The WUI Grant may be used to apply for financial assistance towards hazardous fuels and educational projects within the four goals of: improved prevention, reduction of hazardous fuels, restoration of fire-adapted ecosystems and promotion of community assistance.
- **Bureau of Indian Affairs Aid to Tribal Governments:** This program provides funds to Indian Tribal governments to support general Tribal government operations, to maintain up-to-date Tribal enrollment, to conduct Tribal elections, and to develop appropriate Tribal policies, legislation, and regulations. Funds may be used in a variety of ways to strengthen the capabilities of Indian tribes in self-government, community planning, and maintenance of membership records.
- **Bureau of Indian Affairs Replacement and Repair of Indian Schools:** Providing safe, functional, code-compliant, economical, and energy efficient education facilities for American Indian students attending Bureau of Indian Affairs owned or funded primary and secondary schools or residing in Bureau owned or funded dormitories.
- **Bureau of Indian Affairs Wildland Fire Management:** Cooperative agreements for grants and reimbursable costs related to wildland fire management directly associated with programs contracted by tribes under the authority of the National Indian Forest Resources Management Act.

Small and impoverished communities that receive grants may receive a federal cost share of up to 90% of the total amount approved under the grant award. As defined in 44 CFR 201.2, a small and impoverished community is:

- A community of 3,000 or fewer individuals that is identified by the State as a rural community
- Is not a remote area within the corporate boundaries of a larger city
- Is economically disadvantaged, by having an average per capita annual income of residents not exceeding 80% of national, per capita income
- The local unemployment rate exceeds by one percentage point or more, the most recently reported, average yearly national unemployment rate
- Any other factors identified in the State Plan in which the community is located

## **6.6 Jurisdictional Mitigation Actions**

To support the mitigation goals identified in this HMP, all participating Kansas Region G jurisdictions identified a comprehensive range mitigation projects and activities. The selected set carefully takes an all-hazards approach to mitigation while simultaneously addressing each of the plan's profiled hazards. The list of mitigation actions is based upon the potential to reduce risk to life and property with an emphasis on ease of implementation, community and agency support, consistency with local jurisdictions' plans and capabilities, available funding, and jurisdictional vulnerability. This plan update includes carryover mitigation actions from the 2019 HMP as they are still relevant and/or in progress or ongoing. It also includes projects that have been carried over due to a lack of funding and/or resources required for project completion during the last five-year cycle.

A detailed list of each participating jurisdiction's hazard mitigation actions may be found in Appendix D.

Prior to the implementation of any action further feasibility analysis will be performed. Additionally, a Benefit-Cost Analysis that determines the future risk reduction benefits of a hazard mitigation project and compares those benefits to its costs will be conducted as required. Applicants and sub-applicants will use FEMA approved methodologies and tools, such as the Benefit-Cost Analysis Toolkit, to demonstrate the cost-effectiveness of their projects. The result of the analysis is a Benefit-Cost Ratio, and a project is considered cost-effective when the Benefit-Cost Ratio is 1.0 or greater. Depending on the project, either a full Benefit-Cost Analysis will be completed by entering documented values into the FEMA Benefit-Cost Analysis Toolkit, which calculates a benefit-cost ratio or, if the project meets specified criteria, a streamlined Benefit-Cost Analysis may be completed (FEMA's cost-effectiveness requirement is never waived).

## **6.7 Completed Mitigation Actions**

Kansas Region G and its participating jurisdictions remain committed to investigating and obtaining all available grant funding for the completion of hazard mitigation projects. Since the completion of the previous HMP, the MPC has been tracking the completion status of all identified hazard mitigation actions. The onset of COVID-19 early in the life of the 2019 HMP necessitated all available resources, funding, and capabilities to be reassigned to help manage the pandemic. Additionally, staff shortages and non-standard working arrangements were instituted for all agencies. As such, the Kansas Region G and its participating jurisdictions only managed to complete a sub-set of previously identified mitigation action items since the completion of the last HMP. Completed action are marked as such in the detailed list jurisdictional mitigation actions found in Appendix D.:

## **6.8 Mitigation Action Implementation and Monitoring**

Kansas Region G participating jurisdictions are responsible for implementing their identified mitigation actions. To foster accountability and increase the likelihood that actions will be implemented, every proposed action is assigned to a specific department or position as a champion. In general:

- The identified champion will be responsible for tracking and reporting on action status.
- The identified champion should provide input on whether the action as implemented is successful in reducing vulnerability, if applicable.

- If the action is unsuccessful in reducing vulnerability, the identified champion will be tasked with identifying deficiencies and additional required actions.

Additionally, each action has been assigned a proposed completion timeframe to determine if the action is being implemented according to plan.

In general, the Kansas Region G HMP is responsible for monitoring the progress of mitigation activities and projects throughout the county in conjunction with participating jurisdictions. To facilitate the tracking of any awarded hazard mitigation grants, the Kansas Region G MPC, in conjunction with participating jurisdictions, will compile a list of projects funded throughout the calendar year, if any, and add it to an electronic database administered by KDEM. Additionally, the Kansas Region G MPC will monitor information on any other mitigation projects that were not funded through hazard mitigation grants.

To track mitigation projects from initiation to closeout, participating jurisdictions will use a project tracking spreadsheet that includes, at a minimum, the following information:

- Applicant/Subrecipient
- Grant Identifier
- Contractor
- Total Cost Estimate
- Federal/Local share
- Award Date
- Period of Performance
- Quarterly Reports
- Subrecipient Risk
- Reimbursements

Upon completion of a project, a member of the awarded jurisdiction, a member of the Kansas Region G MPC, and a State of Kansas representative will conduct a closeout site visit to:

- Review all files and documents
- Review all procurement files and contracts to third parties
- Take photos of the completed project

Project closeout packages will generally be submitted 90 days after a project has been completed, and will include the following:

- Summary of documentation
- Pictures of completed project
- Materials, labor, and equipment forms, if required
- Close-out certification

## **6.9 Hazard Mitigation Plan Incorporation and Integration**

The hazard mitigation plan is an overarching document that is both comprised of, and contributes to, various county, tribal, and local plans. Unfortunately, previous versions of the Kansas Region G HMP have not been incorporated into jurisdictional planning efforts. Under the leadership of the MPC, it is hoped that when future revisions occur to these other plans, they will be measured against the contents of this HMP. Plan integration will help:

- Align community goals, objectives, and prime concerns
- Avoid lost opportunities
- Eliminate duplication of effort

In cooperation with the MPC, each participating jurisdiction will be actively courted on incorporating elements of this hazard mitigation plan for any relevant plan, code or ordinance revision or creation. Each participating jurisdiction has committed to actively encourage all departments to implement actions that minimize loss of life and property damage from hazards. Whenever possible, each participating jurisdiction will use existing plans, policies, procedures, and programs to aid in the implementation of identified hazard mitigation actions.

On a local level, hazard mitigation plans can be integrated into various planning documents and initiatives to ensure a comprehensive and coordinated approach to reducing the impact of hazards. Local level plans where hazard mitigation strategies can be integrated include:

- **Comprehensive Plans:** Helps guide long term community development o ensure future resilience against identified hazards.
- **Threat and Hazard Identification and Risk Assessment:** Utilizes information from the HMP to understand the specific threats and hazards that may impact the community. This informs the development of strategies and resource allocation for emergency management capabilities, ensuring that the community is well-prepared to respond effectively.
- **Comprehensive Land-Use Plans:** Helps guide the development and zoning decisions in a way that minimizes vulnerability to hazards. This includes avoiding construction in high-risk areas and encouraging resilient building practices.
- **Emergency Operations Plans:** Contributes to detailing specific actions to be taken before, during, and after disasters to reduce vulnerability and enhance community resilience.
- **Climate Action Plans:** Can help address both short-term hazards and long-term climate-related risks. This includes considerations for extreme temperatures and changes in precipitation patterns.
- **Transportation Plans:** Helps ensure the resilience of transportation infrastructure to hazards such as floods, and earthquakes. This may involve designing infrastructure to withstand extreme weather events.
- **Infrastructure Master Plans:** Contributes to the design, construction, and maintenance of critical infrastructure, such as water supply systems, roads, bridges, and utility networks.
- **Community Development Plans:** Helps ensure that new development projects align with hazard resilience goals. This may involve establishing building codes that prioritize hazard-resistant construction.
- **Open Space and Recreation Plans:** Provides for the consideration of green infrastructure and open spaces for flood control, wildfire buffers, and other hazard mitigation purposes.
- **School Emergency Plans:** Enhances the safety and resilience of educational facilities. This may involve retrofitting buildings, establishing evacuation routes, and conducting regular drills.
- **Public Health Preparedness Plans:** Addresses potential health risks associated with hazards. This includes planning for medical surge capacity, disease prevention, and healthcare facility resilience.

Integration of hazard mitigation into these various plans ensures that resilience efforts are embedded in the broader fabric of community development. Coordination and collaboration among different sectors and stakeholders are essential for the successful implementation of hazard mitigation strategies on the local level. Plan incorporation and integration is crucial for creating a cohesive and coordinated approach to address various aspects of hazard mitigation. All stakeholders and participating jurisdictions utilize similar internal procedures for plan incorporation and integration. The following represent commonly utilized methods by all participating jurisdictions:

- **Cross-Referencing:** Identify and cross-reference relevant sections of different plans and policies. This involves explicitly noting connections between the goals, strategies, and actions outlined in one plan with those in others.
- **Consistency Checks:** Conduct consistency checks to ensure that the language, objectives, and strategies in different plans and policies align with each other.

- **Joint Planning Committees:** Establish joint planning committees or task forces that involve representatives from different departments or agencies responsible for various plans (for example, the MPC). These committees facilitate communication, collaboration, and the coordination of planning efforts across sectors.
- **Collaborative Workshops and Meetings:** Organize collaborative workshops and meetings to bring together stakeholders involved in different planning processes (as seen in the planning meetings for the HMP). These forums provide an opportunity for stakeholders to share information and discuss common goals.
- **Alignment with State and Regional Plans:** Ensure that local plans align with broader regional and state plans. This involves considering regional and state priorities and incorporating them into local planning efforts to create a harmonized approach to development.
- **Data Sharing and Analysis:** Share relevant data among planning efforts and conduct joint data analysis. This helps in creating a common understanding of the challenges and opportunities, facilitating evidence-based decision-making across different plans.
- **Unified Implementation Strategies:** This involves identifying common actions and initiatives that contribute to the achievement of multiple goals outlined in various plans.

All participating jurisdictions within Kansas Region G have good working relationships with both each other, the State of Kansas, and FEMA indicating great potential for plan incorporation and integration across the planning area. Where appropriate, The Kansas Region G MPC will take the lead in integrating this HMP into overarching plans, codes, ordinances and any other relevant documents, policies, or procedures.

## Section 7 – Plan Maintenance

### 7.1 Introduction

The HMP is a living document that will be updated and submitted to FEMA for approval every five years as required by 44 CRF 201.4. During the five-year cycle, the plan will undergo continuous monitoring and evaluation to ensure that the policies, procedures, priorities, and state environment established in the plan reflect current conditions. Kansas Region G will utilize the MPC to provide plan updates, revisions, and data collection for future HMP planning purposes.

### 7.2 Plan Maintenance Responsibilities

KDEM serves as the lead coordinating agency for plan maintenance. Additional assistance in the plan maintenance process is provided by members of the MPC, subject matter experts, and representatives of local jurisdictions.

KDEM and the MPC will facilitate the review and revision of the HMP every five years. The review and revision will be an ongoing process. This process will incorporate all of the revisions made during the life of the plan, especially new data obtained from participating jurisdictions.

### 7.3 Plan Review Meetings

As part the Local Emergency Planning Committee (LEPC), a Mitigation Sub-Committee will be formed from members of the MPC. The LEPC Mitigation Sub-Committee will meet annually for the first two years after plan approval. Kansas Region G L EPC Mitigation Sub-Committee members will determine the meeting dates and locations and will ensure that the meetings are open to all participating jurisdictions and the public. The elected LEPC Mitigation Sub-Committee Chair will be the main point of contact for these meetings and will maintain attendance and meeting minutes.

The purpose of these meetings is to discuss agency capability changes, the status of proposed projects, and any new studies or mapping that may inform the HMP. Should a specific plan element or section require revision or amendment due to a state or federal legislation or policy change, the LEPC Mitigation Sub-Committee will work with the KDEM SHMO to complete a plan addendum and submit it to FEMA as quickly as is practicable.

During these meetings, and in order to monitor HMP progress, the following information will be tracked by the LEPC Mitigation Sub-Committee:

- How the actions from the mitigation strategy are being pursued and completed
  - Are actions being prioritized
- How the plan goals and objectives are being carried out
- How mitigation funding mechanisms are being utilized
- How local jurisdictions are receiving technical assistance

Additionally, the LEPC Mitigation Sub-Committee will monitor the following elements to ensure the HMP is current and correct:

- Reviewing the hazards and determining if any of them have changed
- Determining if there are new hazards that pose a risk to the state
- Ensuring goals and objectives are still relevant
- Determining if any actions have been completed or are deemed irrelevant
- Determining if new actions should be added
- Determining if capabilities have changed

After each meeting, the LEPC Mitigation Sub-Committee will compile a meeting report for usage in future plan revisions.

In addition to these meetings, MPC members and local jurisdictional representatives will monitor and evaluate the progress of mitigation projects via quarterly reports, site visits, correspondence, and reimbursements. Completed projects will be evaluated for loss avoidance and alignment with local development plans.

KDEM may request a non-scheduled report on the monitoring, evaluation, or updating of any portion of the HMP plan due to irregular progress on mitigation actions and or projects, in the aftermath of a hazard event, or for any reason deemed appropriate.

#### **7.4 Plan Monitoring and Situational Change**

Plan monitoring can be defined as the ongoing process by which stakeholders obtain regular feedback on the progress being made towards achieving their goals and objectives. In the more limited approach, monitoring may focus on tracking projects and the use of the agency's resources. In the broader approach, monitoring also involves tracking strategies and actions being taken by partners and non-partners, and figuring out what new strategies and actions need to be taken to ensure progress towards the most important results.

The full MPC or the LEPC Mitigation Sub-Committee will track and record all substantial situational changes and will address, as appropriate, the following questions:

- Is the mitigation project under, over, or on budget?
- Is the mitigation project behind, ahead of, or on schedule?
- Are there any changes in jurisdictional capabilities which impact the plan?
- Are there any changes in jurisdictional hazard risk?
- Has the mitigation action been initiated, or its initiation planned?
- Is the current process of prioritizing mitigation actions and projects appropriate and accurate?
- Has the current method of incorporating mitigation actions and projects yielded a comprehensive action and project strategy to address seen and unforeseen hazards?
- If applicable, has participation in a mitigation action's collaboration been regular?
- Was a negative result caused directly or indirectly by insufficient levels of public outreach?
- If any, what plan updates occurred, why they occurred, and what is their impact?

#### **7.5 Post-Disaster Review**

After each Presidential disaster declaration, and in coordination with FEMA, KDEM and the full MPC will convene to document impacts on Kansas Region G and to determine if any mitigation actions should be considered to reduce future risk. This will allow for the development of hazard mitigation recommendations to FEMA during the disaster operation as well as to update the mitigation strategy as needed. The post-disaster review may coincide with established meetings or may be convened as separate events.

#### **7.6 Plan Evaluation**

A plan evaluation is a rigorous and independent assessment of either completed or ongoing activities to determine the extent to which they are achieving stated goals and contributing to decision making.

A plan evaluation report will be completed by either the full MPC or the LEPC Mitigation Sub-Committee when the situation dictates. The following situations are typical examples of when an evaluation will be necessary.

- Post hazard event
- Post training exercise
- Post tabletop or drill exercise
- Significant change or completion of a mitigation project
- Significant change or completion of a mitigation action

An evaluation report will ask the following questions in response to the previously listed events.

- Do the mitigation objectives and goals continue to address the current hazards?
- Are there new or previously unforeseen hazards?
- Does a change in hazard vulnerability demand a change of or addition of mitigation actions or projects?
- Does a change in the mitigation strategy demand a change of or addition of mitigation actions or projects?
- Are current resources appropriate for implementing a mitigation project?
- Was the outcome of a mitigation action/project expected?
- Are there implementation problems?
- Was the public engaged to the point where they were satisfied with current engagement strategies?
- Did the public participate in a number that produced a positive yield on the plan, action, or project?
- Are there coordination problems?

## 7.7 Plan Updates

Typically, the updating of a HMP is initiated upon the completion of a plan evaluation when the evaluation determines an update is appropriate. A plan update also occurs every five years per FEMA guidelines or at any time it is deemed necessary by MPC members or KDEM.

According to FEMA DMA 2000 guidelines for mitigation planning, Kansas Region G will begin the update process three years from this plan's adoption under the direction of the LEPC Mitigation Sub-Committee. An increase in meeting tempo to twice yearly will allow the LEPC Mitigation Sub-Committee to gather relevant information needed for the next plan update. The following meeting schedule indicates the tasks to be performed during this plan update period:

- **2026 Fall Meeting:** The LEPC Mitigation Sub-Committee will begin updating the risk assessment portion of the plan. Hazards will be analyzed to determine if they are still relevant, if location should be updated, and if new hazards should be added. Previous occurrences will be reviewed to help determine the probability of future events.
- **2027 Spring Meeting:** The LEPC Mitigation Sub-Committee will begin updating the vulnerability assessment. The MPC will update the vulnerability assessment portion of the plan. Data will need to be gathered for assets, critical facilities, building stock values, jurisdictional damages, etc.
- **2027 Fall Meeting:** The LEPC Mitigation Sub-Committee will review information received and determine if the goals and objectives are still relevant and if new ones should be added. Actions will be reviewed to determine if they should remain in the plan, have been completed, or are no longer relevant. The LEPC Mitigation Sub-Committee will review the potential funding sources for each action.
- **2028 Spring Meeting:** As appropriate, a new MPC for Kansas Region G will be formed, and all participating jurisdictions will be convened, to take over the planning process. The new MPC and all participating jurisdictions will evaluate the policies, programs, capabilities, and funding sources from the previous plan to determine if they are still accurate and if any new items should be added.
- **2028 Fall Meeting:** The new MPC and all participating jurisdictions will review the draft copy of the mitigation plan and make comments and updates if necessary. Formal submittal to FEMA for re-approval will follow.

In general, the following steps will be taken to complete the next HMP revision:

**Table X: Kansas Region G HMP Update Task List**

Task	Action
1	Evaluate and update the planning process.
2	Review the stakeholder contact list and identify new stakeholders.
3	Initiate plan outreach and discussion, including a stakeholder meeting.
4	Consider the addition, removal, or modification of hazards identified in the plan.
5	Update and revise membership of the MPC.

**Table X: Kansas Region G HMP Update Task List**

<b>Task</b>	<b>Action</b>
6	Evaluate risk assessment methodologies and data sources.
7	Evaluate and update critical facility inventory information.
8	Evaluate and update the hazard profiles.
9	Evaluate and update the risk assessment summary.
10	Evaluate and update the mitigation strategy, including proposed mitigation actions.
11	Evaluate and update the mitigation implementation system.
12	Integrate new and updated local plans.
13	Evaluate and update other plans sections.
14	Identify and add any additional sections or information needed.
15	Review updated plan in its entirety.
16	Conduct updated plan outreach, including public information, comment period, and meetings.
17	Integrate additional comments received.
18	Finalize plan document.
19	Complete crosswalk and submit final plan to FEMA for review and approval.
20	Make additional modifications as required.
21	Obtain jurisdictional adoption resolutions.

### **7.8 Continued Public Involvement**

Kansas Region G and all participating jurisdictions are dedicated to involving the public in the continual shaping of the HMP and in the development of its mitigation projects and activities.

The Kansas Region G MPC, the LEPC Mitigation Sub-Committee, and all participating jurisdictions will continue to keep the public informed about hazard mitigation projects and activities through jurisdictional websites, and as appropriate, public announcements. The public will also be invited to participate in all meetings to review and discuss the mitigation-related events. Additionally, participating jurisdictions will present to public officials in a public forum concerning the progress of mitigation actions identified in this plan as progress is made.

Copies of the Kansas Region G HMP will be distributed to all the participating jurisdictions and made available to the public. Methods of public availability may include electronically posted on a website or a hard copy kept at a jurisdictional office.

**Table X: Butler County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Butler County 1	Install generators in county facilities.	All hazards	Butler County Facilities Department	High	1, 3	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Butler County 2	Purchase electronic mobile traffic notification signs.	All Hazards	Butler County Emergency Management, Butler County Public Works	Medium	1, 2	\$35,000	HMGP, Local budgets	Five years	New
Butler County 3	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	Butler County Public Works	High	1, 2	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
Butler County 4	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	Butler Co Extension	High	1, 3	Staff Time	Local budgets	Five years	New
Butler County 5	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	Butler Co Extension	High	1, 2	Staff Time and \$500	Local budgets	Five years	New
Butler County 6	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	Butler County Facilities Department	Low	1, 2	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Butler County 7	Develop and recommend building code updates on all jurisdictional facilities.	Severe Storms, Tornado, Earthquake	Butler Co Community Development	Low	1, 2	Staff time	Local budgets	Continuous	On-going
Butler County 8	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	Butler County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Butler County 9	Conduct a flood insurance awareness program.	Flooding	Butler Co Flood Plain Administrator	High	1, 3	Staff Time	Local budgets	Five years	New

**Table X: Butler County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Butler County 10	Educate residents about the dangers of floods and flood prevention.	Flooding	Butler Co Flood Plain Administrator	Medium	3	\$1000	Local, state, federal	Continuous	On-going
Butler County 11	Develop and recommend amendments to the existing Flood Damage Protection Resolution to adopt higher regulatory standards.	Flooding	Butler Co Flood Plain Administrator	Medium	1, 2	Staff time	Local, state, federal	Continuous	On-going
Butler County 12	Commit to continued participation and compliance with the NFIP	Flooding	Butler Co Flood Plain Administrator	Medium	1, 2	Staff time	Local, state, federal	Continuous	On-going
Butler County 13	Research, design and recommend an appropriate stream buffer ordinance to further protect the jurisdiction's water resources and to limit future flood damages adjacent to major water ways.	Flooding	Butler Co Flood Plain Administrator	Medium	1, 2	Staff time	Local, state, federal	Pending funding	On-going
Butler County 14	Perform drainage improvements at designated locations by upgrading culverts.	Flooding	Butler County Public Works	Medium	1,2	\$150 – 175,000 per location	HMGP, FMA, local budgets	Five years	Pending funding
Butler County 15	Procure permanent signage to warn of flood hazard areas.	Flooding	Butler Co Flood Plain Administrator	Medium	1, 2	Location dependent	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Butler County 16	Install surge protectors in all jurisdictional facilities.	Severe Thunderstorms	Butler County Facilities Department	Medium	1, 2	\$10,000 per location	HMGP, BRIC, Local budgets	Five years	New

**Table X: Butler County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Butler County 17	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Butler County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Butler County 18	Insulate water lines in all jurisdictional facilities.	Winter Storm	Butler County Building Department	Low	1, 2	\$10,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Butler County 19	Upgrade cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Butler County IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Butler County 20	Provide hazardous materials response training to first responders and emergency management staff.	Hazardous Materials Event	Butler County LEPC	High	1, 2	\$500 per trainee	HMGP, HMEP, Local budgets	As required	New
Butler County 21	Identify and map all structurally deficient bridges.	Infrastructure Failure	Butler County Public Works	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Butler County 22	Conduct active shooter drills and exercises for all county personnel.	Terrorism	Butler County Sheriff's Office	Low	1, 2	Data size dependent	Local budgets	Five years	New
Butler County 23	Purchase and install new epidemiological tracking software.	Transmissible Disease	Butler County Health Department	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Butler County 24	Upgrade and enhance county's sirens	All hazards	Butler County Emergency Management	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of funding
Butler County 25	Construct community safe rooms where needed to required building standards	Severe Storms, Tornado	Butler County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding

**Table X: Andover Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Andover 1	Purchase and install critical facility backup generators.	All hazards	Andover Administration	High	1, 2	\$250,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Andover 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Andover Administration	High	1, 2	\$55,000 annually	HMGP, Local budgets	As required	New
Andover 3	Continue to promote awareness and compliance with the City's design manual and regulations for post-construction stormwater management required for development or redevelopment of sites larger than one acre.	All hazards	Stormwater Operator	Medium	2,3	\$25,000	HMGP, BRIC, Storm water fees	As grant funding comes available	On-going
Andover 4	Require the successful completion of NIMS training for selected employees in all departments.	All Hazards	Emergency Management Director, Human Resource Director	High	1,2,4	\$20,000	Local budgets	As grant funding comes available	Carried over due to lack of funding
Andover 5	Acquire a bank of portable radios, chargers, and spare batteries for use in hazardous situations by volunteers	All hazards	Police Chief, Communications Director	High	1,2,4	\$80,000	HMGP, Local budgets	As grant funding comes available	Carried over due to lack of funding
Andover 6	Acquire mobile surveillance and deterrence towers.	All hazards	Police Chief, Communications Director	Low	1,2	\$100,000	HMGP, Local budgets	As grant funding comes available	Carried over due to lack of funding
Andover 7	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Andover Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding

**Table X: Andover Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Andover 8	Conduct a personal water use education program.	Drought	Andover Public Works	Low	3	Staff time & \$3,000	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Andover 9	Develop and construct agreements for secondary water sources that may be used during drought conditions.	Drought	Director of Public Works, City Engineer	High	1,2,4	\$15,000,000	HMGP, State, Local budgets	As grant funding comes available	Carried over due to lack of funding
Andover 10	Continue to meet requirements of the NFIP.	Flood	Andover NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going
Andover 11	Construct rainwater retention/detention ponds at strategic locations.	Flood	Andover Stormwater Utility	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Andover 12	Clean and repair drainage ditches to maintain capacity.	Flood	Andover Public Works	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Andover 13	Continue to encourage 100% compliance with flood management and building codes.	Flood	Director of Public Works, Building Official, City Engineer	Medium	1,2	\$20,000	Local budgets	Continuous	On-going
Andover 14	Identify and evaluate areas in need of storm drainage improvements inside city limits	Flood	Director of Public Works, City Engineer	Medium	1,2	\$30,000	HMGP, State, Local budgets	Continuous	Carried over due to lack of funding
Andover 15	Enhance/build drainage culverts, clean, deepen ditches, and enhance sewer drainage. Develop and construct agreements for secondary water sources that may be used during drought conditions.	Flood	Director of Public Works, City Engineer, Stormwater Operator	Medium	1,2	\$500,000	HMGP, State, Local budgets	As grant funding comes available	Carried over due to lack of funding

**Table X: Andover Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Andover 16	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Andover Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Andover 17	Identify and pursue incentives for contractors to include safe room construction in new residential, commercial, and public buildings.	Severe Thunderstorm, Tornado	Building Official	Medium	1,2	\$500,000	HMGP, State, Local budgets	Continuous	On-going
Andover 18	Continue to require all new construction to utilize underground utilities, and pursue opportunities for the burying of existing aerial utility lines.	Severe Thunderstorm, Tornado, Utility Failure	Director of Public Works, Director of Community Development	High	1,2	\$15,000,000	HMGP, State, Local budgets	Continuous	Carried over due to lack of funding
Andover 19	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Andover Public Works	Low	1, 2	\$100,000 per location	Facility size dependent	Five years	New
Andover 20	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Andover Police	Low	4	Staff Time	Local budgets	Five years	New
Andover 21	Build additional 24-hour accessible storm shelter in 13th Steet Park.	Tornado	Director of Public Works	Medium	1,2	\$1,000,000	HMGP, State funding	As grant funding comes available	Carried over due to lack of funding
Andover 22	Implement WUI trainings to increase the general, tactical, and safety knowledge of anyone living in, or responding to, fires in the WUI.	Wildfire	Fire Chief, Kansas Forest Service	Medium	1, 2, 3	\$50 per student per training	Kansas Forest Service, State, Federal	On-going	Carried over due to lack of funding

**Table X: Andover Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Andover 23	Identify and prioritize locations for fuel reduction in wildfire risk areas and invasive new growth cedar plots.	Wildfire	Fire Chief, Kansas Forest Service, Board of Trustees, County and City Public Works	Medium	1, 2	\$5,000	Kansas Forest Service, Federal WUI grants	On-going	Carried over due to lack of funding
Andover 24	Brush and vegetation mitigation on and adjacent to the Red Bud Trail, A Rails to Trails project	Wildfire	Fire Chief, Kansas Forest Service, Board of Trustees, County and City Public Works	Medium	1,2,3	\$100 an acre for hazardous	Kansas Forest Service, Federal WUI grants., Americor potential project	Continuous	Carried over due to lack of funding
Andover 25	Identify, record, and communicate remote static water supply access points in all fire districts	Wildfire	Fire Chief, Kansas Forest Service, Board of Trustees, County and City Public Works	Medium	1,2	\$750-\$1,000 per site	Kansas Forest Service, Federal WUI grants. Private land owners, private insurance	Continuous	Carried over due to lack of funding
Andover 26	Develop improvements in vehicle access and water accessibility (dry hydrants, fixed / portable pumps	Wildfire	Fire Chief, Kansas Forest Service, Board of Trustees, County and City Public Works, BCEM, and BC911	Medium	1,2	\$1,500 - \$10,000 per site	Kansas Forest Service, Federal WUI grants. Private land owners, private insurance	Continuous	Carried over due to lack of funding

**Table X: Andover Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Andover 27	Identify and pursue incentives for contractors to include sprinklers in new residential, commercial, and public buildings.	Wildfire	Fire Chief	Medium	1,2	\$500,000	HMGP, BRIC	As grant funding comes available	Carried over due to lack of funding
Andover 28	Create a community wildfire protection plan	Wildfire	Andover Fire Chief & Emergency Medical Director	High	1,2,3,4	\$50,000	HMGP, Local budgets & BRIC	Three years	New
Andover 29	Educational workshops for homeowners' associations and/or rural communities to provide homeowners with property in the wildland urban interface and New Growth Cedar forest information on steps they can take to defend their property from wildfire. Firewise program adapted to local fuel conditions and topography and Ready Set Go as examples	Wildfire	Fire Chief, Kansas Forest Service	Medium	1, 2, 3	\$1,000 per workshop	Kansas Forest Service and Federal Grants, Local insurance company support	On-going	Beginning in 1st QTR 2024
Andover 30	Reduce hazardous fuels in prioritized wildfire risk areas and invasive new growth cedar plots.	Wildfire	Fire Chief, Kansas Forest	Medium	1,2	\$100 an acre for hazardous	Kansas Forest	On-going	Carried over due to lack of funding

**Table X: Augusta Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Augusta-1	Continue to identify critical areas with limited access due to flooding (NFIP)	Flood	City Engineer	Medium	1,2,3	\$5,000	Local	2020	On-Going
Augusta-2	Create a Stormwater Master Drainage Plan (NFIP)	Flood	City Manager	High		\$250,000	Local, HMGP	2023-2024	GIS work complete
Augusta-3	Encourage 100% compliance with flood management and building codes (NFIP)	Flood	City Inspector	Medium	1,2	Staff Time	None	Repeating	In progress
Augusta-4	Identify and pursue funding for tree trimming	Severe Thunderstorm, Tornado, Infrastructure Failure	City Manager	Medium	2,3	\$50,000 Annually	HMGP, Local, State, Private	Ongoing	In progress
Augusta-5	Pursue funding and potential locations, and construct tornado shelters/ safe rooms	Tornado	City Manager	High	2	\$500,000	HMGP, Local, State	Ongoing	Ongoing
Augusta-6	Upgrade power line infrastructure standards and existing power lines to withstand high winds and ice loading; Replace existing 4,160 Volt System	Severe Thunderstorm, Tornado, Infrastructure Failure	Director of Public Utilities	High	3	\$15,000,000	HMGP, Local, State	Ongoing	Ongoing
Augusta-7	Bury power lines for new construction	Severe Thunderstorm, Tornado, Infrastructure Failure	Director of Public Utilities	High	3	Per Site Basis	HMGP, Local, State	Ongoing	Ongoing

**Table X: Augusta Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Augusta-8	Rehabilitation of Electric Plant Cooling Towers	Infrastructure Failure; Severe Winter Storm	Director of Public Utilities	High	1,2	\$400,000	Local, HMGP	2023	In Progress
Augusta-9	South Pump Station Discharge Repairs	Infrastructure Failure, Flood	City Manager	High	1,2	\$400,000	Local, HMGP	2024-2025	Not started
Augusta-10	City Lake Spillway Weir and Drainage Channel Repairs	Infrastructure Failure, Flood	City Manager	Medium	1	\$500,000	Local, HMGP	2024	Not Started
Augusta-11	Industrial Park Stormwater Discharge Channel	Infrastructure Failure, Flood	City Manager	High	1	\$500,000	Local, HMGP	2023-2024	Not Started
Augusta-12	HWY 54/400 Stormwater Culvert Replacement	Infrastructure Failure, Flood	City Manager	High	1,2	\$3,500,000	Local, HMGP	2024-2025	Not Started
Augusta-13	Replace Storm Sirens	Tornado	City Manager	Medium	1,3,4	\$125,000	Local, HMGP	2024	Not Started
Augusta-14	Decommissioning of Electric Plant 1	Infrastructure Failure, Flood	Director of Public Utilities	Medium	1	TBD	Local	2026	Not Started
Augusta-15	Implement Stormwater Utility	Infrastructure Failure, Flood	Director of Public Utilities / City Manager	Medium	1,2,3	Staff Time	Local	2024-2025	In Progress
Augusta-10	City Lake Spillway Weir and Drainage Channel Repairs	Infrastructure Failure, Flood	City Manager	Medium	1	\$500,000	Local, HMGP	2024	Not Started
Augusta-11	Industrial Park Stormwater Discharge Channel	Infrastructure Failure, Flood	City Manager	High	1	\$500,000	Local, HMGP	2023-2024	Not Started
Augusta-12	HWY 54/400 Stormwater Culvert Replacement	Infrastructure Failure, Flood	City Manager	High	1,2	\$3,500,000	Local, HMGP	2024-2025	Not Started

**Table X: Benton Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Benton 1	Purchase and install critical facility backup generators.	All hazards	Benton Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Completed
Benton 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Benton Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	Completed
Benton 3	Institute a tree trimming program near utility lines.	All hazards	Benton Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	In place annual assignment
<del>Benton 4</del>	<del>Install evacuation route and high ground signage in any high hazard dam potential inundation areas.</del>	<del>Dam/Levee Failure</del>	<del>Benton Administration</del>	<del>Low</del>	<del>1, 2, 4</del>	<del>\$5,000 per location</del>	<del>HMGP, Local budgets</del>	<del>Five years</del>	Not sure this is applicable due to our topography
Benton 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Benton Facilities Department	Low	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of interest
Benton 6	Conduct a personal water use education program.	Drought	Benton Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Annual dissemination of information
Benton 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Benton Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Is this a government function?
Benton 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Benton Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	In place with maintained facility
Benton 9	Continue to participate meet requirements of the NFIP.	Flood	Benton NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Benton Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Benton 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Benton Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Completed in 2022/2023
Benton 11	Clean and repair drainage ditches to maintain capacity.	Flood	Benton Administration	Medium	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Continuous
Benton 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Benton Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	Completed. All roofing is currently metal
Benton 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Benton Administration	Low	4	Staff Time	Local budgets	Five years	New
Benton 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Benton Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Community saferooms established 2023
Benton 15	Create defensible space buffers at all critical facilities	Wildfire	Benton Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Benton 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Benton IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	Completed 2022
Benton 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Benton Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Cassoday Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Cassoday 1	Purchase and install critical facility backup generators.	All hazards	Cassoday Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Cassoday 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Cassoday Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Cassoday 3	Institute a tree trimming program near utility lines.	All hazards	Cassoday Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Cassoday 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Cassoday Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Cassoday 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Cassoday Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Cassoday 6	Conduct a personal water use education program.	Drought	Cassoday Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Cassoday 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Cassoday Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Cassoday 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Cassoday Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Cassoday 9	Continue to participate meet requirements of the NFIP.	Flood	Cassoday NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Cassoday Mitigation Actions**

Elbing 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Elbing Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Elbing 11	Clean and repair drainage ditches to maintain capacity.	Flood	Elbing Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Elbing 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Elbing Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Elbing 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Elbing Administration	Low	4	Staff Time	Local budgets	Five years	New
Elbing 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Elbing Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Elbing 15	Create defensible space buffers at all critical facilities	Wildfire	Elbing Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Elbing 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Elbing IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Elbing 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Elbing Administration	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: El Dorado Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
El Dorado 1	Purchase and install critical facility backup generators.	All hazards	El Dorado Administration	High	1, 2	\$250,000 - \$500,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
El Dorado 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	El Dorado Administration	High	1, 2	\$80,000 annually	HMGP, Local budgets	As required	New
El Dorado 3	Acquire traffic control devices capable of alerting the public to events and hazards, such as evacuations.	All hazards	El Dorado Administration	Medium	1, 2	\$150,000	HMGP, Local budgets	Five years	New
El Dorado 4	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	El Dorado Parks Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
El Dorado 5	Prepare a drought response plan that includes a public education program.	Drought	El Dorado Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
El Dorado 6	Conduct public education campaign on home seismic retrofits.	Earthquake	El Dorado Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
El Dorado 7	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	El Dorado Administration	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
El Dorado 8	Continue to participate meet requirements of the NFIP including participating in the Community Rating System (CRS) portion of the program.	Flood	El Dorado NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: El Dorado Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
El Dorado 9	Construct rainwater retention/detention ponds at strategic locations.	Flood	El Dorado Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
El Dorado 10	Clean and repair drainage ditches to maintain capacity.	Flood	El Dorado Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
El Dorado 11	Conduct public education program for driving in winter conditions.	Severe Winter Weather	El Dorado Administration	Low	4	Staff Time	Local budgets	Five years	New
El Dorado 12	Construct community saferooms in select jurisdictional buildings.	Tornado	El Dorado Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
El Dorado 13	Develop a community wildfire protection plan that addresses defensible space buffers around critical facilities and includes a public education element.	Wildfire	El Dorado Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
El Dorado 14	Continue to maintain cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	El Dorado IT Department	Low	1, 2	Data size dependent	Local budgets	On-going	New
El Dorado 15	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	El Dorado Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
El Dorado 16	Provide chlorine scrubbers at water treatment facilities to mitigate a chemical release.	Hazardous Materials Event	El Dorado Administration	Medium	1, 2	\$300,000	HMGP, Local budgets	Five years	New

**Table X: Latham Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Latham 1	Purchase and install critical facility backup generators.	All hazards	Latham City Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Latham 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Latham City Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Latham 3	Institute a tree trimming program near utility lines.	All hazards	Latham City Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Latham 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Latham City Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Latham 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Latham City Administration	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Latham 6	Conduct a personal water use education program.	Drought	Latham City Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Latham 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Latham City Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Latham 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Latham City Administration	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Latham 9	Continue to participate meet requirements of the NFIP.	Flood	Latham City Administration	High	1, 2	Staff time	Local budgets	Continuous	On-going

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Leon 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Leon Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Leon 11	Clean and repair drainage ditches to maintain capacity.	Flood	Leon Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Leon 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Leon Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Leon 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Leon Administration	Low	4	Staff Time	Local budgets	Five years	New
Leon 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Leon Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Leon 15	Create defensible space buffers at all critical facilities	Wildfire	Leon Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Leon 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Leon IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Leon 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Leon Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Potwin Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Potwin 1	Purchase and install critical facility backup generators.	All hazards	City Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Potwin 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	City Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Potwin 3	Institute a tree trimming program near utility lines.	All hazards	City Administration	High	1, 2	\$50,000	HMGP, BRIC, Local Budgets	As required	New
Potwin 4	Replace existing Water and Sewer Lines. These lines are old and deteriorating and need replacing.	All hazards	City Administration	High	2	\$3 Million	HMGP, Local State	Five years	Carried over due to lack of funding
Potwin 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	City Administration	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Potwin 6	Conduct a personal water use education program.	Drought	City Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Potwin 7	Conduct public education campaign on home seismic retrofits.	Earthquake	City Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Potwin 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	City Administration	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Potwin 9	Continue to participate meet requirements of the NFIP.	Flood	City Administration	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Potwin Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Potwin 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	City Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Potwin 11	Clean and repair drainage ditches to maintain capacity.	Flood	City Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Potwin 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms , Wildfires	City Administration	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Potwin 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	City Administration	Low	4	Staff Time	Local budgets	Five years	New
Potwin 14	Construct community saferooms in select jurisdictional buildings.	Tornado	City Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Potwin 15	Create defensible space buffers at all critical facilities	Wildfire	City Administration, Fire Dept	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Potwin 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	City Administration	Low	1, 2	Data size dependent	Local budgets	Five years	New
Potwin 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	City Administration, Potwin Fire Dept	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Potwin 18	Reduce hazardous fuels in prioritized wildfire risk areas.	Wildfire	City Administration, Potwin Fire Dept	Medium	1,2	\$105.00 an acre	Federal WUI grant dollars, Fire budget	On going	Carried over due to lack of funding
Potwin 19	Conduct Wildland Urban Interface response training for firefighters.	Wildfire	Administration, Potwin Fire Dept	Medium	1,2,3	\$30 per student per training	WUI grant dollars, Fire budget	On going	New

**Table X: Rose Hill Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Rose Hill 1	Purchase and install critical facility backup generators.	All hazards	Rose Hill Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Rose Hill 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Rose Hill Administration	Medium	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Rose Hill 3	Institute a tree trimming program near utility lines.	All hazards	Rose Hill Administration	Medium	1, 2	\$15,000 annually	HMGP, BRIC, Local Budgets	As required	On-going
Rose Hill 4	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Rose Hill Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Rose Hill 5	Conduct a personal water use education program.	Drought	Rose Hill Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff

Murdock Township 1	Purchase and install critical facility backup generators.	All hazards	Township Board	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Murdock Township 2	Clean and repair drainage ditches to maintain capacity.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Murdock Township 3	Improve bridges and culverts to enhance drainage and reduce flooding on township roads.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Murdock Township 4	Install hail and fire-resistant roofing on township facilities.	Severe Thunderstorms, Wildfires	Township Board	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Murdock Township 5	Create defensible space buffers at all facilities	Wildfire	Township Board	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Murdock Township 6	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Township Board	Low	1, 2	Data size dependent	Local budgets	Five years	New

**Table X: Prospect Township Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Prospect Township 1	Purchase and install critical facility backup generators.	All hazards	Township Board	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Prospect Township 2	Clean and repair drainage ditches to maintain capacity.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Prospect Township 3	Improve bridges and culverts to enhance drainage and reduce flooding on township roads.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Prospect Township 4	Install hail and fire-resistant roofing on township facilities.	Severe Thunderstorms, Wildfires	Township Board	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Prospect Township 5	Create defensible space buffers at all facilities	Wildfire	Township Board	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Prospect Township 6	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Township Board	Low	1, 2	Data size dependent	Local budgets	Five years	New

**Table X: Rosalia Township Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Rosalia Township 1	Purchase and install critical facility backup generators.	All hazards	Township Board	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Rosalia Township 2	Clean and repair drainage ditches to maintain capacity.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Rosalia Township 3	Improve bridges and culverts to enhance drainage and reduce flooding on township roads.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Rosalia Township 4	Install hail and fire-resistant roofing on township facilities.	Severe Thunderstorms, Wildfires	Township Board	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Rosalia Township 5	Create defensible space buffers at all facilities	Wildfire	Township Board	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Rosalia Township 6	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Township Board	Low	1, 2	Data size dependent	Local budgets	Five years	New

**Table X: Spring Township Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Spring Township 1	Purchase and install critical facility backup generators.	All hazards	Township Board	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Spring Township 2	Clean and repair drainage ditches to maintain capacity.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Spring Township 3	Improve bridges and culverts to enhance drainage and reduce flooding on township roads.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Spring Township 4	Install hail and fire-resistant roofing on township facilities.	Severe Thunderstorms, Wildfires	Township Board	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Spring Township 5	Create defensible space buffers at all facilities	Wildfire	Township Board	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Spring Township 6	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Township Board	Low	1, 2	Data size dependent	Local budgets	Five years	New

**Table X: Sycamore Township Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sycamore Township 1	Purchase and install critical facility backup generators.	All hazards	Township Board	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Sycamore Township 2	Clean and repair drainage ditches to maintain capacity.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sycamore Township 3	Improve bridges and culverts to enhance drainage and reduce flooding on township roads.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sycamore Township 4	Install hail and fire-resistant roofing on township facilities.	Severe Thunderstorms, Wildfires	Township Board	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Sycamore Township 5	Create defensible space buffers at all facilities	Wildfire	Township Board	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Sycamore Township 6	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Township Board	Low	1, 2	Data size dependent	Local budgets	Five years	New

**Table X: Union Township Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Union Township 1	Purchase and install critical facility backup generators.	All hazards	Township Board	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Union Township 2	Clean and repair drainage ditches to maintain capacity.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Union Township 3	Improve bridges and culverts to enhance drainage and reduce flooding on township roads.	Flood	Township Board	High	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Union Township 4	Install hail and fire-resistant roofing on township facilities.	Severe Thunderstorms, Wildfires	Township Board	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Union Township 5	Create defensible space buffers at all facilities	Wildfire	Township Board	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Union Township 6	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Township Board	Low	1, 2	Data size dependent	Local budgets	Five years	New

**Table X: Butler Community College Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Butler Community College 1	Purchase and install facility backup generators (1000, 1100, 1300, 1600, 1800 Buildings).	All hazards	Butler Community College Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, School Budget	Five years	Carried over due to lack of funding
Butler Community College 2	Conduct hazard mitigation education programs for students.	All hazards	Butler Community College Administration	Medium	1, 2, 3	\$2,000	School Budget	As required	New
Butler Community College 3	Construct rainwater gardens adjacent to paved areas.	Flood	Butler Community College Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, School Budget	As required	New
Butler Community College 4	Conduct regular emergency preparedness drills for students, faculty, and staff for issues such as Tornado, fires, and armed intruders.	Wildfire, Tornado, Terrorism/ Agro-terrorism, Civil Disorder, Windstorm	Butler Community College Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New
Butler Community College 5	Covered Car Parking for Butler Fleet Vehicles at Andover and El Dorado	Hail	Butler Community College Administration	Low	1, 2	\$400,000	HMGP, BRIC, School Budget	Five years	New

**Table X: St. James Catholic School Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
St. James Catholic School 1	Purchase and install facility backup generators.	All hazards	St. James Catholic School Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, School Budget	Five years	Carried over due to lack of funding
St. James Catholic School 2	Construct safe rooms in all school buildings to required standards.	All hazards	St. James Catholic School Administration	High	1, 2	\$1,000,000 - per location	HMGP, BRIC, School budget	Ten years	New
St. James Catholic School 3	Conduct hazard mitigation education programs for students.	All hazards	St. James Catholic School Administration	Medium	1, 2, 3	\$2,000	School Budget	As required	New
St. James Catholic School 4	Conduct a xeriscaping program for all school facilities	Drought	St. James Catholic School Administration	Low	1, 2	\$10,000 -per location	HMGP, BRIC, School Budget	Ten years	New
St. James Catholic School 5	Retrofit school facilities to meet minimum seismic construction standards.	Earthquake	St. James Catholic School Administration	Low	1, 2	\$30,000 per facility	HMGP, BRIC, School Budget	Five years	New
St. James Catholic School 6	Construct rainwater gardens adjacent to paved areas.	Flood	St. James Catholic School Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, School Budget	As required	New
St. James Catholic School 7	Conduct regular staff and student active shooter trainings.	Terrorism	St. James Catholic School Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New

**Table X: St. Thomas Catholic School Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
St. Thomas Catholic School 1	Purchase and install facility backup generators.	All hazards	St. Thomas Catholic School Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, School Budget	Five years	Carried over due to lack of funding
St. Thomas Catholic School 2	Construct safe rooms in all school buildings to required standards.	All hazards	St. Thomas Catholic School Administration	High	1, 2	\$1,000,000 - per location	HMGP, BRIC, School budget	Ten years	New
St. Thomas Catholic School 3	Conduct hazard mitigation education programs for students.	All hazards	St. Thomas Catholic School Administration	Medium	1, 2, 3	\$2,000	School Budget	As required	New
St. Thomas Catholic School 4	Conduct a xeriscaping program for all school facilities	Drought	St. Thomas Catholic School Administration	Low	1, 2	\$10,000 -per location	HMGP, BRIC, School Budget	Ten years	New
St. Thomas Catholic School 5	Retrofit school facilities to meet minimum seismic construction standards.	Earthquake	St. Thomas Catholic School Administration	Low	1, 2	\$30,000 per facility	HMGP, BRIC, School Budget	Five years	New
St. Thomas Catholic School 6	Construct rainwater gardens adjacent to paved areas.	Flood	St. Thomas Catholic School Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, School Budget	As required	New
St. Thomas Catholic School 7	Conduct regular staff and student active shooter trainings.	Terrorism	St. Thomas Catholic School Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New

USD #394 4	Conduct a xeriscaping program for all school facilities	Drought	USD #394 Administration	Low	1, 2	\$10,000 -per location	HMGP, BRIC, School Budget	Ten years	New
USD #394 5	Retrofit school facilities to meet minimum seismic construction standards.	Earthquake	USD #394 Administration	Low	1, 2	\$30,000 per facility	HMGP, BRIC, School Budget	Five years	New
USD #394 6	Construct rainwater gardens adjacent to paved areas.	Flood	USD #394 Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, School Budget	As required	New
USD #394 7	Conduct regular staff and student active shooter trainings.	Terrorism	USD #394 Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New

**Table X: USD #396 Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
USD 396-1	Purchase power supply backup generators for schools.	All Hazards	School Resource Officer	High	1,2	\$80,000	HMGP Grant, Local, bond	Pending funding	Not started
USD 396-2	Pursue funding for improved controllable entrances/ exits.	All Hazards	School Resource Officer	Medium	1,2	\$50,000	HMGP Grant, Local, bond	Pending funding	Not started
USD 396-3	Purchase communication radios	All Hazards	School Resource Officer	High	1,2	\$25,000	HMGP Grant, Local, bond	Pending funding	Not started
USD 396-4	Purchase security cameras	All Hazards	School Resource Officer	Medium	1,2	\$25,000	HMGP Grant, Local, bond	Pending funding	Not started

**Table X: USD #402 Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
USD #402 1	Purchase and install facility backup generators.	All hazards	USD #402 Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, School Budget	Five years	Carried over due to lack of funding
USD #402 2	Construct safe rooms in all school buildings to required standards.	All hazards	USD #402 Administration	High	1, 2	\$1,000,000 - per location	HMGP, BRIC, School budget	Ten years	New
USD #402 3	Conduct hazard mitigation education programs for students.	All hazards	USD #402 Administration	Medium	1, 2, 3	\$2,000	School Budget	As required	New
USD #402 4	Conduct a xeriscaping program for all school facilities	Drought	USD #402 Administration	Low	1, 2	\$10,000 -per location	HMGP, BRIC, School Budget	Ten years	New
USD #402 5	Retrofit school facilities to meet minimum seismic construction standards.	Earthquake	USD #402 Administration	Low	1, 2	\$30,000 per facility	HMGP, BRIC, School Budget	Five years	New
USD #402 6	Construct rainwater gardens adjacent to paved areas.	Flood	USD #402 Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, School Budget	As required	New
USD #402 7	Conduct regular staff and student active shooter trainings.	Terrorism	USD #402 Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New

**Table X: USD #490 Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
USD #490 1	Purchase and install facility backup generators in school buildings.	All hazards	USD #490 Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, School Budget	Five years	Completed
USD #490 2	Installation of a FEMA storm shelter at the Bus Barn	All Hazards	Assistant Superintendent	Medium	1,2	\$100,000	HMGP; District Capital Funds	July 2020	Not yet started
USD #490 3	Installation of a FEMA storm shelter at the PAC/Extend campus	All Hazards	Assistant Superintendent	High	1,2	\$1,000,000	HMGP; District Capital Funds	July 2025	Grant submitted
USD #490 4	Conduct hazard mitigation education programs for students.	All hazards	USD #490 Administration	Medium	1, 2, 3	\$2,000	School Budget	As required	Ongoing
USD #490 5	Conduct regular staff and student active shooter trainings.	Terrorism	USD #490 Administration	High	1, 2, 3	Location and size dependent	HMGP, School Budget	As required	Ongoing
USD #490 6	Purchase and implementation of a comprehensive wireless radio system throughout the entire district.	All Hazards	Assistant Superintendent	High	1,2,4	\$100,000	Pre-Disaster Mitigation Program; State Grant	July 2019	Completed
USD #490 7	Updates and increases of crisis buckets in all classrooms and offices	All Hazards	Assistant Superintendent	Medium	1,2	\$10,000	Pre-Disaster Mitigation Program	July 2019	Completed
USD #490 8	Automation & integration of drill language & instructions into school phone and intercom systems	All Hazards	Assistant Superintendent	High	1,2,4	\$5,000	PDM; District Funds	July 2019	Completed
USD #490 9	Construct Safe/Secure Entrance at El Dorado High School	Terrorism	USD #490 Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	August 2024	Completed

**Table X: USD #492 Mitigation Actions**

**Table X: Susan B Allen Hospital Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Susan B Allen Hospital 1	Purchase and install facility backup generators.	All hazards	Susan B Allen Hospital Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Fire budgets	Five years	Carried over due to lack of funding
Susan B Allen Hospital-2	Installation Of Level 4 Bullet Resistant Glass At Two Registration Areas	Terrorism (active shooter)	Manager Of Maintenance / Security & Emerg. Preparedness	High	1, 2	\$20,000	Capital Resources / Internal Funding	Five years	Planning Stage
Susan B Allen Hospital-3	Installation Of Steel Plates Used For Bullet Resistance At Registration Areas	Terrorism (active shooter)	Manager Of Maintenance / Security & Emerg. Preparedness	High	1, 2	\$6,500	Capital Resources / Internal Funding	Five years	Planning Stage
Susan B Allen Hospital-4	Installation Of Exterior Bollards To Prevent A Vehicle From Coming Through The Front Of The Building	Terrorist	Manager Of Maintenance / Security & Emerg. Preparedness	High	1, 2	\$50,000	Capital Resources / Internal Funding	Five years	Planning Stage
Susan B Allen Hospital-5	HAZMAT / DECON Training & Equipment For Staff	Hazardous Materials	Emergency Preparedness	High	1, 2, 3	\$5,000	State, Federal, Local	Five years	Planning Stage

**Table X: Cowley County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Cowley County 1	Install generators in all county facilities.	All hazards	Cowley County Emergency Manager, Cowley County Facilities Department	High	1, 3	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Cowley County 2	Upgrade and enhance sirens throughout county	All hazards	Cowley County Emergency Manager	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of funding
Cowley County 3	Purchase electronic mobile traffic notification signs.	All Hazards	Cowley County Emergency Manager, Cowley County Public Works	Medium	1, 2	\$35,000	HMGP, Local budgets	Five years	New
Cowley County 4	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	Cowley County Emergency Manager	High	1, 2	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
Cowley County 5	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	Cowley County Emergency Manager	High	1, 3	Staff Time	Local budgets	Five years	Carried over due to lack of staff
Cowley County 6	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	Cowley County Emergency Manager	High	1, 2	Staff Time and \$500	Local budgets	Five years	Carried over due to lack of staff
Cowley County 7	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	Cowley County Emergency Manager, Cowley County Facilities Department	Low	1, 2	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Cowley County 8	Revise building codes to require low water flow toilets and faucets.	Drought	Cowley County Administration	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of staff

**Table X: Cowley County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Cowley County 9	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	Cowley County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Cowley County 10	Identify and prepare county building for usage as heat/cold shelters.	Extreme Temperatures	Cowley County Facilities Department	Low	1, 2	\$2,000 per facility	BRIC, Local budgets	Five years	New
Cowley County 11	Continue to participate in, and enforce provisions of, NFIP.	Flood	NFIP Administrator	High	1, 2	Per property cost	Local budgets	On-going	On-going
Cowley County 12	Purchase and demolish flood prone properties	Flood	Cowley County Emergency Manager, NFIP Administrator	High	1, 2	Per property cost	FMA, HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Cowley County 13	Conduct a flood insurance awareness program.	Flood	NFIP Administrator	High	1, 3	Staff Time	Local budgets	Five years	New
Cowley County 14	Construct rainwater retention/detention ponds at strategic locations.	Flood	NFIP Administrator, Cowley County Public Works	Medium	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Cowley County 15	Procure permanent signage to warn of flood hazard areas.	Flood	NFIP Administrator, Cowley County Emergency Manager	Medium	1, 2	Location dependent	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Cowley County 16	Install surge protectors in all jurisdictional facilities.	Severe Thunderstorms	Cowley County Facilities Department	Medium	1, 2	\$10,000 per location	HMGP, BRIC, Local budgets	Five years	New
Cowley County 17	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Cowley County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New

**Table X: Cowley County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Cowley County 18	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	Cowley County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Cowley County 19	Construct snow fences along major transportation routes.	Winter Storm	Cowley County Public Works	Low	1, 2	\$25,000 - \$100,000 per location	HMGP, PDM, Local budgets	Ten years	Carried over due to lack of funding
Cowley County 20	Insulate water lines in all jurisdictional facilities.	Winter Storm	Cowley County Building Department	Low	1, 2	\$10,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Cowley County 21	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Cowley County Building Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Cowley County 22	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Cowley County IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Cowley County 23	Provide hazardous materials response training to first responders and emergency management staff.	Hazardous Materials Event	Cowley County Emergency Manager	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Cowley County 24	Identify and map all structurally deficient bridges.	Infrastructure Failure	Cowley County Public Works	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Cowley County 25	Conduct active shooter drills and exercises for all county personnel.	Terrorism	Cowley County Sheriff's Office	Low	1, 2	Data size dependent	Local budgets	Five years	New
Cowley County 26	Purchase and install new epidemiological tracking software.	Transmissible Disease	Cowley County Health Department	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

USD 463 7	Conduct regular staff and student active shooter trainings.	Terrorism	School Name Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New

**Table X: USD 470 Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
USD 470 1	Purchase and install facility backup generators.	All hazards	USD 470 Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, School Budget	Five years	Carried over due to lack of funding
USD 470 2	Construct safe rooms in all school buildings to required standards.	All hazards	USD 470 Administration	High	1, 2	\$1,000,000 - per location	HMGP, BRIC, School budget	Ten years	New
USD 470 3	Conduct hazard mitigation education programs for students.	All hazards	USD 470 Administration	Medium	1, 2, 3	\$2,000	School Budget	As required	New
USD 470 4	Conduct a xeriscaping program for all school facilities	Drought	USD 470 Administration	Low	1, 2	\$10,000 -per location	HMGP, BRIC, School Budget	Ten years	New
USD 470 5	Retrofit school facilities to meet minimum seismic construction standards.	Earthquake	USD 470 Administration	Low	1, 2	\$30,000 per facility	HMGP, BRIC, School Budget	Five years	New
USD 470 6	Construct rainwater gardens adjacent to paved areas.	Flood	USD 470 Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, School Budget	As required	New
USD 470 7	Conduct regular staff and student active shooter trainings.	Terrorism	USD 470 Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New

**Table X: USD 471 Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
USD 471 1	Purchase and install facility backup generators.	All hazards	USD 471 Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, School Budget	Five years	Carried over due to lack of funding
USD 471 2	Construct safe rooms in all school buildings to required standards.	All hazards	USD 471 Administration	High	1, 2	\$1,000,000 - per location	HMGP, BRIC, School budget	Ten years	New
USD 471 3	Conduct hazard mitigation education programs for students.	All hazards	USD 471 Administration	Medium	1, 2, 3	\$2,000	School Budget	As required	New
USD 471 4	Conduct a xeriscaping program for all school facilities	Drought	USD 471 Administration	Low	1, 2	\$10,000 -per location	HMGP, BRIC, School Budget	Ten years	New
USD 471 5	Retrofit school facilities to meet minimum seismic construction standards.	Earthquake	USD 471 Administration	Low	1, 2	\$30,000 per facility	HMGP, BRIC, School Budget	Five years	New
USD 471 6	Construct rainwater gardens adjacent to paved areas.	Flood	USD 471 Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, School Budget	As required	New
USD 471 7	Conduct regular staff and student active shooter trainings.	Terrorism	USD 471 Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New

**Table X: Butler REC Mitigation Actions**

Butler REC 1	Purchase and install critical location backup generators.	All hazards	Butler REC Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Butler REC 2	Shorten distance between utility poles.	All hazards	Butler REC Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Sumner County REC Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sumner County REC 1	Purchase and install critical location backup generators.	All hazards	Sumner County REC Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Sumner County REC 2	Shorten distance between utility poles.	All hazards	Sumner County REC Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Cowley County RFD #4 Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Cowley County RFD #4 1	Purchase and install facility backup generators.	All hazards	Cowley County RFD #4 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Fire budgets	Five years	Carried over due to lack of funding
Cowley County RFD #4 2	Reduce hazardous fuels in prioritized wildfire risk areas.	Wildfire	Cowley County RFD #4 Administration	Medium	1,2	\$105.00 an acre	Federal WUI grant dollars, Fire budget	On going	Carried over due to lack of funding
Cowley County RFD #4 3	Conduct Wildland Urban Interface response training for firefighters.	Wildfire	Cowley County RFD #4 Administration	Medium	1,2,3	\$30 per student per training	Federal WUI grant dollars, Fire budget	On going	New

**Table X: Fire Name Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Fire Name 1	Purchase and install facility backup generators.	All hazards	Fire Name Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Fire budgets	Five years	Carried over due to lack of funding
Fire Name 2	Reduce hazardous fuels in prioritized wildfire risk areas.	Wildfire	Fire Name Administration	Medium	1,2	\$105.00 an acre	Federal WUI grant dollars, Fire budget	On going	Carried over due to lack of funding
Fire Name 3	Conduct Wildland Urban Interface response training for firefighters.	Wildfire	Fire Name Administration	Medium	1,2,3	\$30 per student per training	Federal WUI grant dollars, Fire budget	On going	New

**Table X: Rural Water District #1 Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Rural Water District #1 1	Purchase and install facility backup generators.	All hazards	Rural Water District #1 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding
Rural Water District #1 2	Replace water lines at critical locations throughout service area.	All hazards	Rural Water District #1 Administration	Medium	1,2	Project size and location dependent	Bric, HMGP, System budget	On going	New

**Table X: Big Caney RWD #1 Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Big Caney RWD #1 1	Purchase and install facility backup generators.	All hazards	Big Caney RWD #1 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding
Big Caney RWD #1 2	Replace water lines at critical locations throughout service area.	All hazards	Big Caney RWD #1 Administration	Medium	1,2	Project size and location dependent	Bric, HMGP, System budget	On going	New

**Table X: Harper County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Harper County 1	Install generators in all county facilities.	All hazards	Harper County Emergency Manager, Harper County Facilities Department	High	1, 3	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harper County 2	Upgrade and enhance sirens throughout county	All hazards	Harper County Emergency Manager	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of funding
Harper County 3	Purchase electronic mobile traffic notification signs.	All Hazards	Harper County Emergency Manager, Harper County Public Works	Medium	1, 2	\$35,000	HMGP, Local budgets	Five years	New
Harper County 4	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	Harper County Emergency Manager	High	1, 2	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
Harper County 5	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	Harper County Emergency Manager	High	1, 3	Staff Time	Local budgets	Five years	Carried over due to lack of staff
Harper County 6	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	Harper County Emergency Manager	High	1, 2	Staff Time and \$500	Local budgets	Five years	Carried over due to lack of staff
Harper County 7	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	Harper County Emergency Manager, Harper County Facilities Department	Low	1, 2	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Harper County 8	Revise building codes to require low water flow toilets and faucets.	Drought	Harper County Administration	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of staff

**Table X: Harper County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Harper County 9	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	Harper County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Harper County 10	Identify and prepare county building for usage as heat/cold shelters.	Extreme Temperatures	Harper County Facilities Department	Low	1, 2	\$2,000 per facility	BRIC, Local budgets	Five years	New
Harper County 11	Continue to participate in, and enforce provisions of, NFIP.	Flood	NFIP Administrator	High	1, 2	Per property cost	Local budgets	On-going	On-going
Harper County 12	Purchase and demolish flood prone properties	Flood	Harper County Emergency Manager, NFIP Administrator	High	1, 2	Per property cost	FMA, HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harper County 13	Conduct a flood insurance awareness program.	Flood	NFIP Administrator	High	1, 3	Staff Time	Local budgets	Five years	New
Harper County 14	Construct rainwater retention/detention ponds at strategic locations.	Flood	NFIP Administrator, Harper County Public Works	Medium	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harper County 15	Procure permanent signage to warn of flood hazard areas.	Flood	NFIP Administrator, Harper County Emergency Manager	Medium	1, 2	Location dependent	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Harper County 16	Install surge protectors in all jurisdictional facilities.	Severe Thunderstorms	Harper County Facilities Department	Medium	1, 2	\$10,000 per location	HMGP, BRIC, Local budgets	Five years	New
Harper County 17	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Harper County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New

**Table X: Harper County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Harper County 18	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	Harper County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harper County 19	Construct snow fences along major transportation routes.	Winter Storm	Harper County Public Works	Low	1, 2	\$25,000 - \$100,000 per location	HMGP, PDM, Local budgets	Ten years	Carried over due to lack of funding
Harper County 20	Insulate water lines in all jurisdictional facilities.	Winter Storm	Harper County Building Department	Low	1, 2	\$10,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Harper County 21	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Harper County Building Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Harper County 22	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Harper County IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Harper County 23	Provide hazardous materials response training to first responders and emergency management staff.	Hazardous Materials Event	Harper County Emergency Manager	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Harper County 24	Identify and map all structurally deficient bridges.	Infrastructure Failure	Harper County Public Works	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harper County 25	Conduct active shooter drills and exercises for all county personnel.	Terrorism	Harper County Sheriff's Office	Low	1, 2	Data size dependent	Local budgets	Five years	New
Harper County 26	Purchase and install new epidemiological tracking software.	Transmissible Disease	Harper County Health Department	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Anthony Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Anthony 1	Purchase and install critical facility backup generators.	All hazards	Anthony Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Anthony 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Anthony Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Anthony 3	Institute a tree trimming program near utility lines.	All hazards	Anthony Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Anthony 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Anthony Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Anthony 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Anthony Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Anthony 6	Conduct a personal water use education program.	Drought	Anthony Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Anthony 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Anthony Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Anthony 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Anthony Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Anthony 9	Continue to participate meet requirements of the NFIP.	Flood	Anthony NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Anthony Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Anthony 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Anthony Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Anthony 11	Clean and repair drainage ditches to maintain capacity.	Flood	Anthony Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Anthony 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Anthony Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Anthony 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Anthony Administration	Low	4	Staff Time	Local budgets	Five years	New
Anthony 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Anthony Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Anthony 15	Create defensible space buffers at all critical facilities	Wildfire	Anthony Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Anthony 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Anthony IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Anthony 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Anthony Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

Patterson Health Center 1	Purchase and install facility backup generators.	All hazards	Patterson Health Center Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System Budget	Five years	Carried over due to lack of funding
Patterson Health Center 2	Construct safe rooms in all hospital buildings.	All hazards	Patterson Health Center Administration	High	1, 2	\$1,000,000 - per location	HMGP, BRIC, System budget	Ten years	New

**Table X: Sumner County REC Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sumner County REC 1	Purchase and install critical location backup generators.	All hazards	Sumner County REC Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Sumner County REC 2	Shorten distance between utility poles.	All hazards	Sumner County REC Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Sunflower Electric Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sunflower Electric 1	Purchase and install critical location backup generators.	All hazards	Sunflower Electric Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Sunflower Electric 2	Shorten distance between utility poles.	All hazards	Sunflower Electric Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Wheatland REC Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Wheatland REC 1	Purchase and install critical location backup generators.	All hazards	Wheatland REC Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Wheatland REC 2	Shorten distance between utility poles.	All hazards	Wheatland REC Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Harvey County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Harvey County 1	Install generators in all county facilities.	All hazards	Harvey County Emergency Manager, Harvey County Facilities Department	High	1, 3	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harvey County 2	Upgrade and enhance sirens throughout county	All hazards	Harvey County Emergency Manager	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of funding
Harvey County 3	Purchase electronic mobile traffic notification signs.	All Hazards	Harvey County Emergency Manager, Harvey County Public Works	Medium	1, 2	\$35,000	HMGP, Local budgets	Five years	New
Harvey County 4	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	Harvey County Emergency Manager	High	1, 2	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
Harvey County 5	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	Harvey County Emergency Manager	High	1, 3	Staff Time	Local budgets	Five years	Carried over due to lack of staff
Harvey County 6	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	Harvey County Emergency Manager	High	1, 2	Staff Time and \$500	Local budgets	Five years	Carried over due to lack of staff
Harvey County 7	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	Harvey County Emergency Manager, Harvey County Facilities Department	Low	1, 2	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Harvey County 8	Revise building codes to require low water flow toilets and faucets.	Drought	Harvey County Administration	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of staff

**Table X: Harvey County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Harvey County 9	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	Harvey County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Harvey County 10	Identify and prepare county building for usage as heat/cold shelters.	Extreme Temperatures	Harvey County Facilities Department	Low	1, 2	\$2,000 per facility	BRIC, Local budgets	Five years	New
Harvey County 11	Continue to participate in, and enforce provisions of, NFIP.	Flood	NFIP Administrator	High	1, 2	Per property cost	Local budgets	On-going	On-going
Harvey County 12	Purchase and demolish flood prone properties	Flood	Harvey County Emergency Manager, NFIP Administrator	High	1, 2	Per property cost	FMA, HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harvey County 13	Conduct a flood insurance awareness program.	Flood	NFIP Administrator	High	1, 3	Staff Time	Local budgets	Five years	New
Harvey County 14	Construct rainwater retention/detention ponds at strategic locations.	Flood	NFIP Administrator, Harvey County Public Works	Medium	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harvey County 15	Procure permanent signage to warn of flood hazard areas.	Flood	NFIP Administrator, Harvey County Emergency Manager	Medium	1, 2	Location dependent	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Harvey County 16	Install surge protectors in all jurisdictional facilities.	Severe Thunderstorms	Harvey County Facilities Department	Medium	1, 2	\$10,000 per location	HMGP, BRIC, Local budgets	Five years	New
Harvey County 17	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Harvey County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New

**Table X: Harvey County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Harvey County 18	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	Harvey County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harvey County 19	Construct snow fences along major transportation routes.	Winter Storm	Harvey County Public Works	Low	1, 2	\$25,000 - \$100,000 per location	HMGP, PDM, Local budgets	Ten years	Carried over due to lack of funding
Harvey County 20	Insulate water lines in all jurisdictional facilities.	Winter Storm	Harvey County Building Department	Low	1, 2	\$10,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Harvey County 21	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Harvey County Building Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Harvey County 22	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Harvey County IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Harvey County 23	Provide hazardous materials response training to first responders and emergency management staff.	Hazardous Materials Event	Harvey County Emergency Manager	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Harvey County 24	Identify and map all structurally deficient bridges.	Infrastructure Failure	Harvey County Public Works	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Harvey County 25	Conduct active shooter drills and exercises for all county personnel.	Terrorism	Harvey County Sheriff's Office	Low	1, 2	Data size dependent	Local budgets	Five years	New
Harvey County 26	Purchase and install new epidemiological tracking software.	Transmissible Disease	Harvey County Health Department	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Burrton Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Burrton 1	Purchase and install critical facility backup generators.	All hazards	Burrton Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Burrton 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Burrton Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Burrton 3	Institute a tree trimming program near utility lines.	All hazards	Burrton Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Burrton 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Burrton Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Burrton 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Burrton Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Burrton 6	Conduct a personal water use education program.	Drought	Burrton Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Burrton 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Burrton Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Burrton 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Burrton Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Burrton 9	Continue to participate meet requirements of the NFIP.	Flood	Burrton NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Burrton Mitigation Actions**

Halstead 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Halstead Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Hesston Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Hesston 1	Purchase and install critical facility backup generators.	All hazards	Hesston Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Hesston 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Hesston Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Hesston 3	Institute a tree trimming program near utility lines.	All hazards	Hesston Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Hesston 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Hesston Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Hesston 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Hesston Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Hesston 6	Conduct a personal water use education program.	Drought	Hesston Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Hesston 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Hesston Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Hesston 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Hesston Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Hesston 9	Continue to participate meet requirements of the NFIP.	Flood	Hesston NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Hesston Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Hesston 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Hesston Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Hesston 11	Clean and repair drainage ditches to maintain capacity.	Flood	Hesston Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Hesston 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Hesston Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Hesston 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Hesston Administration	Low	4	Staff Time	Local budgets	Five years	New
Hesston 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Hesston Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Hesston 15	Create defensible space buffers at all critical facilities	Wildfire	Hesston Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Hesston 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Hesston IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Hesston 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Hesston Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Newton Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Newton 1	Purchase and install critical facility backup generators.	All hazards	Newton Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Newton 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Newton Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Newton 3	Institute a tree trimming program near utility lines.	All hazards	Newton Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Newton 4	Develop Fire/EMS Station 4 in N. area Newton	All hazards	Newton Fire Chief	Med		\$15,000,000	BRIC, local budgets	Five years	New
Newton 5	Relocate Fire/EMS Station 2 and make Emergency Services Center	All hazards	Newton Fire Chief	Med		\$20,000,000	BRIC, local budgets	5-7 years	New
Newton 6	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Newton Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Newton 7	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Newton Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Newton 8	Conduct a personal water use education program.	Drought	Newton Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Newton94	Conduct public education campaign on home seismic retrofits.	Earthquake	Newton Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Newton 10	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Newton Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff

Butler REC 1	Purchase and install critical location backup generators.	All hazards	Butler REC Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Butler REC 2	Shorten distance between utility poles.	All hazards	Butler REC Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Flint Hills REC Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Flint Hills REC 1	Purchase and install critical location backup generators.	All hazards	Flint Hills REC Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Flint Hills REC 2	Shorten distance between utility poles.	All hazards	Flint Hills REC Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Ark Valley Electric Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Ark Valley Electric 1	Purchase and install critical location backup generators.	All hazards	Ark Valley Electric Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Ark Valley Electric 2	Shorten distance between utility poles.	All hazards	Ark Valley Electric Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Burrton CFD #5 Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Burrton CFD #5 1	Purchase and install facility backup generators.	All hazards	Burrton CFD #5 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Fire budgets	Five years	Carried over due to lack of funding
Burrton CFD #5 2	Reduce hazardous fuels in prioritized wildfire risk areas.	Wildfire	Burrton CFD #5 Administration	Medium	1,2	\$105.00 an acre	Federal WUI grant dollars, Fire budget	On going	Carried over due to lack of funding
Burrton CFD #5 3	Conduct Wildland Urban Interface response training for firefighters.	Wildfire	Burrton CFD #5 Administration	Medium	1,2,3	\$30 per student per training	Federal WUI grant dollars, Fire budget	On going	New

**Table X: Harvey County RFD #1 Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Harvey County RFD #1 1	Purchase and install facility backup generators.	All hazards	Harvey County RFD #1 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Fire budgets	Five years	Carried over due to lack of funding
Harvey County RFD #1 2	Reduce hazardous fuels in prioritized wildfire risk areas.	Wildfire	Harvey County RFD #1 Administration	Medium	1,2	\$105.00 an acre	Federal WUI grant dollars, Fire budget	On going	Carried over due to lack of funding
Harvey County RFD #1 3	Conduct Wildland Urban Interface response training for firefighters.	Wildfire	Harvey County RFD #1 Administration	Medium	1,2,3	\$30 per student per training	Federal WUI grant dollars, Fire budget	On going	New

**Table X: Kingman County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Kingman County 1	Install generators in all county facilities.	All hazards	Kingman County Emergency Manager, Kingman County Facilities Department	High	1, 3	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Kingman County 2	Upgrade and enhance sirens throughout county	All hazards	Kingman County Emergency Manager	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of funding
Kingman County 3	Purchase electronic mobile traffic notification signs.	All Hazards	Kingman County Emergency Manager, Kingman Public Works	Medium	1, 2	\$35,000	HMGP, Local budgets	Five years	New
Kingman County 4	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	Kingman County Emergency Manager	High	1, 2	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
Kingman County 5	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	Kingman County Emergency Manager	High	1, 3	Staff Time	Local budgets	Five years	Carried over due to lack of staff
Kingman County 6	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	Kingman County Emergency Manager	High	1, 2	Staff Time and \$500	Local budgets	Five years	Carried over due to lack of staff

**Table X: Kingman County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Kingman County 7	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	Kingman County Emergency Manager, Kingman County Facilities Department	Low	1, 2	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Kingman County 8	Revise building codes to require low water flow toilets and faucets.	Drought	Kingman County Administration	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of staff
Kingman County 9	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	Kingman County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Kingman County 10	Identify and prepare county building for usage as heat/cold shelters.	Extreme Temperatures	Kingman County Facilities Department	Low	1, 2	\$2,000 per facility	BRIC, Local budgets	Five years	New
Kingman County 11	Continue to participate in, and enforce provisions of, NFIP.	Flood	NFIP Administrator	High	1, 2	Per property cost	Local budgets	On-going	On-going
Kingman County 12	Purchase and demolish flood prone properties	Flood	Kingman County NFIP Administrator	High	1, 2	Per property cost	FMA, HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Kingman County 13	Conduct a flood insurance awareness program.	Flood	NFIP Administrator	High	1, 3	Staff Time	Local budgets	Five years	New
Kingman County 14	Construct rainwater retention/detention ponds at strategic locations.	Flood	NFIP Administrator, Kingman County Public Works	Medium	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding

**Table X: Kingman County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Kingman County 15	Procure permanent signage to warn of flood hazard areas.	Flood	Kingman County Emergency Manager	Medium	1, 2	Location dependent	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Kingman County 16	Install surge protectors in all jurisdictional facilities.	Severe Thunderstorms	Kingman County Facilities Department	Medium	1, 2	\$10,000 per location	HMGP, BRIC, Local budgets	Five years	New
Kingman County 17	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Kingman County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Kingman County 18	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	Kingman County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Kingman County 19	Construct snow fences along major transportation routes.	Winter Storm	Kingman County Public Works	Low	1, 2	\$25,000 - \$100,000 per location	HMGP, PDM, Local budgets	Ten years	Carried over due to lack of funding
Kingman County 20	Insulate water lines in all jurisdictional facilities.	Winter Storm	Kingman County Building Department	Low	1, 2	\$10,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Kingman County 21	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Kingman County Building Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Kingman County 22	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	Kingman County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Kingman County 23	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Kingman County IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New

**Table X: Kingman County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Kingman County 24	Provide hazardous materials response training to first responders and emergency management staff.	Hazardous Materials Event	Kingman County Emergency Manager	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Kingman County 16	Identify and map all structurally deficient bridges.	Infrastructure Failure	Kingman County Public Works	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Kingman County 17	Conduct active shooter drills and exercises for all county personnel.	Terrorism	Kingman County Sheriff's Office	Low	1, 2	Data size dependent	Local budgets	Five years	New
Kingman County 21	Purchase and install new epidemiological tracking software.	Transmissible Disease	Kingman County Health Department	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: UDS 331 Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
UDS 331 1	Purchase and install facility backup generators.	All hazards	UDS 331 Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, School Budget	Five years	Carried over due to lack of funding
UDS 331 2	Construct safe rooms in all school buildings to required standards.	All hazards	UDS 331 Administration	High	1, 2	\$1,000,000 - per location	HMGP, BRIC, School budget	Ten years	New
UDS 331 3	Conduct hazard mitigation education programs for students.	All hazards	UDS 331 Administration	Medium	1, 2, 3	\$2,000	School Budget	As required	New
UDS 331 4	Conduct a xeriscaping program for all school facilities	Drought	UDS 331 Administration	Low	1, 2	\$10,000 -per location	HMGP, BRIC, School Budget	Ten years	New
UDS 331 5	Retrofit school facilities to meet minimum seismic construction standards.	Earthquake	UDS 331 Administration	Low	1, 2	\$30,000 per facility	HMGP, BRIC, School Budget	Five years	New
UDS 331 6	Construct rainwater gardens adjacent to paved areas.	Flood	UDS 331 Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, School Budget	As required	New
UDS 331 7	Conduct regular staff and student active shooter trainings.	Terrorism	UDS 331 Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New

**Table X: Arkansas Valley Electric Cooperative Mitigation Actions**

**Table X: Burns Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Burns 1	Purchase and install critical facility backup generators.	All hazards	Burns Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Burns 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Burns Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Burns 3	Institute a tree trimming program near utility lines.	All hazards	Burns Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Burns 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Burns Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Burns 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Burns Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Burns 6	Conduct a personal water use education program.	Drought	Burns Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Burns 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Burns Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Burns 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Burns Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Burns 9	Continue to participate meet requirements of the NFIP.	Flood	Burns NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Burns Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Burns 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Burns Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Burns 11	Clean and repair drainage ditches to maintain capacity.	Flood	Burns Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Burns 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Burns Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Burns 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Burns Administration	Low	4	Staff Time	Local budgets	Five years	New
Burns 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Burns Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Burns 15	Create defensible space buffers at all critical facilities	Wildfire	Burns Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Burns 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Burns IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Burns 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Burns Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Florence Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Florence 1	Purchase and install critical facility backup generators.	All hazards	Florence Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Florence 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Florence Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Florence 3	Institute a tree trimming program near utility lines.	All hazards	Florence Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Florence 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Florence Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Florence 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Florence Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Florence 6	Conduct a personal water use education program.	Drought	Florence Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Florence 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Florence Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Florence 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Florence Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Florence 9	Continue to participate meet requirements of the NFIP.	Flood	Florence NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

Hillsboro Industries 1	Purchase and install facility backup generators.	All hazards	Hillsboro Industries Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding

**Table X: McPherson County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
McPherson County 1	Install generators in all county facilities.	All hazards	County Emergency Manager, County Facilities Department	High	1, 3	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
McPherson County 2	Upgrade and enhance sirens throughout county	All hazards	McPherson County Emergency Manager	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of funding
McPherson County 3	Purchase electronic mobile traffic notification signs.	All Hazards	McPherson County Emergency Manager, McPherson Public Works	Medium	1, 2	\$35,000	HMGP, Local budgets	Five years	New
McPherson County 4	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	McPherson County Emergency Manager	High	1, 2	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
McPherson County 5	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	McPherson County Emergency Manager	High	1, 3	Staff Time	Local budgets	Five years	Carried over due to lack of staff
McPherson County 6	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	McPherson County Emergency Manager	High	1, 2	Staff Time and \$500	Local budgets	Five years	Carried over due to lack of staff
McPherson County 7	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	McPherson County Facilities Department	Low	1, 2	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding

**Table X: McPherson County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
McPherson County 8	Revise building codes to require low water flow toilets and faucets.	Drought	McPherson County Administration	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of staff
McPherson County 9	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	McPherson County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
McPherson County 10	Identify and prepare county building for usage as heat/cold shelters.	Extreme Temperatures	McPherson County Facilities Department	Low	1, 2	\$2,000 per facility	BRIC, Local budgets	Five years	New
McPherson County 11	Continue to participate in, and enforce provisions of, NFIP.	Flood	NFIP Administrator	High	1, 2	Per property cost	Local budgets	On-going	On-going
McPherson County 12	Purchase and demolish flood prone properties	Flood	McPherson County Emergency Manager, NFIP Administrator	High	1, 2	Per property cost	FMA, HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
McPherson County 13	Conduct a flood insurance awareness program.	Flood	NFIP Administrator	High	1, 3	Staff Time	Local budgets	Five years	New
McPherson County 14	Construct rainwater retention/detention ponds at strategic locations.	Flood	NFIP Administrator, McPherson County Public Works	Medium	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
McPherson County 15	Procure permanent signage to warn of flood hazard areas.	Flood	NFIP Administrator, County Emergency Manager	Medium	1, 2	Location dependent	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
McPherson County 16	Install surge protectors in all jurisdictional facilities.	Severe Thunderstorms	McPherson County Facilities Department	Medium	1, 2	\$10,000 per location	HMGP, BRIC, Local budgets	Five years	New

**Table X: McPherson County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
McPherson County 17	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
McPherson County 18	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	McPherson County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
McPherson County 19	Construct snow fences along major transportation routes.	Winter Storm	McPherson County Public Works	Low	1, 2	\$25,000 - \$100,000 per location	HMGP, PDM, Local budgets	Ten years	Carried over due to lack of funding
McPherson County 20	Insulate water lines in all jurisdictional facilities.	Winter Storm	McPherson County Building Department	Low	1, 2	\$10,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
McPherson County 21	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	McPherson County Building Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
McPherson County 22	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	McPherson County IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
McPherson County 23	Provide hazardous materials response training to first responders and emergency management staff.	Hazardous Materials Event	McPherson County Emergency Manager	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
McPherson County 24	Identify and map all structurally deficient bridges.	Infrastructure Failure	McPherson County Public Works	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
McPherson County 25	Conduct active shooter drills and exercises for all county personnel.	Terrorism	County Sheriff's Office	Low	1, 2	Data size dependent	Local budgets	Five years	New
McPherson County 26	Purchase and install new epidemiological tracking software.	Transmissible Disease	County Health Department	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Canton Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Canton 1	Purchase and install critical facility backup generators.	All hazards	Canton Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Canton 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Canton Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Canton 3	Institute a tree trimming program near utility lines.	All hazards	Canton Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Canton 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Canton Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Canton 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Canton Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Canton 6	Conduct a personal water use education program.	Drought	Canton Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Canton 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Canton Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Canton 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Canton Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Canton 9	Continue to participate meet requirements of the NFIP.	Flood	Canton NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Canton Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Canton 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Canton Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Canton 11	Clean and repair drainage ditches to maintain capacity.	Flood	Canton Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Canton 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Canton Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Canton 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Canton Administration	Low	4	Staff Time	Local budgets	Five years	New
Canton 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Canton Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Canton 15	Create defensible space buffers at all critical facilities	Wildfire	Canton Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Canton 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Canton IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Canton 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Canton Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Marquette 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Marquette Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Marquette 11	Clean and repair drainage ditches to maintain capacity.	Flood	Marquette Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Marquette 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Marquette Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Marquette 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Marquette Administration	Low	4	Staff Time	Local budgets	Five years	New
Marquette 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Marquette Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Marquette 15	Create defensible space buffers at all critical facilities	Wildfire	Marquette Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Marquette 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Marquette IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Marquette 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Marquette Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: McPherson Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
McPherson 1	Purchase and install critical facility backup generators.	All hazards	McPherson Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
McPherson 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	McPherson Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
McPherson 3	Institute a tree trimming program near utility lines.	All hazards	McPherson Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
McPherson 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	McPherson Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
McPherson 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	McPherson Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
McPherson 6	Conduct a personal water use education program.	Drought	McPherson Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
McPherson 7	Conduct public education campaign on home seismic retrofits.	Earthquake	McPherson Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
McPherson 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	McPherson Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
McPherson 9	Continue to participate meet requirements of the NFIP.	Flood	McPherson NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

Lindsborg Community Hospital 1	Increase capacity of facility backup generators.	All hazards	Lindsborg Community Hospital Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Fire budgets	Five years	Carried over due to lack of funding

**Table X: McPherson Hospital Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
McPherson Hospital 1	Increase capacity of facility backup generators.	All hazards	McPherson Hospital Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Fire budgets	Five years	Carried over due to lack of funding

**Table X: Mercy Hospital Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Mercy Hospital 1	Increase capacity of facility backup generators.	All hazards	Mercy Hospital Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Fire budgets	Five years	Carried over due to lack of funding

**Table X: Reno County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Reno County 1	Install generators in all county facilities.	All hazards	Reno County Emergency Manager, Reno County Facilities Department	High	1, 3	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Reno County 2	Upgrade and enhance sirens throughout county	All hazards	Reno County Emergency Manager	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of funding
Reno County 3	Purchase electronic mobile traffic notification signs.	All Hazards	Reno County Emergency Manager, Reno County Director of Public Works	Medium	1, 2	\$35,000	HMGP, Local budgets	Five years	New
Reno County 4	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	Reno County Emergency Manager	High	1, 2	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
Reno County 5	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	Reno County Emergency Manager	High	1, 3	Staff Time	Local budgets	Five years	Carried over due to lack of staff
Reno County 6	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	Reno County Emergency Manager	High	1, 2	Staff Time and \$500	Local budgets	Five years	Carried over due to lack of staff
Reno County 7	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	Reno County Emergency Manager, Reno County Facilities Department	Low	1, 2	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Reno County 8	Revise building codes to require low water flow toilets and faucets.	Drought	Reno County Administration	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of staff

**Table X: Reno County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Reno County 9	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	Reno County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Reno County 10	Identify and prepare county building for usage as heat/cold shelters.	Extreme Temperatures	Reno County Facilities Department	Low	1, 2	\$2,000 per facility	BRIC, Local budgets	Five years	New
Reno County 11	Continue to participate in, and enforce provisions of, NFIP.	Flood	NFIP Administrator	High	1, 2	Per property cost	Local budgets	On-going	On-going
Reno County 12	Purchase and demolish flood prone properties	Flood	Reno County Emergency Manager, NFIP Administrator	High	1, 2	Per property cost	FMA, HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Reno County 13	Conduct a flood insurance awareness program.	Flood	NFIP Administrator	High	1, 3	Staff Time	Local budgets	Five years	New
Reno County 14	Construct rainwater retention/detention ponds at strategic locations.	Flood	NFIP Administrator, Reno County Public Works	Medium	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Reno County 15	Procure permanent signage to warn of flood hazard areas.	Flood	NFIP Administrator, Reno County Emergency Manager	Medium	1, 2	Location dependent	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Reno County 16	Install surge protectors in all jurisdictional facilities.	Severe Thunderstorms	Reno County Facilities Department	Medium	1, 2	\$10,000 per location	HMGP, BRIC, Local budgets	Five years	New
Reno County 17	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Reno County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New

**Table X: Reno County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Reno County 18	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	Reno County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Reno County 19	Construct snow fences along major transportation routes.	Winter Storm	Reno County Public Works	Low	1, 2	\$25,000 - \$100,000 per location	HMGP, PDM, Local budgets	Ten years	Carried over due to lack of funding
Reno County 20	Insulate water lines in all jurisdictional facilities.	Winter Storm	Reno County Building Department	Low	1, 2	\$10,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Reno County 21	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Reno County Building Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Reno County 22	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Reno County IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Reno County 23	Provide hazardous materials response training to first responders and emergency management staff.	Hazardous Materials Event	Reno County Emergency Manager	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Reno County 24	Identify and map all structurally deficient bridges.	Infrastructure Failure	Reno County Public Works	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Reno County 25	Conduct active shooter drills and exercises for all county personnel.	Terrorism	Reno County Sheriff's Office	Low	1, 2	Data size dependent	Local budgets	Five years	New
Reno County 26	Purchase and install new epidemiological tracking software.	Transmissible Disease	Reno County Health Department	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Buhler Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Buhler 1	Purchase and install critical facility backup generators.	All hazards	Buhler Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Buhler 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Buhler Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Buhler 3	Institute a tree trimming program near utility lines.	All hazards	Buhler Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Buhler 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Buhler Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Buhler 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Buhler Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Buhler 6	Conduct a personal water use education program.	Drought	Buhler Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Buhler 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Buhler Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Buhler 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Buhler Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Buhler 9	Continue to participate meet requirements of the NFIP.	Flood	Buhler NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Buhler Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Buhler 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Buhler Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Buhler 11	Clean and repair drainage ditches to maintain capacity.	Flood	Buhler Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Buhler 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Buhler Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Buhler 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Buhler Administration	Low	4	Staff Time	Local budgets	Five years	New
Buhler 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Buhler Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Buhler 15	Create defensible space buffers at all critical facilities	Wildfire	Buhler Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Buhler 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Buhler IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Buhler 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Buhler Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

Sylvia Township 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Sylvia Township Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Sylvia Township 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Sylvia Township Administration	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sylvia Township 6	Conduct public education campaign on home seismic retrofits.	Earthquake	Sylvia Township Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Sylvia Township 7	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Sylvia Township Administration	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Sylvia Township 8	Continue to participate meet requirements of the NFIP.	Flood	Sylvia Township Administration	High	1, 2	Staff time	Local budgets	Continuous	On-going
Sylvia Township 9	Clean and repair drainage ditches to maintain capacity.	Flood	Sylvia Township Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding

**Table X: Sylvia Township Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sylvia Township 10	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Sylvia Township Administration	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Sylvia Township 11	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Sylvia Township Administration	Low	4	Staff Time	Local budgets	Five years	New
Sylvia Township 12	Construct community saferooms in select jurisdictional buildings.	Tornado	Sylvia Township Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sylvia Township 13	Create defensible space buffers at all facilities	Wildfire	Sylvia Township Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Sylvia Township 14	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Sylvia Township Administration	Low	1, 2	Data size dependent	Local budgets	Five years	New

**Table X: Walnut Township Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Walnut Township 1	Purchase and install critical facility backup generators.	All hazards	Walnut Township Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Walnut Township 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Walnut Township Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Walnut Township 3	Institute a tree trimming program near utility lines.	All hazards	Walnut Township Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	Carried over due to lack of funding
Walnut Township 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Walnut Township Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Walnut Township 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Walnut Township Administration	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding

Hutchinson Regional Hospital 1	Purchase and install facility backup generators.	All hazards	Hutchinson Regional Hospital Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding
Hutchinson Regional Hospital 2	Upgrade ventilation system throughout hospital	Transmissible disease	Hutchinson Regional Hospital Administration	High	1, 2	\$100,000	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding

**Table X: Arkansas Valley Electric Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Arkansas Valley Electric 1	Purchase and install critical location backup generators.	All hazards	Arkansas Valley Electric Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Arkansas Valley Electric 2	Shorten distance between utility poles.	All hazards	Arkansas Valley Electric Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: MidWest Energy Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
MidWest Energy 1	Purchase and install critical location backup generators.	All hazards	MidWest Energy Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
MidWest Energy 2	Shorten distance between utility poles.	All hazards	MidWest Energy Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Sunflower Electric Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sunflower Electric 1	Purchase and install critical location backup generators.	All hazards	Sunflower Electric Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Sunflower Electric 2	Shorten distance between utility poles.	All hazards	Sunflower Electric Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Drainage District #2 Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Drainage District #2 1	Purchase and install facility backup generators.	All hazards	Drainage District #2 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding
Drainage District #2 2	Replace water lines at critical locations throughout service area.	All hazards	Drainage District #2 Administration	Medium	1,2	\$105.00 an acre	Bric, HMGP, System budget	On going	New

**Table X: Reno County Drainage District #3 Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Reno County Drainage District #3 1	Purchase and install facility backup generators.	All hazards	Reno County Drainage District #3 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding
Reno County Drainage District #3 2	Replace water lines at critical locations throughout service area.	All hazards	Reno County Drainage District #3 Administration	Medium	1,2	\$105.00 an acre	Bric, HMGP, System budget	On going	New

**Table X: Rice County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Rice County 1	Install generators in all county facilities.	All hazards	Rice County Emergency Manager, Rice County Facilities Department	High	1, 3	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Rice County 2	Upgrade and enhance sirens throughout county	All hazards	Rice County Emergency Manager	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of funding
Rice County 3	Purchase electronic mobile traffic notification signs.	All Hazards	Rice County Emergency Manager, Rice County Director of Public Works	Medium	1, 2	\$35,000	HMGP, Local budgets	Five years	New
Rice County 4	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	Rice County Emergency Manager	High	1, 2	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
Rice County 5	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	Rice County Emergency Manager	High	1, 3	Staff Time	Local budgets	Five years	Carried over due to lack of staff
Rice County 6	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	Rice County Emergency Manager	High	1, 2	Staff Time and \$500	Local budgets	Five years	Carried over due to lack of staff
Rice County 7	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	Rice County Emergency Manager, Facilities Department	Low	1, 2	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Rice County 8	Revise building codes to require low water flow toilets and faucets.	Drought	Rice County Administration	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of staff

**Table X: Rice County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Rice County 9	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	Rice County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Rice County 10	Identify and prepare county building for usage as heat/cold shelters.	Extreme Temperatures	Rice County Facilities Department	Low	1, 2	\$2,000 per facility	BRIC, Local budgets	Five years	New
Rice County 11	Continue to participate in, and enforce provisions of, NFIP.	Flood	NFIP Administrator	High	1, 2	Per property cost	Local budgets	On-going	On-going
Rice County 12	Purchase and demolish flood prone properties	Flood	Rice County Emergency Manager, NFIP Administrator	High	1, 2	Per property cost	FMA, HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Rice County 13	Conduct a flood insurance awareness program.	Flood	NFIP Administrator	High	1, 3	Staff Time	Local budgets	Five years	New
Rice County 14	Construct rainwater retention/detention ponds at strategic locations.	Flood	NFIP Administrator, Rice County Public Works	Medium	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Rice County 15	Procure permanent signage to warn of flood hazard areas.	Flood	NFIP Administrator, Rice County Emergency Manager	Medium	1, 2	Location dependent	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Rice County 16	Install surge protectors in all jurisdictional facilities.	Severe Thunderstorms	Rice County Facilities Department	Medium	1, 2	\$10,000 per location	HMGP, BRIC, Local budgets	Five years	New
Rice County 17	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Rice County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New

**Table X: Rice County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Rice County 18	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	Rice County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Rice County 19	Construct snow fences along major transportation routes.	Winter Storm	Rice County Public Works	Low	1, 2	\$25,000 - \$100,000 per location	HMGP, PDM, Local budgets	Ten years	Carried over due to lack of funding
Rice County 20	Insulate water lines in all jurisdictional facilities.	Winter Storm	Rice County Building Department	Low	1, 2	\$10,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Rice County 21	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Rice County Building Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Rice County 22	Purchase cloud storage backup for all electronic records.	Cybersecurity Incident	Rice County IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Rice County 23	Provide hazardous materials response training to first responders and emergency management staff.	Hazardous Materials Event	Rice County Emergency Manager	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Rice County 24	Identify and map all structurally deficient bridges.	Infrastructure Failure	Rice County Public Works	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Rice County 25	Conduct active shooter drills and exercises for all county personnel.	Terrorism	Rice County Sheriff's Office	Low	1, 2	Data size dependent	Local budgets	Five years	New
Rice County 26	Purchase and install new epidemiological tracking software.	Transmissible Disease	Rice County Health Department	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Little River Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Little River 1	Purchase and install critical facility backup generators.	All hazards	Little River Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Little River 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Little River Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Little River 3	Institute a tree trimming program near utility lines.	All hazards	Little River Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Little River 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Little River Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Little River 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Little River Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Little River 6	Conduct a personal water use education program.	Drought	Little River Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Little River 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Little River Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Little River 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Little River Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Little River 9	Continue to participate meet requirements of the NFIP.	Flood	Little River NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Little River Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Little River 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Little River Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Little River 11	Clean and repair drainage ditches to maintain capacity.	Flood	Little River Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Little River 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Little River Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Little River 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Little River Administration	Low	4	Staff Time	Local budgets	Five years	New
Little River 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Little River Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Little River 15	Create defensible space buffers at all critical facilities	Wildfire	Little River Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Little River 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Little River IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Little River 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Little River Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Sterling Mitigation Actions**

Sterling 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Sterling Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: School Name Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
School Name 1	Purchase and install facility backup generators.	All hazards	School Name Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, School Budget	Five years	Carried over due to lack of funding
School Name 2	Construct safe rooms in all school buildings to required standards.	All hazards	School Name Administration	High	1, 2	\$1,000,000 - per location	HMGP, BRIC, School budget	Ten years	New
School Name 3	Conduct hazard mitigation education programs for students.	All hazards	School Name Administration	Medium	1, 2, 3	\$2,000	School Budget	As required	New
School Name 4	Conduct a xeriscaping program for all school facilities	Drought	School Name Administration	Low	1, 2	\$10,000 -per location	HMGP, BRIC, School Budget	Ten years	New
School Name 5	Retrofit school facilities to meet minimum seismic construction standards.	Earthquake	School Name Administration	Low	1, 2	\$30,000 per facility	HMGP, BRIC, School Budget	Five years	New
School Name 6	Construct rainwater gardens adjacent to paved areas.	Flood	School Name Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, School Budget	As required	New
School Name 7	Conduct regular staff and student active shooter trainings.	Terrorism	School Name Administration	High	1, 2, 3	Location and size dependent	HMGP, BRIC, School Budget	As required	New

**Table X: Arkansas Valley Electric Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Arkansas Valley Electric 1	Purchase and install critical location backup generators.	All hazards	Arkansas Valley Electric Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Arkansas Valley Electric 2	Shorten distance between utility poles.	All hazards	Arkansas Valley Electric Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Sunflower Electric Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sunflower Electric 1	Purchase and install critical location backup generators.	All hazards	Sunflower Electric Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Sunflower Electric 2	Shorten distance between utility poles.	All hazards	Sunflower Electric Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Sedgwick County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Sedgwick County 1	Install generators in all county facilities.	All hazards	Sedgwick County Emergency Manager, Sedgwick County Facilities Department	Medium	1	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Ongoing as funding allows.
Sedgwick County 2	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	Sedgwick County Public Works	High	1	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
Sedgwick County 3	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	Sedgwick County Emergency Manager	Medium	1, 3	Staff Time	Local budgets	Five years	New
Sedgwick County 4	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	Sedgwick County Emergency Manager	Medium	1, 3	Staff Time and \$500	Local budgets	Five years	New
Sedgwick County 5	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	Sedgwick County Facilities Department	Low	1	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Sedgwick County 6	Revise building codes to require low water flow toilets and faucets.	Drought	Sedgwick County Administration	High	1	Staff Time	Local budgets	Five years	New
Sedgwick County 7	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	Sedgwick County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	New

**Table X: Sedgwick County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sedgwick County 8	Coordinate with VOADs to validate and maintain shelter list.	Extreme Temperatures	Sedgwick County Facilities Department	Low	2,3	Staff Time	BRIC, Local budgets	Ongoing	New
Sedgwick County 9	Continue to participate in, and enforce provisions of, NFIP.	Flood	NFIP Administrator	High	1, 2	Per property cost	Local budgets	On-going	On-going
Sedgwick County 10	Purchase and demolish flood prone properties	Flood	Sedgwick County Emergency Manager, NFIP Administrator	Low	1, 2	Per property cost	FMA, HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sedgwick County 11	Conduct a flood insurance awareness program.	Flood	NFIP Administrator	High	1, 3	Staff Time	Local budgets	On-going	On-going
Sedgwick County 12	Upgrade/ Improve Storm Water Management systems.	Flood	Sedgwick County Public Works	Medium	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	On-going	New
Sedgwick County 13	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Sedgwick County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Sedgwick County 14	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	Sedgwick County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	New
Sedgwick County 15	Outdoor warning replacement program.	Tornado	Sedgwick County Emergency Manager	High	1, 2	\$2.5 Million	Local budget, capital improvement program	Four years	In Progress
Sedgwick County 16	Construct snow fences along major transportation routes.	Winter Storm	Sedgwick County Public Works	Low	1	\$25,000 - \$100,000 per location	HMGP, PDM, Local budgets	Ten years	New

**Table X: Sedgwick County Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Sedgwick County 17	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Sedgwick County IT Department	Low	2	Data size dependent	Local budgets	Five years	New
Sedgwick County 18	Create and maintain cyber incident response plan	Cybersecurity Incident	Sedgwick County IT Department	High	3,4	Staff Time	Local budgets	Ongoing	New
Sedgwick County 19	Transition to multi-factor authentication	Cybersecurity Incident	Sedgwick County IT Department	Medium	1,2	TBD	Local budgets	TBD	New
Sedgwick County 20	Create and maintain a backup county communications website outside of county domain.	Cybersecurity Incident	Sedgwick County IT Department	High	1,3,4	TBD	Local budgets	TBD	New
Sedgwick County 21	Identify key email addresses, create and maintain alternate email addresses on an outside domain	Cybersecurity Incident	Sedgwick County IT Department	High	1,3,4	TBD	Local budgets	TBD	New
Sedgwick County 22	Identify key telephone numbers to auto forward in the event of a cyber incident	Cybersecurity Incident	Sedgwick County IT Department	High	1,3,4	Staff Time	Local budgets	TBD	New
Sedgwick County 23	Install and upgrade vehicle barriers around critical facilities.	Terrorism	Sedgwick County Facilities Department	Low	1,2	TBD	Local Budget	TBD	New
Sedgwick County 24	Assess internal facility security. Install camera, automatic locks and upgrade barriers as needed	Terrorism	Sedgwick County Facilities Department	Low	2	TBD	Local Budget	TBD	New

Sedgwick County REC 1	Purchase and install critical location backup generators.	All hazards	Sedgwick County REC Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Sedgwick County REC 2	Shorten distance between utility poles.	All hazards	Sedgwick County REC Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Sedgwick County Fire District #1 Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Sedgwick County Fire District #1 1	Purchase and install facility backup generators.	All hazards	Sedgwick County Fire District #1 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Fire budgets	Five years	Carried over due to lack of funding
Sedgwick County Fire District #1 2	Reduce hazardous fuels in prioritized wildfire risk areas.	Wildfire	Sedgwick County Fire District #1 Administration	Medium	1,2	\$105.00 an acre	Federal WUI grant dollars, Fire budget	On going	Carried over due to lack of funding
Sedgwick County Fire District #1 3	Conduct Wildland Urban Interface response training for firefighters.	Wildfire	Sedgwick County Fire District #1 Administration	Medium	1,2,3	\$30 per student per training	Federal WUI grant dollars, Fire budget	On going	New

**Table X: Sumner County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sumner County 1	Install generators in all county facilities.	All hazards	Sumner County Emergency Manager, Sumner County Facilities Department	High	1, 3	\$10,000 to \$50,000 per location	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sumner County 2	Upgrade and enhance sirens throughout county	All hazards	Sumner County Emergency Manager	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of funding
Sumner County 3	Purchase electronic mobile traffic notification signs.	All Hazards	Sumner County Emergency Manager, Sumner County Public Works	Medium	1, 2	\$35,000	HMGP, Local budgets	Five years	New
Sumner County 4	Conduct a regular tree trimming and tree wire installation program.	Severe Storms, Tornado, Winter Storm	Sumner County Emergency Manager	High	1, 2	\$25,000 per occurrence	HMGP, BRIC, Local Budgets	Five years	New
Sumner County 5	Conduct agricultural education program on water reduction methods.	Agricultural Infestation, Drought	Sumner County Emergency Manager	High	1, 3	Staff Time	Local budgets	Five years	Carried over due to lack of staff
Sumner County 6	Mail updated information to all agricultural producers concerning emerging threats.	Agricultural Infestation	Sumner County Emergency Manager	High	1, 2	Staff Time and \$500	Local budgets	Five years	Carried over due to lack of staff
Sumner County 7	Conduct a Xeriscaping program for all jurisdictional owned facilities	Drought	Sumner County Facilities Department	Low	1, 2	\$5,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Sumner County 8	Revise building codes to require low water flow toilets and faucets.	Drought	Sumner County Administration	High	1, 2	Staff Time	Local budgets	Five years	Carried over due to lack of staff

**Table X: Sumner County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sumner County 9	Modernization HVAC systems in jurisdictional facilities.	Extreme Temperatures	Sumner County Facilities Department	Low	1, 2	\$25,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Sumner County 10	Identify and prepare county building for usage as heat/cold shelters.	Extreme Temperatures	Sumner County Facilities Department	Low	1, 2	\$2,000 per facility	BRIC, Local budgets	Five years	New
Sumner County 11	Continue to participate in, and enforce provisions of, NFIP.	Flood	NFIP Administrator	High	1, 2	Per property cost	Local budgets	On-going	On-going
Sumner County 12	Purchase and demolish flood prone properties	Flood	Sumner County Emergency Manager, NFIP Administrator	High	1, 2	Per property cost	FMA, HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sumner County 13	Conduct a flood insurance awareness program.	Flood	NFIP Administrator	High	1, 3	Staff Time	Local budgets	Five years	New
Sumner County 14	Construct rainwater retention/detention ponds at strategic locations.	Flood	NFIP Administrator, Sumner County Public Works	Medium	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sumner County 15	Procure permanent signage to warn of flood hazard areas.	Flood	NFIP Administrator, Sumner County Emergency Manager	Medium	1, 2	Location dependent	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Sumner County 16	Install surge protectors in all jurisdictional facilities.	Severe Thunderstorms	Sumner County Facilities Department	Medium	1, 2	\$10,000 per location	HMGP, BRIC, Local budgets	Five years	New
Sumner County 17	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Sumner County Facilities Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New

**Table X: Sumner County Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Sumner County 18	Construct community safe rooms throughout the county to required building standards	Severe Storms, Tornado	Sumner County Emergency Manager	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sumner County 19	Construct snow fences along major transportation routes.	Winter Storm	Sumner County Public Works	Low	1, 2	\$25,000 - \$100,000 per location	HMGP, PDM, Local budgets	Ten years	Carried over due to lack of funding
Sumner County 20	Insulate water lines in all jurisdictional facilities.	Winter Storm	Sumner County Building Department	Low	1, 2	\$10,000 - \$50,000 per location	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Sumner County 21	Install hail resistant roofing on all jurisdictional facilities.	Severe Thunderstorms	Sumner County Building Department	Medium	1, 2	\$50,000 per location	HMGP, BRIC, Local budgets	Five years	New
Sumner County 22	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Sumner County IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Sumner County 243	Provide hazardous materials response training to first responders and emergency management staff.	Hazardous Materials Event	Sumner County Emergency Manager	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New
Sumner County 24	Identify and map all structurally deficient bridges.	Infrastructure Failure	Sumner County Public Works	Medium	1, 2	\$1,000,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Sumner County 25	Conduct active shooter drills and exercises for all county personnel.	Terrorism	Sumner County Sheriff's Office	Low	1, 2	Data size dependent	Local budgets	Five years	New
Sumner County 26	Purchase and install new epidemiological tracking software.	Transmissible Disease	Sumner County Health Department	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Argonia Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Argonia 1	Purchase and install critical facility backup generators.	All hazards	Argonia Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Argonia 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Argonia Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Argonia 3	Institute a tree trimming program near utility lines.	All hazards	Argonia Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Argonia 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Argonia Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Argonia 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Argonia Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Argonia 6	Conduct a personal water use education program.	Drought	Argonia Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Argonia 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Argonia Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Argonia 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Argonia Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Argonia 9	Continue to participate meet requirements of the NFIP.	Flood	Argonia NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Argonia Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Argonia 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Argonia Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Argonia 11	Clean and repair drainage ditches to maintain capacity.	Flood	Argonia Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Argonia 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Argonia Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Argonia 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Argonia Administration	Low	4	Staff Time	Local budgets	Five years	New
Argonia 14	Construct community shelters in select jurisdictional buildings.	Tornado	Argonia Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Argonia 15	Create defensible space buffers at all critical facilities	Wildfire	Argonia Fire	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Argonia 16	Purchase cloud storage backup for all jurisdictional electronic records.	Cybersecurity Incident	Argonia IT Department	Low	1, 2	Data size dependent	Local budgets	Five years	New
Argonia 17	Provide hazardous materials response training to local first responders.	Hazardous Materials Event	Argonia Fire	High	1, 2	\$500 per trainee	HMGP, Local budgets	As required	New

**Table X: Belle Plaine Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Belle Plaine 1	Purchase and install critical facility backup generators.	All hazards	Belle Plaine Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of funding
Belle Plaine 2	Upgrade warning siren system to expand coverage and capabilities.	All hazards	Belle Plaine Administration	High	1, 2	\$50,000 annually	HMGP, Local budgets	As required	New
Belle Plaine 3	Institute a tree trimming program near utility lines.	All hazards	Belle Plaine Administration	Medium	1, 2	-\$50,000	HMGP, BRIC, Local Budgets	As required	New
Belle Plaine 4	Install evacuation route and high ground signage in any high hazard dam potential inundation areas.	Dam/Levee Failure	Belle Plaine Administration	Medium	1, 2, 4	\$5,000 per location	HMGP, Local budgets	Five years	New
Belle Plaine 5	Conduct a xeriscaping program for all jurisdictional owned facilities	Drought	Belle Plaine Facilities Department	Medium	1, 2	\$5,000 - \$20,000 per facility	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Belle Plaine 6	Conduct a personal water use education program.	Drought	Belle Plaine Administration	Low	3	Staff time	HMGP, BRIC, Local budgets	Five years	Carried over due to lack of staff
Belle Plaine 7	Conduct public education campaign on home seismic retrofits.	Earthquake	Belle Plaine Administration	Low	3	Staff time and \$3,000	HMGP, Local budgets	Five years	Carried over due to lack of staff
Belle Plaine 8	Identify and prepare local facilities to serve as heating/cooling centers.	Extreme Temperatures	Belle Plaine Facilities Department	Medium	1, 2	\$3,000 per facility	HMGP, Local budgets	Five years	Carried over due to lack of staff
Belle Plaine 9	Continue to participate meet requirements of the NFIP.	Flood	Belle Plaine NFIP Coordinator	High	1, 2	Staff time	Local budgets	Continuous	On-going

**Table X: Belle Plaine Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Belle Plaine 10	Construct rainwater retention/detention ponds at strategic locations.	Flood	Belle Plaine Administration	Low	1, 2	Location and size dependent	HMGP, BRIC, Local budgets	As required	Carried over due to lack of funding
Belle Plaine 11	Clean and repair drainage ditches to maintain capacity.	Flood	Belle Plaine Administration	Low	1, 2	Location, length, and size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding
Belle Plaine 12	Install hail and fire-resistant roofing on all jurisdictional facilities.	Severe Thunderstorms, Wildfires	Belle Plaine Facilities Department	Low	1, 2	\$50,000 per location	Facility size dependent	Five years	New
Belle Plaine 13	Conduct public education program for driving in winter conditions.	Severe Winter Weather	Belle Plaine Administration	Low	4	Staff Time	Local budgets	Five years	New
Belle Plaine 14	Construct community saferooms in select jurisdictional buildings.	Tornado	Belle Plaine Administration	High	1, 2	Facility size dependent	HMGP, BRIC, Local budgets	Ten years	Carried over due to lack of funding

Sunflower Electric 2	Shorten distance between utility poles.	All hazards	Sunflower Electric Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: Wheatland Electric Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
Wheatland Electric 1	Purchase and install critical location backup generators.	All hazards	Wheatland Electric Administration	High	1, 2	\$10,000 - \$50,000 per facility	HMGP, BRIC, System budget	Five years	Carried over due to lack of funding
Wheatland Electric 2	Shorten distance between utility poles.	All hazards	Wheatland Electric Administration	Medium	1, 2	Distance and specification dependent	HMGP, System budget	Five years	New

**Table X: RWD #1 Mitigation Actions**

<b>Action Identification</b>	<b>Description</b>	<b>Hazard Addressed</b>	<b>Responsible Party</b>	<b>Overall Priority</b>	<b>Goal(s) Addressed</b>	<b>Estimated Cost</b>	<b>Potential Funding Source</b>	<b>Proposed Completion Timeframe</b>	<b>Status</b>
RWD #1 1	Purchase and install facility backup generators.	All hazards	RWD #1 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding
RWD #1 2	Replace water lines at critical locations throughout service area.	All hazards	RWD #1 Administration	Medium	1,2	Line and distance dependent	BRIC, HMGP, System budget	On going	New

**Table X: RWD #6 Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
RWD #6 1	Purchase and install facility backup generators.	All hazards	RWD #6 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding
RWD #6 2	Replace water lines at critical locations throughout service area.	All hazards	RWD #6 Administration	Medium	1,2	Line and distance dependent	BRIC, HMGP, System budget	On going	New

**Table X: Sumner County Hospital District #1 Mitigation Actions**

Action Identification	Description	Hazard Addressed	Responsible Party	Overall Priority	Goal(s) Addressed	Estimated Cost	Potential Funding Source	Proposed Completion Timeframe	Status
Sumner County Hospital District #1 1	Enhance capacity of facility backup generators.	All hazards	Sumner County Hospital District #1 Administration	High	1, 2	\$25,000 - \$50,000 per facility	HMGP, BRIC, System budgets	Five years	Carried over due to lack of funding
Sumner County Hospital District #1 2	Upgrade ventilation and filtration system.	Infectious Disease	Sumner County Hospital District #1 Administration	Medium	1,2	\$100,000	BRIC, HMGP, System budget	Ten years	New
